RM is delighted to bring you these fine receivers:

http://tinyurl.com/bo2s2

http://tinyurl.com/c5m9j

Guess it's just a coincidence, but both were previously owned by old hams
that couldn't use it with their 486's.

"Bringing you the very best in Ham Radio equipment to e-Bay!!!"

BTW,

Gottahaveit1995 just acquired an Icom R75, can't wait to see it after RM
"cleanses" it.

The feds are not even mandating HD on OTA stations. As far as I can see,
most programming on DTV stations is in low res format (720i?) And I'm not
impressed in the least, analog looks much better (we're stuck with digital
satellite feed for our US/English content, and it looks like total garbage).

Seriously doubt it. We get nothing from N. America here.. least of all
Sackville. We're less than 350 miles from China (just go straight north
through the DPRK), and regularly hear AMBCB from China, and during e-skip
openings have heard FM BCB from Xianghai and points north. (interesting, we
never hear anything from Japan, though, and they're much closer, only about
900 miles from Tokyo, less than 500 from Fukuoka)

6. Leap Second Instant Replay

Newsgroup: rec.radio.shortwave
Date: 2006-01-01 00:26:12 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <43B721B2.1DC5@mindspring.com>
Source record: 56604

http://rhhardin.home.mindspring.com/leapsecond.ram

starting just before 23:58 ending just after 00:01:00

Notice he says ``Coordinated Universal Time'' and after ``Time''
there's a single second empty of clicks

At the end of the 23:59 minute, there's two seconds empty.

(Saves you counting to 60.)

The beep is on the zero second, the the click is omitted for seconds 29
and 59 (and, when there's a leap second, 23:60).

Source record: 56605

Went to a Rite Aid drug store today to get the last of our meds before our
new and deproved insurance plan takes effect.

My wife pointed out a "Fixit Tools" "up to 1,000,000 candle power" rechargeable
hand help spot light. Originally ~$50 and reduced to $9.99. I bought 2 not expecting
too much. Charged them for the 6 hours since we got home and they are fairly bright.

They have a halegon bulb and a 6V 4Amp/Hr gell cell.
Included is a dinky and very RF nasty, wall wart, and a fused male cigerette lighter
cord to allow charging in an automobile. Please note the charger is a 18 ohm ~25W
resistor in series with the +12 input so you can fry a battery if you leave on charge
"forever"

At this price they are worth buying for the battery alone.

Two in series will give you 12V at 4A/HR which will run a SW or scanner, or even a
lap top for over an hour.

If you have a DX398 then a single 6V battery will provide power for many hours.

Enjoy

Terry

10. Vintage Suggestions?

Newsgroup: rec.radio.shortwave
Date: 2006-01-01 01:23:37 UTC
From: Lenny <freilich@pica.army.mil>
Message-ID: <DaednZFYVpyNsireRVn-qg@comcast.com>
Source record: 56607

I'm thinking more and more about the beautiful vintage tube receivers of the past.
I love the purposeful look, the glow of the tubes, and, of course, the performance.
So, I'm looking for suggestions on some of the best tube SW receivers that are readily available on
E Bay and elsewhere.
Specifically, the Collins's, the Hammarlunds, and the Hallicrafters.(Please educate me on the other classic makes)
My price limit is $500 give or take.
Oh, and I know nothing about poking around the insides of these things so I need one in turnkey condition.
Right now, I own an Icom R75 with all the Kiwa mods.
Is it possible that some of the old receivers offer similar performance?
I'm mainly interested in international broadcasts and to a lesser extent, ham and utility monitoring.
So, start recommending.
Thanks, and I hope this can be a fun topic.
Lenny

Source record: 56610

Mike,
Thanks for your comments. When I spoke of "compression" being responsible for the horrid sound of many of today's analogue FM stations, I was speaking of compression in the analogue sense, in other words, dynamic compression where there are no soft passages and no loud passages, everything is the same loud obnoxious level.

As far as your comments on FM IBOC being 96K, I was well aware of that fact. The issue is that the digital compression algorithm that they use is much better than "a 96K MP3" and appears to me to have the audio quality of a 256K MP3 (some harshness due to the "Simpson's Rule" effect, but good enough for automobile listening and background music).

All of my statements were based on empirical listening tests comparing the sound of IBOC in AM and FM mode to AM stereo and analogue FM on a Marantz 10B tuner etc.

As far as your comments on the AM section of the Yamaha RX-V4600, I think that it's a fair to midland AM DX tuner. If you read my statement carefully about the Lansing MI station, I said that the analogue signal comes in with excellent signal (20 to 40 dB over S9 in ham radio terms), but the IBOC "subcarrier" is not detected.

Your comments on the audio quality of AM IBOC disagree with my empirical listening tests though, I still think that the Canadian AM Stereo station CFCO is far superior to any of the 3 IBOC stations that I've heard locally.

In conclusion, I think that AM IBOC is not going to go anywhere and is indeed really pesky in terms of the QRN that it spews out, but that FM IBOC has the promise of success due to the "narrowcasting" that's possible using the alternate channels. Luckily, we here in Detroit are seeing the advantages of FM IBOC with very interesting and appealing "second HD channel" broadcasting by 9 local stations.

I think 720p is a minimum and it's 4x the resolution of NTSC. Going
from 720p to 1080i isn't that much of a difference, though you notice
the difference in a side by side comparison.

Telamon,

The Liberal Political Cadre of the Democrat Party of the USA
originate and post their Of-Topic Political Hit Pieces here on
the RRS Newsgroup and many others.

These Liberal Political Cadres of the New Socialist World :
Generally have some Propaganda HeadLine {Subject Line}
that they want - repeated, Repeated and REPEATED :
Anti-Bush / Anti-USA / Anti-American / Anti-Christian

1. To Not Respond is to Concede the Political Debate to them
so that they feel free to post unchecked and unchallenged like
the little red-guard what-to-bees that each of them is...

2. To Not Respond is to Concede the RRS NewsGroup to them as
"Their Place" to Shove-It-In-Your-Face an Liberal Political Message
of Lies and Distortions - The Vicious Verbal Act of a Political Bully
and to suffer the Intimidation of the Left-Wing Radicals.

3. Act of Freedom-and-Truth Number One - Change the HeadLine
{Subject Line} to Reflect the Truth About America as You-See-It :
+ Stand-Up for America and Our USA Government
+ Stand-Up for Our Troops and the War-on-Terror
+ Stand-Up for Your Fellow American Citizens and Their Rights
+ Stand-Up for Christianity and Persons-of-Faith

4. Act of Freedom-and-Truth Number Two - Present the Facts
{Message Text} to Reflect the All American Truths as You-See-It :
+ Defend America and Our USA Government
+ Defend Our Troops and the War-on-Terror
+ Defend Your Fellow American Citizens and Their Rights
+ Defend Christianity and Persons-of-Faith

5. Act of Freedom-and-Truth Number Three - Promote the Good
and Positive Things that Make America Great as You-See-It :
+ How Good America and Our USA Government is...
+ The Good Job Our Troops are doing in the War-on-Terror
+ How Wonderful Freedoms and Rights of Your Fellow
American Citizens are...
+ The Natural Goodness of Christians and Persons-of-Faith

The Propaganda War for the Hearts and Minds of the American People
is being Fought Everyday in Every Forum by the Democrat Party of the
USA; and they alias the Liberal Elitist in the Mass Media; and their

what-to-be Political Cadre right here in the RRS NewsGroup.

Telamon - It-Is-The-American-Way - Each of Us Needs-to-Be a
Citizen Soldier of America in the Fight for of Freedom-and-Truth !

Concede Nothing To The Liberals :
- Fight For Your American Freedoms and Rights
To Be Who You Are :
- Be Happy To Be An American !
- Be Honored To Stand-Up For America !
- Be Proud To Say : I Am An American !
- Be Rejoiceful In Your Personal Beliefs and Faith !
God {Allah} Bless America and All Americans - Amen.

so... as I say - so do i do ~ RHF

I hadn't realized you weren't in the US.

As you probably know, any shortwave broadcast in English (excluding the Brits and former colonies) is often meant as propaganda, though not necessarily lies, but more like somebody with an agenda.

You're right, of course. I sent a too hasty response to LMFAceO when I interpreted his posting as saying that the great distance was responsible for the 'apparent' stationary state.

My apologies.

==========
The orbital velocity of the satellite depends on its altitude above Earth. The nearer Earth, the faster the required orbital velocity. At an altitude of 124 miles (200 kilometers), the required orbital velocity is just over 17,000 mph (about 27,400 kph). To maintain an orbit that is 22,223 miles (35,786 km) above Earth, the satellite must orbit at a speed of about 7,000 mph (11,300 kph). That orbital speed and distance permits the satellite to make one revolution in 24 hours. Since Earth also rotates once in 24 hours, a satellite at 22,223 miles altitude stays in a fixed position relative to a point on Earth's surface. Because the satellite stays right over the same spot all the time, this kind of orbit is called "geostationary."

Yes, they did revert to a very strangled English after I sent the post.

dxAce wrote:
Transmitter is in South Africa, program is announced as coming from
Washington, DC.

I wonder about that as the program content seemed clandestine/pirate and all the states down around here are very friendly with President Obasanjo of Nigeria, so I really wonder at the TX site being in South Africa or any other Southern African state. South Africa has a highly regulated broadcast environment and any pirates are soon detected and shut down.

Also the U.S. government is friendly towards Nigeria and I question whether the U.S. would officially sponsor anti-Nigerian broadcasts.

dxAce, where did you get this info on the TX site?

May be 4x the resolution of a VHS VCR (but not even quite that, at SP speed most get 270 lines), but not quite twice what regular broadcast NTSC resolution is. And NTSC STILL looks better because there's no artifacting in it, and no pixelization. Our satellite feed is so bad you can see artifacts in it every time there is a rapid pan or sweep, and when you have color gradients, you can see large amounts of pixelization in the transitions. I'll keep my analog, thanks, even if that means never watching OTA TV again.

Handy Shortwave Chart
Bill McFadden
billmc@agora.rdrop.com

Band allocations and time zone conversions for the USA. Includes broadcast bands used outside the USA. Also includes WARC-92 broadcast band extensions, which may be used before April 1, 2007 on a secondary (non-interference) basis. For multi-use bands, most common usage is shown. Some stations operate outside the official bands. Information is from Sep 2000 NTIA allocations table, see:
http://www.ntia.doc.gov/osmhome/allochrt.html

Frequencies are in kHz. Usual spacing in shortwave broadcast bands is 5 kHz. Frequencies above 10000 kHz tend to propagate better during the day; frequencies below 10000 kHz tend to propagate better at night.

Please e-mail suggestions and corrections to billmc@agora.rdrop.com.

Phone line as SW antenna
Bill McFadden
billmc@agora.rdrop.com

Changes preceded by "|".

WARNINGS AND DISCLAIMERS

Connecting unapproved devices to phone lines may be illegal in your area. Telephone lines present a potential shock hazard. Do not use this antenna for transmitting. Use at your own risk.

INTRODUCTION

This article describes how to use a phone line as a shortwave receiving antenna. Performance will vary depending on the kind of phone line you have. Overhead lines usually make okay antennas, while underground lines usually don't. A phone line antenna will generally pick up more power line noise than a dedicated antenna, so don't expect to use it for DX work. Nevertheless, I find that it outperforms the telescopic whip antennas built into most portables.

A reader sent in this suggestion: If you're concerned about connecting the phone line directly to the receiver, try wrapping the phone cord several times around the receiver's telescopic whip antenna instead. Performance may not be as good as a direct connection, but it will probably be better than the whip antenna by itself.

Someone else wrote asking about lightning protection. I haven't thought much about it because thunderstorms are rare in my area. Most phone lines have lightning arrestors on them where they enter the house, but the lightning arrestors may pass enough energy during a lightning strike damage a receiver. My suggestion is to disconnect the antenna when not in use if you experience frequent thunderstorms.

HOW TO DO IT

The simplest connection is a single capacitor between the phone line and receiver. The capacitor eliminates all phone line voltages, including ringing, so that they will not harm the receiver.

```
Phone line RF connector
red .01 uF center cond. / \
or o--------||-----------------------------|-o | To receiver
green \ /
50 ohm coax |
ground |
or o-----------------------------------------+
N.C. shield
```

N.C. = no connect. I originally connected the phone line ground (yellow wire) to this terminal, but reception was better without it (if you do this, play it safe and put a .01 uF capacitor in series). If another ground is available, you can connect it to this terminal.

If you are picking up local AM or FM radio stations on the shortwave bands, it is likely that your receiver is overloaded. Inexpensive and portable receivers usually lack the filtering needed to eliminate this interference, but you can make your own filters. Filters can also be purchased from some shortwave dealers.

A high-pass filter can be used to remove signals below the shortwave bands. It rejects interference from local AM stations and presents a high impedance to the phone line at audio frequencies so that the phone line remains balanced.

A low-pass filter can be used to remove signals above the shortwave bands. It rejects interference from FM and TV stations, as well as VHF 2-way radio transmitters. If you use both filters, connect the output of the first filter to the input of the second (don't forget to connect their ground terminals together). It doesn't matter which filter is connected first.

By the way, these filters also work well with random wire antennas. Just connect the antenna in place of the phone line.

The filter(s) should be connected to the phone line in this manner:

```
Phone line RF connector
red -------- center cond. / \
or o----| |-------------------------|-o | To receiver
green | | \ /
| FILTER | 50 ohm coax |
ground | | |
or o----| |----------------------------+
N.C. -------- shield
```

FILTER PLANS

The original credit for the high-pass and low-pass filters goes to Paul Blumstein and John Shalamskas, respectively. Edited versions of their articles are included here:

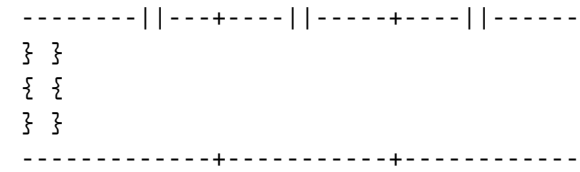
Date: 09 Jan 91 00:54:08 GMT
From: paulb@harley.TTI.COM (Paul Blumstein)

Subject: BC Band Hi-Pass Filter

The following ascii-schematic diagram is a high pass filter that will filter out Broadcast Band (MW) stations. I found it a great boon to my shortwave listening since local MW stations overload my ATS-803A front end & appear in SW, especially with a long antenna.

If you remember my antenna saga, I went from 50 feet to 150 feet & had overload problems causing me to cut back to 50 feet. (Even at 50 feet, I still have some MW interference). I took the advice of Gary Coffman and looked up filters in the ARRL Handbook. With the filter in place, I intend to try to increase my antenna length again.

Anywho, here is the filter, for interested parties.



The outer capacitors are 1500 pf ceramic disks.
The inner capacitor is 820 pf ceramic disk.
The squiggly things are coils (two total). Each one is 2.7 uh.
(a close value will do).

Date: 12 Jan 91 00:44:25 GMT
From: bill@videovax.tv.tek.com (William K. McFadden)
Subject: Re: BC Band Hi-Pass Filter

I built the filter that Paul Blumstein posted recently and measured it on a gain-phase analyzer. Here are its characteristics:

100 kHz -120dB
500 kHz -68dB
1000 kHz -38dB
1600 kHz -15dB
2100 kHz -3dB

The source and load impedances were 50 ohms. Because the filter has five elements, the attenuation is 30dB per octave. The measurements confirmed this.

This filter seems to be a good compromise between interference attenuation and passband response. There is very little attenuation in the 120m band and above. It could use a little more attenuation at the upper end of MW, which could be done with more stages or a higher cutoff frequency. Alternatively, you could build two of these filters and put them in series. (Since two 1500pF capacitors in series are really 750pF, you could eliminate one cap.)

Just for fun, I put 470 ohms in series with the input to see how the filter performed with an antenna mismatch. The response was:

100 kHz -105dB
500 kHz -60dB
1000 kHz -35dB
1600 kHz -15dB
2300 kHz -3dB

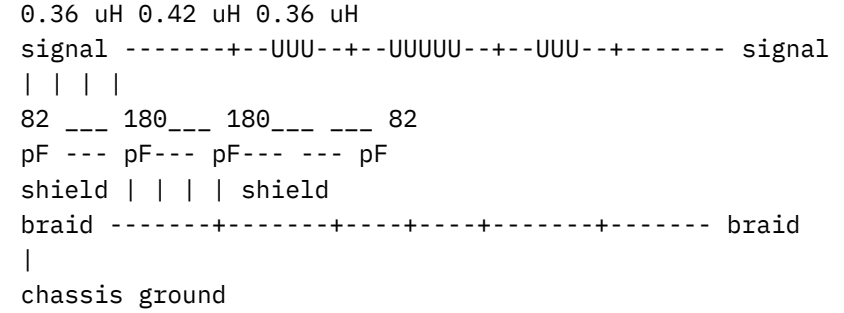
These figures are normalized to the passband response of -15dB, which is due to the impedance mismatch between the source and load and would have been there without the filter. Hence, the filter works almost as well in spite of the mismatch, which is good news to those who use long-wire antennas.

Date: 22 Apr 92 08:59:33 GMT
From: johns@uhunix.uhcc.Hawaii.Edu (John Shalamskas)
Subject: Construction of filters for SW reception

Several people have asked for construction details of the filters I built for my DX-440.

The high-pass filter helped some, but in my location the VHF/UHF broadcasters are also causing problems. So, I dug out the ARRL handbook and chose a 7-element Chebyshev low-pass design that is -3 dB at 35 MHz, -20 dB at 43 MHz, and -50 dB at 64 MHz (all calculated; it works well in practice!)

LOW-PASS FILTER (Rejects FM, TV, etc.)



I had to do a little more improvising at this point. I used .33 uH instead of .36, and .66 uH instead of .42, but it works fine.

The 5-lug terminal strips were perfect for these circuits, since there are 4 lugs plus a grounded lug. All "ground" connections go to the lug that is mounted to the chassis, and the other 4 lugs are used for each of the connections on the signal line. One terminal strip is used per filter. Since both filters were necessary to clean up the hash, I am going to put them both into one box when I get the time.

The proper way to connect them is in series, i.e.

signal in ------- filter 1 -------- filter 2 -------- signal out

There is no difference between ends. They are "bilateral" which means you can't possibly hook them up backwards. (In the above schematics, left and right ends are interchangeable.)

COIL WINDING

You can make the coils yourself using this formula:

L = 0.2 * B^2 * N^2 / (3B + 9A + 10C)

L is the inductance, in uH
A is the length of the coil, in inches
B is the mean diameter of the coil, in inches
C is the diameter of the wire, in inches
N is the number of turns

For small wire, you can assume C = 0.

PARTS SOURCE

All of the parts for the filters can be obtained from the following source:

Digi-Key
http://www.digi-key.com/
701 Brooks Av S
P.O. Box 677
Thief River Falls, MN 56701-0677 USA
Voice: 800-344-4539
FAX: 218-681-3380

PART DIGI-KEY PART NO.
82 pF capacitor P4023
180 pF capacitor P4027
820 pF capacitor P4184
1500 pF capacitor P4187
0.33 uH inductor M8007
0.39 uH inductor M8008
2.7 uH inductor M8018

The cost of these parts is less than $1 each.

It also depends on the mass of the planet but not it's diameter. If the earth had it's current size and rotational rate but was more or less massive (density) ,the geostationary altitude would be higher or lower respectively.

38. AND STILL THE CRIES OF THE CHILDREN GO UNHEARD

Newsgroup: rec.radio.shortwave
Date: 2006-01-01 12:36:36 UTC
From: DRA <D-R-A@telus.net>
Message-ID: <1136118996.528555.126490@z14g2000cwz.googlegroups.com>
Source record: 56637

The DRA is posting this message to remind all people in 2006:

The danger indifference creates, is much worse than the problem it's supporters are trying to avoid.

AND STILL THE CRIES OF THE CHILDREN GO UNHEARD
By Libbi Armati
Western Australia

somewhere out there a born again fanatical egomaniac proclaims that the way to peace in the world is to bomb the daylights out of all those who do
not share his view of the world

somewhere out there the same self-proclaimed messiah vows to go to the ends of the earth to find those who are spoiling his party

somewhere out there a child lies screaming in the open fields after walking on a land mine whilst searching for his parents

somewhere out there a maniac laces the waters of the Mississippi with a newly formed bacteria which he cultivated in his toolshed

somewhere out there another would-be assassin decides it is time to do away with those whose sexual orientation is not one he proscribes as suitable

somewhere out there the hooded beast stalks the streets hellbent on destroying all evidence that anyone but white skinned people ever inhabited this planet

and still the cries of the children go unheard

somewhere out there a disenfranchised woman with no means of support is once again pummeled with blows to her body which leave her crippled

somewhere out there a man pleads it was self-defence

somewhere out there the cathedral bells ring out with the sighs of all those souls who have been sacrificed on the cross of lies and deception

somewhere out there the pulpits still resound with the words "Father forgive them, they know not what they have done"

somewhere out there many sodden footed civilians pray to a god they have never met but believe will save them from the marauding enemy with metal birds in the sky

somewhere out there pre-programmed soldiers search endlessly for
someone to blame in order to secure their pensions into eternity

somewhere out there a corrupt government protects its friends and
further lines its pockets with the blood of the dying

somewhere out there a child fires bullets into the heart of his father
with a gun purchased to protect the family

and still the cries of the children go unheard

somewhere out there a mind-controlled mass of mediocrity massages the
egos of the non elected in a bid to secure their place in history

somewhere out there another child lies dying in the street whilst men
in jack boots stomp on his head and pretend they did not see him

somewhere out there a herd of wild horses rushes through the main
street led by a man swathed in a flag proclaiming that he has all the
answers

somewhere out there a band of merry men singing hymns to their version
of the truth once more assert their right to make decisions for the
world

somewhere out there amidst the cries of "foul play" another group is
incarcerated and left to rot in the prisons of hell made possible by
our tax dollars

somewhere out there the chants for peace are shouted down by one voice
which says "I am the way, the truth and the life" but it is not Jesus
speaking

and still the cries of the children go unheard

somewhere out there in the deep reaches of space a chorus of angels
sings but no-one hears

somewhere out there the souls who have died cry for mercy and
compassion

somewhere out there the wounded child says "all you need is love"

somewhere out there the battered mother says "love thy neighbour"

somewhere out there the bruised warrior says "god bless me"

somewhere out there the heroic dissenter says "love thy enemy"

somewhere out there the tired and pathetic waif says "peace on earth"

and still the cries of the children go unheard

somewhere out there the rest of the world waits and wonders what they
did to deserve this misuse of power and war-mongering to make a few
rich and
the rest either poor or dead

somewhere out there another needle is given to make another person of difference merge into the scenery of the established white washed vision of the world

somewhere out there the crippled hospital victim remembers a time when he could walk and talk and love and dream

somewhere out there the piercing screams of the dying are accompanied by shouts of victory from the mouths of those who issued the death warrant

and still the cries of the children go unheard

BDK - you must be new here. (Welcome).

The Radio-Mart scam is well-known to most regulars of this newsgroup. Most
of us have him filtered out of our eBay searches.

EiBi http://www.susi-und-strolch.de/eibi/bc-b05.txt and also shown on the BDXC 'Africa on Shortwave' page under Nigeria, http://www.bdxc.org.uk/

Additionally, it's not necessarily the US Government that is producing the program. Washington is merely the location of the group producing the program. Address and contact info is shown on the BDXC mentioned above.

This was found in another newsgroup:

==========

New York Magazine ran a competition in which contestants were asked to take a well-known expression in another language, change a single letter and provide a definition for the new expression.

Here are the responses:

HARLEZ-VOUS FRANCAIS? - Can you drive a French motorcycle?
IDIOS AMIGOS - We're wild and crazy guys!
VENI, VIPI, VICI - I came, I'm a very important person, I conquered.
COGITO, EGGO SUM - I think; therefore I am a waffle.
RIGOR MORRIS - The cat is dead.
RESPONDEZ S'IL VOUS PLAID - Honk if you're Scottish.
QUE SERA SERF - Life is feudal.
LE ROI EST MORT. JIVE LE ROI - The king is dead. No kidding.
POSH MORTEM - Death styles of the rich and famous.
PRO BOZO PUBLICO - Support your local clown.
MONAGE A TROIS - I am three years old.
FELIX NAVIDAD - Our cat has a boat.
HASTE CUISINE - Fast French food
VENI, VIDI, VICE - I came, I saw, I partied.
QUIP PRO QUO - A fast retort
MAZEL TON - Tons of luck
APRES MOE LE DELUGE - Larry and Curly got wet.
PORTE-KOCHERE - Sacramental wine
ICH LIEBE RICH - I'm really crazy about having dough.
FUI GENERIS - What's mine is mine.
VISA LA FRANCE - Don't leave your chateau without it.
CA VA SANS DIRT - And that's not gossip.
MERCI RIEN - Thanks for nothing!
AMICUS PURIAE - A Platonic friend
L'ETAT, C'EST MOO - I'm bossy around here.
COGITO, ERGO SPUD - I think, therefore I Yam.
MARCI BEAUCOUP - Marci has just been sick!

Seems as though he did have one up fairly recently where he did state that it was restored by Chuck Rippell. Perhaps it really
wasn't and he got caught on that and is now listing it as not having been done by him?

Never trust Radio-Mart's descriptions.

There is no scam. Radio Mart is a legetimate e-Bay reseller
of refurbished ham radio equipment and accessories. There is
no difference between how Radio Mart does business and
other retailers like HRO, AES and others.

The problem here lies with a few usenet knuckleheads and cheap bastard
hams who pontificate about all so much 'sour grapes' over them.
(most or all of em' being ex-hamfest dealers who just don't like e-Bay!)

Something, in perspective, so common of the minority of cheap
ham radio op's we all used to see at the hamfests years ago.
The hams that used to walking around in dirty 10 year old clothes who
never had a good word for anything or anybody so they cast
their bile on that which they could or would not simply walk away from
because the radio on the table was "too expensive" for them. In short
it's cheap-assed cranky old men who act like spoiled 8-year-olds.

If they don't like Radio-Mart you'd think they'd just go buy new
stuff at HRO and AES. R-M has to be doing something right as
it appears each and every auction they put up ends with someone
bidding on something. I say more power to them, and if someone don't
like how they do business, they can go down the street to the next corner
Deli on the block and get a pastrami-on-rye from them instead.

Yes. The attraction to the planet must be exactly counterbalanced
without having to expend fuel to allow it (in either an outward or
inward path), so the distance out and therefore the forward velocity
would vary with the mass.

We've neglected one very important point here. The rate of rotation of
the planet.

They love me because of the money they've stolen out of my wallet. It's their employees that they seem to hate. There is a perpetual 'Help Wanted' sign at the local UPS warehouse. I've heard that's true almost everywhere they operate. The high staff turnover saves them money by not having to pay out permanent staff perks. A high turnover rate among the employees would certainly contribute to a lack of morale. That also leads to the munchkins playing soccer with the parcels.

Picked up a strong signal last nite in the 49 meter band that stated they were China Radio International Beijing; they were broadcasting in English; they abruptly stopped broadcasting at 06:00 UT; anyone know what frequency it might have been, or can point me at a source of info?

It could be taken one of three ways, any one of which is still depraved.

Using that particular word to 'dxescribe' one's own backside is the mark
of a true reprobate and you know it.

When I used to work at that auto/truck/lawn mower battery factory (the factory first started up in 1961,it closed down a few years ago) in Florence,Mississippi,sometimes I would put a book in my lunch box to read on our half hour meal breaks in the lunch room,uh huh.One of those hard back books I read back in the 1980's was about Satellites in orbit and what those Satellites are capable of doing.(y'all would be Amazed!,simply Amazed!) Consider modern day Satellites nowdays and the future of much more modern Satellites in Orbit around this Rock called Planet Earth we live on and future generations of people will be living on.
You can run,but you aint gonna hide!

CO2 and Global Mean Temperature track together. There is more CO2 in
the atmosphere than at any time in 650,000 years.

There is a God. His name is Dave.

It would be a net increase in commerce over the long term. We could
have done an energy Manhattan Project then sold the technology to the
rest of the world. Instead, we let Texas oil men seal our fates.

Why? Because we are cowards and pussies and unwilling to sacrifice in
the short term for the sake of the long term. Bad bargain.

Lenny,

7 years ago I got rid of all my newer "state of the art" stuff. You are right on the mark!---the lowly, maligned tube gear is a lot more fun to use. What I didn't know until I seriously started using 35 year old receivers was that performance was JUST AS GOOD as the newer stuff. As I see it, the only thing you lose is the digital readout of frequency and to anyone who ever learned how to use a slide rule in 7th grade, THAT should not be an issue.
A few years back, in the IEEE Spectrum Magazine they ran a wonderful article titled, "Tubes Versus Transistors" in which, from an electrical engineering standpoint, clinically compared the two. The result? Tubes provided better audio.
Anyway, there are several receivers I have bought and sold over the past 40 years. At one time I have just about owned every general coverage receiver made by Hallicrafters, Hammarlund, Collins, National, RME, newer companies like Drake and some of the kit companies like Heath, Knight and Lafayette (although Hallicrafters did produce kits on some of their products).
The GENERAL COVERAGE receivers that I keep going back to and buying again are: National NC-183 or NC-183D, Hallicrafters SX-42 and any Collins gear with the model number starting with "51" (51S1, 51J, 51J3). A very close second place is the Hammarlund HQ-180, HQ-180A or HQ-180AC and Hallicrafters SX-100.
Obviously these are only my subjective opinions. Good luck!

P.S.

I have also owned the military R-390/A. While an excellent receiver ,
I found cranking on the heavy tuning dial (which moves a complex Rube
Goldberg mechanical assembly) too cumbersome for serious DXing. It's more of
a "sittin'" receiver and not a "tune-in'" receiver.

Ebay is a toothless tiger and ever since that hag took over running it, it has deteriorated. I'm for buying and selling elsewhere. They COULD police things if they wanted but they want to be "all things to all people" and won't take any stand to protect buyers OR sellers...their myopic mission is to keep money rolling in and to hell with what their users put up with. Their "Security" initiatives are a joke. Ebay is imploding and I think we will see them either sold or out of business entirely in a couple years. Yahoo auctions, although small by eBay standards here in the US are larger than eBay already in Japan.

I glanced through the keywords list briefly and I am not so sure that I
can take a list that has "Bugs Bunny" and "AOL" grouped with
"assassination" and "body armour".

Yahoo had the market in Japan quite a while before ebay ever came to the scene there. I'm registered there and have purchased a couple of items. In the US it seems Yahoo Auctions is doing the slow implosion, along with countless other ebay wannabees who have fired and missed.

People naturally want to sell their stuff where there is the highest volume of viewers regardless of what site it is. I can understand people getting into a tiff over fees and screwups and marching off to the The Number Two Auction Site. But that will neither kill off the big bear nor will it enhance Number Two. In fact, I didn't realize Yahoo(US) was still doing auctions until just recently when someone mentioned it. I haven't checked their offerings in years, literally. It gained a reputation years ago as being a place for sellers who were thrown off of ebay. Thats probably where this 'alisher' guy will show up next and I imagine they neither will refund bidders who get scammed.

Just my 2 cents worth, with no added handling fees.

>
>
>Hi Lenny,
Put the Drake R-4 line on your list (R-4/R-4B/R-4C). Five nice advantages
of the Drake 4 line over the Hallicrafters and Hammarlund:
1. Calibration/resolution is the same on each band- easy to resolve 1 KHz.
On the Hally and Hammarlund, they have decent enough resolution on the 80
(maybe each 5KHz) , but by the time you get to 15 and 10M, it's a
guesstimate.
2. The ultimate in passband tuning
3. Multiple crystal filter options
4. An optional NB that actually works.
5. They're small compared to many of the true boatanchors
73,

Dale W4OP

Downside is you will have to buy xtals for the SW bands you want to listen
to

Radio-Mart(RM) is a deceptive seller that has cause more than a few
buyers to get negative feedback. I like how the R390A he sells is
Collins "designed", which is not the same as Collins built.

If Radio-Mart(RM) was an honest broker, then there would be no need for
the private sales.

I often see items for sale from Radio-Mart(RM) that I want, but I won't
buy from Mr. Red Velvet. Just wait a bit longer and a better deal will
show up on ebay. There is no need to deal with Radio-Mart(RM).

I guesstimate there are thousnds,perhaps a million or more,people
selling things on ebay,full time 24/7.To patrol and police all of them
people would be quite a task,I think.Only if enough people whom have
been ripped off by a certain seller,or certain sellers,on ebay would any
action ever be taken.Anyway,I tend to stay away from ebay.

Hi dxAce, that's very interesting.
I'm going to check it out with Sentech on Tuesday (tomorrow's a public holiday "Tweede Nuwe Yaar" [second new year - we take the new year very seriously down here]).

Because I still can't believe that our pro Abasanjo government would lease a major 250 KW Meyerton TX to slough him off.
(The Meyerton TX's are government owned and controlled)

http://pages.ebay.com/university/
A real estate agent only works for the seller. Ebay is no different.
They encourage crap like Radio-Mart(RM). Buy stuff from ebay (we make
money), do a fancy ad (red velvet), peddle on ebay (we make money).
Keep the transactions private so nobody can see what you are doing.

Often new items sell for more on ebay than on-line prices, especially
if you use the price comparison website like pricescan.com,
pricewatch.com, shopper.com, etc. Ebay is great if you want to buy
something no longer manufactured, or a model from two years ago.

Craigslist, though owned by ebay, is a good alternative. The items are
local. You make the deal in person, so you see what you get. The same
for flea markets, though they are becoming the source of stuff that is
too beat up to sell on ebay.

The "private" sales stem from many folks here contacting his bidders warning them about his supposed questionable character. One or two folks here found his online auctions and started calling him a crook, then many more folks who have never had a single dealing with him joined the bandwagon. Radio-Mart isn't doing anything different than the normal used gear seller... he just doesn't hide his practices as well. Millions of salespeople use these tactics all day long. If true problems develop Ebay will pull his registered status or kick him off, but he's far from being that bad. The situation concerns him, his buyers, and Ebay... everyone else is either jealous, enjoys causing trouble, or can't afford his stuff. If you don't like his practices, then don't bid.

Cuhulin,

Why these eBay Sellers could be more Dangerous than . . .
Hand Guns Owners ;-)

Maybe We Need To Register eBay Sellers (Tax Them) for the
Public Buying Safety and Provide Free Access to eBay for
Everyone in America. {Free Government Computers and
High Speed Internet Access to the Poor and Needy.}

Why Didn't Al Gore Invent eBay as a Free and Open {Democratic}
Market Place for the World ? - Why I Sure that Al 'thought' He
Thought-It-Up while Thinking about the Great Things He Thinks-Up.

And wasn't it John 'ff' Kerry that said : I was for eBay . . .
Before I was Against eBay ! - Now let me expalin myself.

Think of the Peace-of-Mind Knowing that You are Buying from
a Federally Licensed eBay Seller and now Paying 15% More
in Hidden Taxes for the Freedom of a Legalized Market Place.

oh the joys of ebay these holidays ~ RHF

I really wouldn't recommend the R-4C for SWBC use, the R-4B would be the
preferred of the three. And, the R-4 and R-4B DO NOT have a choice in crystal

filter options, also, the noise blanker is standard in the R-4 and R4-B.

It's my understanding that his feedback would be much lower except that he tells the buyers that if they leave a negative for him,
he'll leave a negative for them, many don't want the negative and post NO feedback at all.

Well, if you've followed him at all you'd see pretty quickly just how deceptive he can be! So, perhaps the 3500 have been duped and
just don't realize it because they themselves are not quite as aware as many of us are.

Once again, NEVER trust Radio-Mart's descriptions.

Hi Lisa and happy New Year!

Try this page. They also have a updated
schedule you can download that is update frequently. I mean they update it
when any new frequency changes or comes out.

http://www.susi-und-strolch.de/eibi/bc-b05.txt

And this is their main page which will help YOU I.D. EVERYTHING OUT THERE.
You can download the above list from the top of their main page. Look,
you'll see it.

http://www.eibi.de.vu/

If this doesn't do it, I don't know what will be as accurate as this site
will be.

He ripped me off for a radio by telling me it's "like brand new" and has the
latest serial number he'd ever come across.
Like it's the newest he'd ever seen in all his days of DX'ing.

Mean while the notch control was BROKEN and the serial number was so old, it
was made years ago when they first came out. Is that enough for you?

a little something from RM:
"Radio-Mart also reserves the right to ban/remove ANY bid(s) from ANY
individual for ANY reason. We do keep a Blocked Bidders list for ALL non
paying bidders as well as trouble makers.

This is all done primarily to protect me from the people who buy working
equipment, then remove parts and want to send it back to me as non-working
and expect a refund.

Why Private? Well several winning bidders each week were being contacted
after the sale ended and offered similar items by fraudulent sellers, to
stop this practice, I decided to implement this feature so as to protect
the identity of all bidders, not even I see who won until after the sale
and I certainly cannot see who else had bid except for the winning bidder.

As I describe my items to the best of my ability, you can certainly bid with
confidence as I have over 5,700 positive feedbacks, My descriptions are
based on over 10 years of experience in the Ham Radio, sales field and I
have seen the best and the worst so my descriptions are based on my
experience."

interesting that.....

I think it is interesting that you bring up a similar point about
digital video that I have been expousing about radio digital audio.

It's all about trying to cram a digital signal bandwidth and digitized
signal resolution in an analog spectrum space. This not unlike trying to
put a square peg in a round hole. You can do it but the results are not
pretty.

Dear Lenny,

This is indeed a "fun" topic and I find all the comments posted thus far to be very interesting and enjoyable to read.

Therefore, I hope that you and everyone ese here, will take my comments in the spirit in which they're meant.

Back when I was in high school (three weeks after they had invented fire!?!) there were several of us who got involved in shortwave listening. One fellow had a National SW-54 (as I remember), another had a Hammarlund HQ-100, another had a Blaupunkt, another had a Grundig, one particularly wealthy fellow had a Zenith Trans-Oceanic (a tube model), and I, being the "poorest," had an old Philco console. (But I had the best antenna and ground!)

Later, after high school, I was able to save up enough money to buy a Lafayette HE-10, a Lafayette HE-11 speaker, and a pair of Clevite Brush BA-200 headphones. Total price was $102.60 (and NO sales tax at the time!). I still have them all and they are still in superb condition - they work as well as they did when new. (I had the receiver last aligned and tested about fifteen years ago. The technician stated at the time that, while he made some adjustments, they were all very minor and the internals were really in very fine shape.)

I used that set as my main receiver up until 2000 when I got a Grundig Satellit 800. In 2004 I purchased my AOR AR7030 Plus, which was customized by the factory.

I have to tell you that, though I still "trot out" the Lafayette once or twice a year (for old-times' sake) and though I never had a great deal of experience with most of the better tube shortwave sets (I did have an acquaintance later on who owned a Hammarlund HQ-180A which I listened to quite a bit until he moved away), there is ABSOLUTELY NO WAY I would ever go back to those tube sets for daily use.

For collection purposes, for impressive "looks," and for "cachet," they can't be beat. But NONE of them can even approach the performance of my AR7030 Plus and that includes sound quality. I run my AOR through my Hafler DH-101 Preamplifier and my Hafler DH-200 Power Amplifier into my Klipschorn speakers and, as the man said, "you ain't heard nothing yet!"

Even with my cheap ($29.95) Radio Shack RCA-labeled external speaker, which I use when listening to news or talk programs, the sound is far better and far more intelligible than that of my Lafayette or any other tube radio I have ever heard.

I hate to "bust" anybody's bubble, and please note that I have the greatest respect for others' serious opinions which may differ from mine, but it is my firm opinion that today's shortwave receivers are far, far better than anything I could have bought, regardless of price, back in 1958.

They're far more reliable too. You younger guys can't remember a time when the radio/tv repairman was like a member of the family. He came to your house more often than your favorite uncle!

I often wish that I could have a "time machine" and take one of today's radios back to that young kid who was just starting out in shortwave back in 1958. He'd have been absolutely astounded!

But I do agree with those who state that those radios looked better than today's and their tuning knobs, heavily fly-weighted, were far more pleasurable to use than todays "lightweights."

However, nostalgia aside, they just don't perform like today's!

Best,

Joe (Opinionated but Lovable)

Source record: 56791

I was over at my old buddy and his wifes home yesterday afternoon.He gives me my freebie haircuts,but he doesn't trust me enough to cut his hair,(good thinking,Ronnie) He owns a big General Electric AM wooden cabinet Radio that also has two Shortwave bands on the radio.I wrote them down on a piece of paper.The Shortwave band at the top of the radio ranges from 2.7 to 22 Megacycles and the middle AM band ranges from 55 to 170 Kilocycles and the Shortwave band below that ranges from 2.5 to 7.0 Megacycles.The radio belonged to his grandmother and understandably,he will not get rid of the radio because of sentimental reasons.The radio is sitting on top of one of the shelves in his garage and what with the old Railroad thingys he collects,it wasen't convenient to turn the radio around to see what model number the radio is.My brother in law owns an old Shortwave radio which is sitting in his two story garage/shop,I dont know if it is a Hammarlund or what.(because I never did on purpose get close enough to the radio) He is the kind of a guy you dont want to ask questions about his possesions,he would give you that kind of an evil eye "look".He is about seventy six years old and he worked in the Pentagon and he was in the U.S.Air Force and he and his wife (my next oldest sister) own many fine old valuable antiques,they do not buy junk.Someday,I might work up enough nerve to ask him if he ever wants to sell that old Shortwave radio,just let me know.

< Snip >

I do not have a problem with the occasional political comment but the day after day long diatribes in the wrong news group shows antisocial behavior in the least and mental instability at most and nether attribute will cause them to be read in most cases. This is clearly self-defeating behavior. This together with the abject lunacy of their posts relegates them into the bit bucket.

I can't fathom the reason they post here as they demonstrate their lack of interest in the hobby by their lack of on topic posts.

The best thing to do is not pay any attention to them.

If you and a few others did not respond to them I would not know they were still posting in the news group. The number of these posts would decline and more people that are off put by the flaming off topic content would post instead of just lurking. These posts would mostly be on topic.

You have to recognize the fact that your exchange with them causes a decline in on topic posts. Further by responding to them you cause on topic threads to get muddled by responding to them.

You have to understand that there is a cost associated with recognizing and responding to nut cases on a continual basis. You legitimize their off topic posting by responding to them. You show or demonstrate to them that their postings have value by taking the time to respond. Even just a insult in response encourages them. Long responses give them huge justification so stop responding to them and they will leave for a place where they get a response.

China Radio International
0500-0600 UTC
Target - North America
5960 kHz and 6190 kHz
both out of Sackville, New Brunswick, Canada
http://www.primetimeshortwave.com/time.txt
Try other frequencies also, I get their Albanian relay quite nicely as well

Well, if they don't protect the AM clear-channel stations any longer -- that will mess with coverage area maps - no doubt. And then just how exactly will the advertising department sell evening drive time slots. "We think on cloudy days you may reach this area, but on sunny days you can only go so far. I suppose the FCC doesn't really want to deal with all this which may be why they are doing the "whorehouse" thing. I know I'm just an old fuddy duddy but it does seem that radio as we knew it is going to be no longer. And I'm sure there will be great benefits in the new system so to speak -- whatever that ends up being -- but for now -- it's looking like " the good ole days" were really good.

"Radio-Mart isn't doing anything different than the normal used gear
seller... he just doesn't hide his practices as well. Millions of
salespeople use these tactics all day long."

Nice justification. I'll be sure to ignore your advice in the future.

Radio-Mart is into buying radios on Ebay and then turning around and
selling them on Ebay for a higher price and pocketing the difference.
It makes perfict sense to look for radios that are undervalued and then
resell them. I and most other people have no problem with that. The
problem is he does not tell the truth about where he got the radios and
the condition of the radios. I don't understand why he is compelled to
do tell stories about the radios he sells but it does not generally
cross the line into outright fraud and treads around in a grey area so
he will continue to be controversial topic in the news group. Going
"private" will further take his sales into the grey area and apparently
that and the story telling are risks he is willing to take. Buyer
beware.

I have not contacted nor am I aware of anyone else who has contacted
bidders about Radio Mart auctions. They may have read about him on
Usenet, which would eliminate any reason to contact them.

I don't care one way or the other about Radio Mart but people that buy
from him should be informed about the way he conducts his business.

As one of the larger broadcasters they broadcast on a lot of frequencies
direct from China and through relays. Could you tell us the frequency in
addition to the band?

5960 and 6190 are two possibilities. Both are relayed from Sackville
Canada.

158. short wave reception in New Hampshire...is it less than a couple years ago?

Newsgroup: rec.radio.shortwave
Date: 2006-01-01 23:35:48 UTC
From: David Mills <hikerdavid@comcast.net>

Source record: 56807

Hi,

I am using a Grundig YB 400 PE. A couple years ago.. (ie 2003-2004) I got many stations from Radio Canada to Radio France to china and of course the VOA. At the time I was in a house on a hill top.

Now I am in an apartment building in a shallow valley. I get very few stations. Those I get the reception is not that great. I have not used external antennas..just the one that came with the radio.

What's up? could it be that there is just less broadcasting going to the northeast us?

David

Whats up? Like you just said, you've moved from the house upon a hill to an apartment building down in the valley, the valley so low...

Go back upon the hill and check things out in the evening.

You may want to try and string up some kinda antenna outdoors, or, you may just wish to move.

Well, I guess this makes me an old timer as I used to be that TV repairman in the early 80's. Tube sets, solid state and hybrids of the two were the fare of the day.

How to you make the connection from 7030+ to the stereo amplifiers? Did you make a cable to the auxiliary jack and use the line outs, the loud speaker jack or the headphone jack? Have you experimented with all these outputs and found the line outs to be the best?

Looks like two things:

1. Location. You moved from a good to a poorer place to receive SW
signals on a portable radio.

2. Higher frequencies these days are not propagating as well as a few
years ago since we are at a solar minimum so try the lower bands around
sunset to sunrise.

Hi Telamon.

I had Richard Hillier at AOR UK make up a special cable that goes from the AUX jack (DIN Plug) (line out) on the back of the receiver to two RCA plugs which I plug into my preamp's TUNER jacks. I use the EXT LS 3.5mm jack on the back to attach the RS external speaker.

I would not use a headphone jack to power a loudspeaker nor would I run a cable from the EXT LS jack to my preamp.

The audio circuits in the AR7030 Plus are full stereo; AOR was originally going to design and market a broadcast FM stereo section as an option. Unfortunately, they never did so.

The audio (line-out jack and external speaker jack) is fully controllable by Jan Arkesteijn's RxWINGS program - together or independently. He has also added, at my request, a MUTE function (for use when the telephone rings or my wife has something of vital importance to tell me).

They never had anything like this back in the "old days."

But those old sets sure LOOKED good, didn't they?

The Grundig Satellit 800 and the Sony ICF-SW7600GR also both have proper line-out jacks but the sound quality obtainable from them, while very good, is no match at all for the AR7030 Plus.

Best,

Joe

Here in the U.S. most political conservatives look upon England/Europa
as having "liberal" values and would be up in arms if their precious
kids were listening to BBC in the classroom.

Perhaps it is happening in some schools, but I have not heard of it.
We're having a hard enough time getting evolution taught without
intellectual design/creationism getting equal weight.

Remember, this is the country where French Fries (that's what we
normally call our fried potatoes) were renamed Freedom Fries when the
French called Bush's bluff on WMDs...

Dear David,

Telamon is absolutely correct in his assessment of your problem. You may be unaware of the eleven-year sunspot cycle but, as Telamon indicated, we are fast approaching solar minimum. Lower frequencies are heard better at the minima in the cycle but they do not travel as far as the higher frequencies. (You can still hear stations on the higher frequencies during the daytime, just not as many as in the recent past.)

The best solution for you is to try a modest external antenna with your YB-400PE. A Sangean or similar wind-up type is a start. If you see some improvement with that over the whip, you might then consider trying a Sony AN-LP1 Active Loop Antenna.

And have patience. Starting approximately late 2007/early 2008, the next solar cycle (#24) should start, sunspot numbers should slowly increase, and in just a few years, with any luck, you'll be hearing plenty of DX on the shortwave bands.

Hang in there!

Best,

Joe

DS,

The NAB is about "The Broadcasting Business" and a Corporation
with a Hundred Local Radio Stations can make more Money; then a
Corporation with a Few High Powered Clear Channel Radio Stations.

Thousands of Local 1KW, 5KW and 10KW AM Radios Stations
serve more People (Radio Listeners) and produce more Local Jobs
and Revenue plus Local Taxes that aggregate into a much larger
National Economy then a Few Clear Channel Big Stations.

The future of Free {Commercial} Broadcasting in the USA
is with IBOC - ? WHY ? - The NAB and the FCC Want It !

just my two cents worth ~ RHF
.

Stop hijacking the subject title that people use in your reply. It's against NG rules, unfair to the original sender and shows clear lack of class; but then again I don't expect much of that out of you. How would you like it if we do the same thing to your posts.

Someone will be very happy with that radio....even if it just sits on a shelf, looking nice. Ebay (and radiomart) is fulfilling the American Dream. I do agree that the guy is a sleazeball, but he is telling us what we want to hear and making a big profit in the process.

We (the buyers) are the real fools here.

I've been noticing all that on the "best-of" demos at Costco. Artifacts and
aliasing and moire and whatnot.

It was funny when local Channel 5 started with a digital STL. Their bit rate
was incredibly low, which made for *extremely* bad video to the point of
comedy. On one news shot they were shooting through a chain-link fence to
see someone on a schoolyard, when the person started running and the camera
panned the fence *disappeared*. Half the time the local anchor's glasses
would partially disappear, and they never ever stopped flashing artifacts.

Even when listeners were still hooked by the romance of reception over long distances, sponsors had realized that advertising to anyone who lives more than half a day's drive from the store is useless.

I noticed he didn't get much for that Collins "designed" R390A. BTW,
can you believe this bullshit on the 392 he has for sale:

"I have owned this exceptional example of the 392 for over 2 years, I
purchased it from the son of a retired Major who had passed several
years ago and it sat in a lock up for several years.

Out if all the R-392's I have owned, none have even come close to the
performance of this particular one, the receiver performance is
stunning and all of the controls have that tight new feel to them, I
dont think this receiver had seen much use before coming my way."

Maybe he has a HF1000 that was only used on Sundays by a little old
lady.

Maybe he does! In one auction still going for a Drake R-4C receiver (58452087910) he claims to have an ICOM IC-7800 transceiver. That's
over $10,000.

I expected that you would use the line out so you would bypass the 7030+
audio amplifier. I have not done this yet but I'll get around to it one
of these days. So far I have used the front jack with ear phones and the
LS jack for an external speaker but I'm working on antenna projects
right now. That Aux jack on the back is a 8 pin din so I should be able
to find a plug somewhere around here when I get around to it. Thanks for
responding to my question.

Tony - You are not required to read my replies ~ RHF
[Feel Free To "Plunk" Me - Put Me In Your Auto-Delete-File :<]

? Question - Tony ?
Why Didn't You post something to DaviD for posting such
an Anti-American piece of garbage reply like this :
"Americans are completely apathetic regarding International affairs.
We prefer street crime and militaristic jingoism from all our news
media. People here use the shortwave to listen to KKK preachers."

Tony - Is it because you agree with DaviD ?
* Americans are completely apathetic regarding International affairs.
* We {Americans} prefer street crime and militaristic jingoism
from all our news media.
* People here {Americans} use the shortwave to listen to KKK
preachers."

Tony - Take a look at the two replies to the original post from
"James Douglas" and "Bob Miller" they make me proud to read
this newsgroup. DaviD usually posts to POLLUTE the Message
Traffic here on the Rec.Radio.Shortwave NewsGroup.

tony - back-at-you - are we having a dialog ? ~ RHF

Norml,

One Chevy Dealer on a Clear Channel Radio Station in Chicago
can not sell as many Cars and Trucks as a 100 Chevy Dealers
within the Signal Area of that Clear Channel Radio Station : Who
are using Local Radio Stations Day and Night to Sell many many
more Cars and Trucks - Then One Super-Dealer on a Mega-Station.

Free {Commercial} Broadcasting in the USA is all "ABOUT"
the Marketing and Sales of "HomeTown" [Local] Products and
Services via Local Radio Stations - That is the Basis of Our
National Economy -and- After all All Politics Are Local Too !

to my simple mind - that's the way it works ~ RHF

You can't argue with statements like this "This the Best One I have
Ever Come Across" because it expresses an opinion. Normally you want to
show an item in its best light when you go to sell it.

He does make factual claims such as "it was just aligned this past
week" that are factual. Now if the radio was not just aligned then that
would be a deliberate lie. He should show some kind of proof that it
was just aligned such as a bill for the alignment. If whoever gets the
radio finds it out of alignment or not working then that would be
grounds for recourse.

A good review of the new Eton E1

http://snipurl.com/l7mh

Which contains the following lines in the article closing:

==========
The Sony 2010 can still claim to be the most sensitive SW portable anywhere near this size category, and I won't be getting rid of my 2010 any time soon. But even though it is a tad more sensitive off the whip, the E1's enhanced dynamic range and other rf capabilities, it's superior sync circuit and it's excellent SSB performance make most listenable signals sound better than on the Sony.

The SW77 is the least capable in this group. It's once novel "Page Tuning" feature (which I still like) simply doesn't compare with the flexibility and scope of the E1's memory system.

In total the E1 is a huge success and Eton is to be congratulated for giving us what stands as the current "Leader Of The Pack" among World Band portable radios. At this moment it's the best World Band portable on the market and I highly recommend it.
==========

My first good receiver was a Brog Warner R392/URR, to give the full
designation.
A great receiver. I still "own" it, but it is on permanant loan to a
friend with a bit
of surivialist streak. He wanted something that would continue working
after aNEMP.

Like I said, a great receiver BUT....
It was a PITA to rapidly try to go from say 5.100MHz to 23.869MHz.
AM and CW were great. FM via slope detection was passible, but
SSB was a major PITA. No noise blanker.

It was portable and would operate for several days from a set of car
batteries in series, especially if you pulled tha t@#$^ audio output
tube.
I used, and still use, a set of Sennheiser HD424 high z (2K) stereo
headphones that the driver supplied more then enough AF to bust your
ear drums. I added a set of back to back 1N4004s to limit the pain from
static crashes.

While it was fairly stable, it was nowhere near as stable as a R390.
And while it was very quite and reasonably sensitive, in most locations
the extra quitness and sensitivity are not needed. An again a R390A
is quiter and about 10dB more sensitive.

Unless someone has to have every last radio designed by Collins I
really
can't think of any good reason to buy one.

But I guess there is no accounting for taste.

While portable, it weighed in at something like 80lbs. And with two
full sized,
as in from the days when we all drove V8ss, a set of batteries wasn't
exactly
light either. My wife had a VW "Transporter" that was great for camping
and
hauling that heavy equipment around. We had many fun filled
mini-DXpeditions,
but I don't really miss lugging that heavy radio back in to the house
at the end
of such camp outs.

I disagree with RHF's part about producing more local jobs. In markets were
Infinity, ClearChannel and Entercom own most every station in the market,
there end up being far fewer jobs than if the stations were all owned by
different companies. In most markets these corporations have one or two
engineers to service all their stations, with only one office staff, and
often air personalities that pull duty at more than one outlet (all of which
are in the same building)

209. R-M: Can This Radio Be "Cleansed"?

> Damn.

And therein lies the rub.....many dozens or hundreds of people who were ripped by this scam never got a chance to post negatives because eBay turned off that ability when they suspended the seller's account. They also deleted several hundred messages pertaining to the seller's activities that were posted to eBay's message forums.

Kind of makes you wonder who eBay is really trying to protect....

What's with his private bidder thing? I would never bid on an item with a private bid. With private bid you can bid against yourself with another ebay ID, and use it many times over to increase your price. I'll bet he offers a lot of second chance offers when he wins his own auctions.

Lenny:
I have a Hammarlund HQ-150 and it's a lot of fun to use (see website below).
It's also quite sensitive and has a built-in Q-multiplier circuit. I have
seen these in excellent condition on Ebay go for about $150. I think the
reason is because everyone wants an HQ-180.

Mike, what is the sleaziness you are inferring from these ads? Are you
suggesting that he did not honour the sale of the first one as inferred by
basfm6 <basfm6@postcards.net>? These could be two different radios - the
photographs are not identical. One is with the original manual, the other
without. Compare the colour of the feet - one is yellower - the difference
could be due to different colour balances in the images but it might also be
age or smoker effect.

Tom

I'm not trying to wave the ebay flag but that last line seems overly accusatory. They canned the asshole's account quite pronto and that put the brakes on adding more negatives. I really don't think that is by design...or even by a stretch that they are intentionally "protecting" the scammer. I'd rather see them can his ass as rapidly as possible rather than deferring to those that want to add their offering to the already steaming dogpile. Thats a "software decision", not necessarily a corporate credo.

As to the deleting of the forum topic...I don't know how that works because I've never used their forum. Do the topics just 'go away' when the subject of ire gets canned? Beats me. On the surface I'd have to say that nixxing a public forum topic without solid legal justification does indeed smack of something...credibility of the venue or whatever. I still think that your suggestion of 'protecting the scammer' is a pretty long reach. Its more like protecting their own ass as a means of damage control by squelching the topic and hoping it will go away....which of course it will not. This incident will become the latest poster-boy of internet scams.

'Caveat emptor' means little to people who have been ripped off for several hundred bucks and are searching for someone to blame or are hoping for recompensation. This couple apparently worked diligently to develop their 'final scam'. It will all come out in the movie :)

Al Qaeda has openly declared their participation in and intent to continue
the terrorist attacks on soldiers and innocents alike throughout Iraq. It
doesn't matter if they were Iraqi, we're fighting Al Qaeda there.

> Now, on the other hand, if you see a mother who, in *her* estimation,

She's an opportunist cunt, using her son's death to put herself in the
limelight. There was no lie before the liberals accused Bush of lying.

I've always had this wild idea for a science fiction novel where we put up enough geosynchronous satellites over the Americas that the mass causes the planet to have a new, offset center of gravity and wobble off into a new orbit. Hm. Maybe that's what's causing global warming? :)

I think it's basically the rules on ebay. Even if the seller (or buyer) is a scammer, the rules state quite succinctly that you may not use any personal information in a public arena. This really includes the posting of sellers as scammers on usenet, and could technically get the poster's account closed. That being said, I doubt that ebay has people out gleaning usenet for posts about their clientele.

I assume you are joking,

but if you are not...

you don't see anything wrong with two auctions with almost identical
write-ups saying that the particular receiver is "the best ever seen" for
TWO different units of the SAME model ?????? isn't there only ONE best ever
seen for an FRG-7 and he had TWO at the SAME time so couldn't only ONE have
been the BEST ??????????????

> channels.

I understand, but I guess that you -as a listener- where not really
supposted to be listening to these stations anyway.

I'm not really an expert on the US broadcasting-industry but are people
on in these areas considered to be a 'target' for these radio-stations?
Do radio-stations carry ads for these audiences?

> Even IN the cities, if someone likes to listen to a station in the next city
> that has programming unavailable in their own city, this is now nearly
> impossible.

Well, it looks like you wheren't supposted to be listening to these
stations anyway. :-)

Don't get me wrong.
As I do not live in the US, I don't really have a say in how the
broadcasting-industry is done on your side; but -from an outsider-
IBOC/HDradio looks like a typical example of a standard which has been
designed by the industry to suit only the industry.
The wishes of what people or the listeners want seams to be of
secundairy interest.

Digital broadcasting can be used for a number of things: better
audio-quality, additional content, broadcasting power tuning, additional
data-services, stand-alone datacasting, etc.
IBOC looks like a standard which is aimed at one certain application
("better audio") and reduce as much as possible the other applications

(like "additional content") as this is the best for the industry.
-cfr. the "switchback to analog" rule in IBOC-.

It looks like being designed to reduce the risk of additional competition for the radio-stations.

But, again, it's not my business to critise the decisions of other contries. It's the responsability of your politicians to decide what technical standards are adopted or not.

Cheerio! Kr. Bonne.

I'm not suggesting that they are protecting the scammer.... I'm quite sure they wouldn't do that. Rather, it appears that eBay is covering its own ass from further scrutiny regarding the actions of this seller. I'm not saying they ARE actually doing that, it just appears that way.

It has been so long since I have left a bona-fide negative on anyone that things may have changed since then, but I know that it used to be possible to leave a negative for someone who was NARU'ed for excessive negative feedback or other forms of abuse. I did it once to a guy who bid on one of my auctions that had been kicked for being a non-paying bidder on about three dozen other auctions. If the blog complaints about the crooked seller are any indication, that capability has apparently been removed.

Although the ability to leave a negative on a kicked seller seems kind of futile, keep in mind that the negatives may be the only indelible indication of who got ripped by these folks.

>
> As to the deleting of the forum topic...I don't know how that works

The ebay mods tend to can any topic that is critical of eBay or tends to make eBay look bad. Given that they own the forum and the server on which it resides, they have every legal right to do that. However, in this case, when we're talking about a bona-fide scam artist that has burned hundreds of people in a short and very critical time, Deleting the posts seems ill-advised.

>I
> still think that your suggestion of 'protecting the scammer' is a pretty
> long reach.

As I said above, I wasn't intending to imply that.....

Its more like protecting their own ass as a means of damage
> control by squelching the topic and hoping it will go away....

Now that's what I WAS implying :-)

> which of
> course it will not. This incident will become the latest poster-boy of
> internet scams.

There are some bad things that happen where no amount of spin or damage control will suffice to minimize the carnage.....The only thing that can be done is to ride the wave of adverse publicity, take a few lumps and hopefully walk away with some lessons learned. This is one of those things. I'll bet ebay puts some controls on how many auctions a seller can list at one time after this; If they don't, some variation of this scam will be pulled off again.

>
> 'Caveat emptor' means little to people who have been ripped off for
> several hundred bucks and are searching for someone to blame or are
> hoping for recompensation. This couple apparently worked diligently to
> develop their 'final scam'. It will all come out in the movie :)

Although I agree with other posters that eBay is not responsible for the actions of these crooks, It might behoove eBay to make the people who were ripped off whole for their losses on a one-time basis. This scam was apparently so perfectly executed and exposed and exploited so many weaknesses in the eBay system that the standard ebay response to burned sellers could cost eBay way more in lost confidence than any amount they could hope to save. An occasional rip-off occuring at any other time is read about and then quickly forgotten. A criminal action of this magnitude, occuring just before Christmas and affecting hundreds of Christmas shoppers, is likely to be remembered for a long, long time.

I'm selling 3 of my sw receivers. I'm
disabled, so I cannot ship.
I'm in Baltimore Couty Maryland Essex
zip 21221:

Palstar R30CC (Collins Filter
w/power supply and manual
Works Great, Clean Appearance
$400-

Sony ICF- 2010
Serial Number 362998
PS, mamial,carry strap, box.
Never hooked tp ext. antenna
Looks and works great
$200-

Zenith TO 7000-1
All Transistor, Made in US 1980-1981
Clean, Good working older analog radio
battery or AC, operatiing book/log in door
(cord included)
$150-

Cash only please

If interested in a package deal for all
make an ofer.
Thanks

Email me direct please. not through the forum

Not to mention that he always seems to get FRG-7s "in to stock as part of a part exchange deal" and that they are always "the most perfect example of this sought after rig your ever likely to find".

Also, "I have found the receiver a delight to work on, no components needed replacing and the alignment was straight forward thanks to Yaesu's excellent design." is a lie, implying that he actually aligned the radio. He doesn't.

And the fact that the original seller will usually be truthful about any problems the radio might have, but those problems are mysteriously absent from Radio-mart's listing, even though it is well known that he doesn't fix anything. Does anyone know if he is even a radio tech?

Well, Al Qaeda is in numerous countries around the world, certainly
throughout the entire Middle East. Would they have been in Iraq in any
significant numbers if we weren't there first? There was no evidence
of that before we invaded.

I think it's more about a mother's love and a mother's grief and a
mother feeling she's been chumped out of her son's life rather than
"opportunistic" or "liberal vs. conservative" or "limelight". (BTW, an
observation: you seem to put a lot of stock in "limelight"--a la your
Powell comment).

Also please realize that her views aren't all that unique---about 48% of
the U.S. population and 85% of the world population at large believe the
war was/is bogus...

Mike,
It appears that you are obsessing about Radio Mart and that is an
unhealthy position to put yourself in. Accept that this guy is going
to continue playing this game until he stops making money at it - and
also accept that your constant "Radio Mart Alerts" do little to cut
into his profit. I'm in no way saying you're wrong about Radio Mart,
just suggesting that it's taking up too much of your life - time that
could be spent in a more rewarding manner (family, friends, radio
etc).

Just a thought to make 2006 a happier year.

I had one of these, it is nowhere near as good as either your FRG-7 or
FRG-9600, On HF it is no better than the vr500 or yupi7100.
It is quite a decent scanner, although I have had better. The manual is
pathetic, you have to learn how to use it yourself more or less.
If its use is mainly for HF, I certainly wouldn't bother, If you intend to
use it as a general scanner, It's OK, but there are better ones out there.
hope this helps a bit

Cindy Sheehan Getting The Facts Straight :
[Know Something About Army Specialist Casey Austin Sheehan]
http://en.wikipedia.org/wiki/Casey_Sheehan
http://www.truthout.org/cgi-bin/artman/exec/view.cgi/38/10216

First - Her Son Casey Repudiated 'her' Anti-War Values
by CHOOSING a Military Career.

Second - Her Son Casey Re-enlisted in the US Army
Knowing that his unit would be going to Iraq.

Third - In spite of Her Urgings to go to Canada when Casey
got Orders to Ship-Out. Casey Did His Duty as a US
Soldier and Server His Country.

Fourth - Casey Died Honorably as a Soldier Fighting for
His Country. Doing What He Wanted To Do. This is Back-Up
by other Family Members and Friends who all oppose
what She is Doing to Destroy what Casey Son Died For.

Fifth - Plain and Simple - She was Anti-War before Casey's
Enlistment; During Casey's Service and After Casey's Death.
- She Is Betraying Her Son Casey's : Values, Service,
and Sacrifice [.]

Sixth - If 'she' Truly Wants To Be About Something
In Memory of Her Son Casey :
* Let It Be About Casey's Values.
* Casey's Service To His Country.
* Casey's Sacrifice for His Country.
NOT - Her Own Life Long Anti-War Political Agenda.

Seventh - Webpages and Tapes of Meetings PROVE that
'she' is being used by the Anti-War Wing of the
Democrat Party of the USA as a Propaganda Tool.
(OT) : Neo-Comms Prostitution of Cindy Sheehan
http://groups.google.com/group/rec.radio.shortwave/msg/a6fb12bbf6f42996

Carter [K8VT] - You have stated your opinion and I have
stated my opinion - There In Lays "The Power of Belief"

(OT) : Pray for the Soul of "Casey Sheehan" and all others
who Served and Died in this War Against Terrorism - Amen
http://groups.google.com/group/rec.radio.shortwave/msg/e51da10825c3195d

(OT) : What is 'cool' about Cindy Sheehan using her Dead Son
"Casey" as a Propaganda Tool to farther 'her' own personal
Anti-War Political Agenda ?
http://groups.google.com/group/rec.radio.shortwave/msg/a65f4a8f73cc18d8

> plus Local Taxes that aggregate into a larger National Economy then
> a Few Clear Channel Big Stations.

Don't get me wrong. I'm not crisizing the way the US broadcasting business has been organised and organised itself around that. I'm just saying that -as an outsider- IBOC looks like a typical example of a technical standard designed by the industry to suit the industry and help itself control the "supply" side of the market.

I now it's easy to make remarkt afterwards, but if you look at the competition the radio-industry is facing now (like the satellite radio-systems, podcasting, radio-over-DVB-H, ...) the choice of IBOC does look a bit 'ironic'.

> After all it is "The Broadcasting Business" and a Corporation with
> a Hundred Local Radio Stations can make more Money; then a
> Corporation with a Few High Powered Clear Channel Radio Stations.

OK, but If I hear that large broadcasting-companies (like CC) are taking over the market anyway via their terrestial stations and via satellite; and there is somebody overthere who's doing recording of "good morning <city-X>", "good morning <city-Y>", ... just to create an impression of "locality", I have kind of impression that the broadcasting-industry is changing anyway.

Overhere, we already have the situation where radio-stations broadcast a "national" program where local news and ads are inserted, digital broadcasting allows this to go even further.

One of the satellite operators (IIRC it's sirius) have a patent on a system to insert localised ads, news or traffic-rapports into a "national" (satelite) stream based on the location where the receiver is positioned. This means that there is no strick link anymore between the transmission-medium and the what content the listener is hearing.

My impression is that we are heading to a situation where the "content generation" will get seperated from the "distribution", i.e. where you

have companies who are specialised into the generation of local content (local news, radio-shows about local talent, local ads, ...) -which can be a local newspaper- but that the distribution will be done at a higher (metropolian using DAB, DVB-H, ...) or "national" level (e.g. satellite). From the broadcasting point of view, this is already possible (like MOT datacasting over DVB, DAB or DRM) but the problem is that the current generation of receivers are not intelligent enough nor do they have sufficiant storage-capacity.

CC is active in both "local" broadcasting via terrestial stations and "national" broadcasting via satellite.
So why not design a receiver which can receive both satellite-radio and IBOC, use the latter to datacast local content, local news, local traffic-bulletins, local ads to the receivers, store in overthere and "insert" this information into a "national" stream from the satellite?

Digital broadcasting is not just about translating the current model of analog broadcasting into a digital version of it. Digital broadcasting can do a lot more then that (recording, datacasting, timeshifting, ...), and it will affect broadcasting in a much stronger way then most people expect.

I had that happen once with a different seller. I came in second in the bidding. A few days later I received an email saying the winner had backed out and I could now get the item at MY price. I didn't do it.

I'm sorry but that does not make sence.
A gouvernement has much more to fear from a limited number of powerfull mediacompanies -with the money, journalist staff, financial backing and hence political support to back them- then from a large number of small radio-stations.

Mike,

The radio has a cool display but very poor dynamic range. Almost any antenna
will provide too much signal.

Most of the Founders didn't trust the Church and thought the Bible was
a book of fables and fairy tales. That's why they specifically
avoided any religious content in the Constitution.

Are you trying to rewrite history? Why are we dumber now than we were
225 years ago?

286. OT - Canada: Endorsement of the Conservatives

Newsgroup: rec.radio.shortwave
Date: 2006-01-02 17:03:10 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11rin6o9a4c4q67@corp.supernews.com>
Source record: 56925

Canada may not be aware of it yet, but it is now involved in the most important election campaign since its founding - more important than the free trade election of 1988, more important than the myriad campaigns of the 1960s, more important than any election involving Pierre Trudeau - for this campaign will pit a government very sympathetic to "engagement," i.e. appeasement, with Communist China (the Liberal government of Paul Martin) against what is arguably the most anti-Communist political party in the democratic world (the Conservatives). For anyone who is concerned about the Chinese Communist Party's abuses of its own people, its harassment and saber-rattling against its democratic neighbors, and its support for some of the world's most brutal dictators and terrorists, this Canadian election is impossible to ignore.

For those of us who cast a worrying eye toward the growing, hostile power that is Communist China, Paul Martin's brazen, backhanded treatment of human rights in the People's Republic and his absolute refusal to recognize the danger the Communist regime poses to the security of his own nation has been maddening.

The Liberals have also allowed Communist China to get its hands on important pieces of Canada's greatest asset ' its natural resources. For months, Communist China tried to buy out Noranda, the third largest mining company in Canada. Prime Minister Martin made no effort to block the Communist would-be acquisition (but the Conservatives and the New Democrats tried). The Noranda deal fizzled, but Communist-controlled oil firms have been able to acquire chunks of Alberta oil concerns and a Canadian firm operating in Kazakhstan.

Meanwhile, just this past summer defectors from Communist China in Australia revealed a Communist spy operation in Canada that in part was being used to intimidate Chinese-Canadians into silence. They even had documents detailing Communist espionage against Falun Gong practitioners in Ontario; while former Canadian intelligence official Michel Juneau-Katsuya estimated that Communist Chinese industrial espionage cost Canada $12 billion annually.

Only one party was upset enough about this to bring this up in Parliament: the Conservatives. In fact, the Liberal government would not even entertain eliminating, or even reducing, the $50 million-plus in "foreign aid" Canada handed over to Communist China this year (even the New Democrats joined the Conservatives in calling for the aid to be cancelled).

Finally, earlier this fall, the Conservatives attempted to bring forth a bill that would provide some recognition to Taiwan, where a democracy was built from scratch over the last eighteen years ' and in the teeth of the Communist dictatorship just across the Taiwan Straits. In response, Liberal

MP Dan McTeague smeared a pro-Taiwan witness unmercifully and, as Paul Wells noted on his Macleans blog, incoherently. While one MP certainly need not represent an entire caucus, when it's McTeague, the parliamentary secretary to Foreign Minister Pierre Pettigrew . . .

The reason for this government's behavior regarding Communist China is not of great concern here. Some have noted personal connections that point to corruption (Western Standard). However, whether perfidy or delusion is behind the policy, the policy itself remains the problem, and it needs to end.

We understand there are several alternatives to the Liberals - after all, they only won 36% of the vote and 44% of the seats in the House of Commons. Additionally, the New Democrats have opposed the $50 million-plus for Communist China, and the Bloc Quebecois are supportive on Taiwan (and Tibet, for that matter). However, only the Conservatives have consistently taken, and refused to abandon, the anti-Communist, pro-democracy position.

In fact, this position is not one dependent solely upon the leader, Stephen Harper. In fact, the leading lights within the Conservative Party on this issue are foreign policy critic Stockwell Day (anyone who still considers him a Neanderthalic throwback should read and re-read his Toronto University speech from this past May) and international trade critic Helena Guergis (a recently elected Conservative MP from - ahem - Ontario).

So, what would a Conservative government mean for Canada regarding Communist China? For starters, any "foreign aid" to the Communists would come to a quick halt. That's over $50 million that can be spent by or on Canadians, rather than going to prop up the Communist regime, however unwittingly. Furthermore, based on their record, the Conservatives would do everything they could to bust up the Communist espionage network in Canada. This would do more than simply stop industrial espionage. It would also end the reign of terror the CCP imposes on Chinese-Canadians, and finally grant them the freedoms they are too terrified to enjoy now. Meanwhile, Canadian resources would once again be for Canadians, not Communists. All of these things are possible even with a minority Conservative government.

Moreover, an elected government that supports democracy in China, and refuses to follow the "engagement" line, would send shock waves around the world. The effect on dissidents inside Communist China cannot be estimated. Exile groups would also have new hope.

As an aside, we would also note it might force a certain large neighbor to the south to take note of its own problems with Communist espionage, and act accordingly, ditto on the issue of Communist infiltration into the U.S. economy.

In fact, from down here, one of the most important effects of a Conservative victory would be the impact on the American debate on Communist China. Contrary to popular belief, Washington is no anti-Communist hotbed. "Engagement" has ruled the roost here for nearly two decades. A firmly anti-Communist, pro-democracy government might very well force the America

to examine her conscience on this issue, and remove what has become a major blemish in her foreign policy.

Canadians have always prided themselves on what they have done for the world at large, whether it's the "hard power" sacrifices made in World Wars I and II - both of which saw Canada involved long before the United States - or the "soft power" diplomacy of recent years. I do not intend to wade into the argument of which was (is) more important, for the free world will need more hard and soft power to face the threat of the Chinese Communist Party. However, with a Conservative government in Ottawa, Canadians can quickly restore their place as the conscience of the world. In fact, by forcing the free world to take notice of this threat, Canada might just save the world.

For those of you outside the Conservative base, if you have only one Conservative vote in you, if in your lifetime you intend to vote Conservative only once, let it be this time. Let this be the election in which that vote is cast.

>>"Divide et empirer"

> Not when the government and the corporations are one and the same.
> The message is tailored to sustain the status quo.

True, but there is no garantee that the interest of the gouvernement are
the same as the interest of the mediacompanies.

In fact, if there are a number of media-companies, differences in
interests between them will automatically result in a different attitude
towards the gouvernement.

Anycase, look at the problems there has been between the BBC and the
British gouvernement and between the RAI and the Italian gouvernement.
The best garantee for a free press is a press which is sufficiant strong
media (in this case a public broadcaster) which is able to stand up
against the gouvernement when it is needed.

> I think y'all named it ''fascism'' back in the '30s.
In the 30s, there was no such thing as the internet.

The net has given the people the power to communicate between eachother
and organise themselfs which is good counterbalance against the power of
the gouvernement and the normal media.

There seams to be a tendency nowdays to use as strong as possible words
for almost anything people do not like. AMHO, that's sad as the real
meaning of these words become more and more eroded.

Cheerio! Kr. Bonne.

308. (OT) : DaviD - So now 'you' write and spell the word [Christian] with a KKK instead of a 'c'

Newsgroup: rec.radio.shortwave
Date: 2006-01-02 18:22:36 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1136226156.687437.8490@g43g2000cwa.googlegroups.com>
Source record: 56956

DaviD - So now 'you' write and spell the word [Christian]
with a KKK instead of a 'c'

DaviD - How very Liberal and every so Enlightened of 'you' :
- Why Are 'you' promoting Social Bias and Religious Bigotry
Against Christians and All Persons-of-Faith ?
- Spelling the Word Christian "KKKristians" is clearly Hate Speech.

DaviD - Is this too another New 2006 Daily Talking Point
of the Democrat Party of the USA ?

DaviD - It Is The Seriousness of the Charges (The Facts)
about Senator Robert "KKK" Bird :

The Democrats Party of the USA is clearly Two Faced
on their wholesale affiliation with the KKK in the South
and Senator Robert "KKK" Bird's present Stature within
the current Leadership of the Democrats Party of the USA.

DaviD - Here is a Fact for You - Senator Robert "KKK" Bird, WV
was a Klan Member and Leader in the "KKK" and is right now a
Member and Leader in the Democrat Party of the USA.
* Not All Senators are former members of the KKK.
* Not All Democrat are former members of the KKK.
BUT - The Democrat's "Revere" Senator Robert "KKK" Bird .
Again DaviD - Are These Democrat Values ?
Again DaviD - Are These American Values ?
Again DaviD - Are These Your Values ?
Again DaviD - Why Are 'you' silent, Silent. and SILENT !
About Senator Robert "KKK" Bird ?

DaviD - Does the 2006 Writing Style Guide for the
Democrat Party of the USA now require 'you' to
spell the word [Christian] "KKKristians" ?

Question DaviD - How can 'you' Claim to be such a Champion
of the Individual Rights and Freedoms Americans : "IF" 'you'
denigrate the majority of your fellow Americans who happen
in some form or fashion to identify themselves as Christians ? ? ?

david - there is no wondering about 'you' - 'you' are a liberal ~ RHF

Please let me clarify - the special QSL cards will only be issued for
the period during which United Radio Broadcasters of New Orleans was
actually in existence and in operation. This period runs from Sept. 2
through Nov. 4, 2005. The cards are not intended for current
receptions. My apologies for any confusion.

>he simply presented the best Intelligence Information that the
>USA and the World had at the time.

The problem with this assertion is Hussein Kemal. If you've
forgotten, he was Saddam's son-in-law and was the guy in charge of all
the nonconventional weapons programs in Iraq. He defected to the US
and spilled the beans thinking we would install him in Saddam's place.
The beans were these; all the proscribed weapons were destroyed.
Before we pulled the UN weapons inspectors out of Iraq we put them to
use. We sent them to every site we thought might contain WMD's and
they came up empty every time. They described these tips as "complete
garbage." Read pretty much anything Scott Ritter has written, he was
there. Instead the "intellegence" we chose to listen to was convicted
embezzeler Ahmed Chalabi, who'd been out of the country for 20 yrs.,
and an alcoholic refered to as "curveball" who German intellegence
warned was highly unreliable.
I'm not privy to other countries intelligence data but I recall that
except for Great Britian, no one was enthusiastic about joining Bush's
coallition for war. About a week after Rumsfield declared that "the
center of Europe has moved east to Bulgaria" the woman announcer on
Radio Bulgaria stated that they had been coerced into joining. What
started out being refered to as "Bush's Coallition of the Willing"
soon was known as the" coallition of the billing." When Ari Fleischer
was asked by a reporter at a White House press conference what Mr.
Bush was offering other nations to induce them to join he feigned
indignance and said we were not bribing anyone and was actually
laughed out of the room. Truely a high point for WH press conferences.

>John 'ff' Kerry on Pre-Iraqi-War Intelligence Information :

I'm not. I would hope that you are, otherwise you are splitting hairs over semantics and truth in advertising. I know nought of whatever other experience you may have had with Radio-Mart and am simply responding to your original post that said that comparing these two successive eBay ads proved his 'sleaziness'. I compared them and don't see it and suggest you might be more careful that you do not slander.

So he said 'best ever seen' on two successive FRG-7's and that is the basis of your claim. Pretty flimsy - maybe he thinks the second one is the best. Regardless, you don't know what criteria he has based that on and have no reason to argue that it isn't. Regardless, any buyer has to separate fact from advertising hyperbole. 'Best ever seen' is obvious opinion, not fact, nor a distortion of any fact.

You, yourself, are given to hyperbole and sweeping generalisations. We've had this discussion before in relation to your criticisms of another ebay seller and about your own ads. As DXSavant suggests, don't obsess, lighten up, and enjoy the New Year.

Regards,
Tom

I've gone through the reviews and find it confusing. I don't think I've ever seen a radio with such polarized reviews. People seem to think they're great or that they're junk.

The inadequate Chinese power supply seems to be one of the biggest concerns, as version 1.7 firmware has apparently fixed a lot of the problems.

The extreme width of the coverage makes this an appealing set. I will do more research.

It's the width of the coverage that makes them operate rather poorly across the
spectrum.

Everything becomes a compromise.

CO2 is heavier than 02 by dint of an extra atom. Now, if storm winds are moving the much much much heavier Freon molecules from down here to up there to destroy the ozone layer, you can't tell me they're not moving a good deal of that 02 up there above the CO2 and back down again after cooling.

If CO2 lets solar energy in but not out, then let the environazis use it to heat their homes and run their cars and they can quit emitting CO2.

Since that doesn't work, you don't have a FACT there.

> FACT: Ice core samples show that Carbon Dioxide *is* the *highest* its

There are more CO2-exhaling animals on the planet than at any time in history. Of course there's more CO2. Plus we're burning stuff and making more CO2.

> I know that volcanic activity can add to the CO2 burden, but have we had
> more volcanic activity in the last 200 years compared to the previous

Careful with those volcanoes. Mount St. Helens put the lie to "nuclear winter".

> If you don't think mankind has anything to do with the highest CO2 in
> 400,000 years, I will respect that opinion, but would appreciate your
> thoughts on where else you think that this record amount of CO2 might
> have come from...

I don't care where it came from. It doesn't have the magical properties the environazis ascribe to it. If it did, it would make the perfect solar collector for running home and industry by solar power, and we wouldn't be making so much of it.

> fire!?!)

Aw, man, they didn't have fire until I was in eighth grade. And since we had the kind of global warming back then that they have now, it was always too cold to learn anything in school. We thought about electing a student to burn for heat, but we couldn't burn him because we didn't know what burning was.

I don't think I'll be feeding the negative side of some people anymore.
They seem to feed on anger and hard feelings, creating animosity where
non existed before.

Have a fine New Year, Ace. All the best to you.

mike

If you do get one, I'd suggest a BCB filter, FM trap, and a preselector. It is a VERY sensitive radio with not a lot of dynamic range. Using the ATT ocassionally helps also. With the proper external tools in place, it does just fine on H.F....

I thought that, except for Gettysburg (and even at that, Longstreet's
statue is "incorrect"), there was no real correlation between horses'
hooves in statues and how their riders died:

Actually, the source of your confusion are your own erroneous
assumptions.

The end of URBONO broadcasts was widely publicized in the DX press -
both hardcopy and electronic. Nowhere in the original message did it
say that the special QSLs were for current broadcasts from any of the
stations which participated in that broadcasting effort. Also, URBONO
is referred to more than once in the original post in the past tense.
Given these facts, it's all pretty much a "no-brainer".

KH2AR is providing a much appreciated service to DXers by acting as the
QSL bureau for URBONO, and has spent lots of time and money (his own)
in arranging this.

Your response to him was rude and totally unnecessary.

Yes, Radio Mart certainly gets a helluva lot of attention in this
newsgroup, to be sure; and yeah, a few do seem to put in the time,
regularly studying his auctions, etc.
Still, a "play by play analysis" of Radio Mart's activities beats the
crap outta the newsgroup ego wars and the pathetically lame attempts at
political debate that take place in rec.radio.shortwave. At least the
R-M threads are on-topic for this group.

That's nice, but for a great number of folks who had no idea that a 'special'
QSL was to be issued, we simply failed to take down any notes.

Nice to issue a special QSL long after the fact!

>
> Your response to him was rude and totally unnecessary.

Actually it was not. His original post made NO MENTION what so ever of it being
for previous broadcasts. It sounded more as if it was a commemorative QSL for
some current reports.

Thanks anyway.

Next time let the boy cover his own ass rather than sending his sock puppet.

Not so. The Canadian government, in whatever political stripe, is almost as much in love with Communist China as the US corporations are. It appears about ninety percent of all manufactured goods in our stores are of Chinese origin.

The vast majority of light fixtures are now made by the slave labour in China. They target industries to monopolize. It's an unholy alliance. Big Business in partnership with a State of over a Billion people that knows how to control it's work force and 'wages'.

Not sure, but recently he said that he had an ICOM IC-7800, a pretty high priced amateur transceiver. I looked up his name on the QRZ data
base and it doesn't appear that he is licensed. That doesn't necessarily mean anything but an over $10,000 transceiver is a mighty high
priced SWL receiver!

But heck, he might simply have taken it in as part of a "part exchange deal", and will offer it up on eBay in a few days or weeks.

RM, always a source of humour.

I almost was a scam victim of this person also. I say almost because I sent my $123 International Money Order on October 23 for a transmitter that he was supposedly selling. Well last week my original letter came back with a sticker saying that I had used the incorrect address! Proof positive that it pays to screw up!

It's an active antenna with a preselector and can be mounted in a window.

Tard

I wasn't talking about how many off topic threads you start, but how many On Topic threads you interrupt and hijack with Off Topic crap. It's a very sad thing to see a newcomer or oldtimer's sincere post get hijacked by you and yours. How many people that read this group that are thinking about getting into shortwave read your posts and are turned away from SWL? My guess is way too many.

You're a sad Tard Boy...

The option plate on the back panel of the radio has screws in different
places indicating some option is installed in one and not the other
radio. Yes RM could have swapped stuff in and out of the radios as he

has been known to sell optional equipment separately for more money but it is another indication the radios are not the same.

Maybe he is to busy to write another description or maybe he thought the description was good and did not want to change it.

You can also count the Republican controlled House, Senate, and Presidency as being in love with Communist China and their cheap labor with their big business buddies.

Spend a day at China Mart or Kommie Mart or Tar Gay and see what they are selling.

Actually the hijackers were predominately Saudis not Iraqis. I would like someone to explain to me what exactly the Iraqi menace had in store for the US. It is ridiculous to embrace the so called joke called democracy in Iraq when you have all kinds of hellholes such as North Korea, Iran, China, and others living in dictatorships. Why didn't the US go after those clowns. Or was it just about the oil. Follow the money.

< Snip >

He was an adult that made the decision to risk his life for the cause of
defending out country.

Best case for Mom here is that she is disrespecting her son's choices
and the memory of his death.

Worst case is Mom is prostituting her son's death for a political gain.

This has nothing to do with "liberal vs. conservative" just respect for
the decisions her son made in life and since she shows no respect for
her son's choices after passing away, she deserves no respect from
anyone else. If you can't see that then heaven help you.

The Zenith Transoceanic 7000-1
and the Palstar R30CC are
still available
Thanks

388. Icom R-75

Newsgroup: rec.radio.shortwave
Date: 2006-01-03 04:00:42 UTC
From: "&#65533; Dr. Artaud &#65533;" <&#65533;NoSuchThing&#65533;@Notreal.com>
Message-ID: <Xns973FEA12DCEBETheDoctorisin@216.196.97.142>
Source record: 57038

I meant to post this anomaly some time ago. I have the Icom R-75, among other radios. One day I tried to turn the radio on, but no such luck. Pressing the button would yield nothing but a mild popping noise from the radio, very short in duration. Leave the radio off for a little while, try pressing the button again, and the little pop could be heard again. (Just the most minor noise issuing from the speaker). I resigned myself to the belief that the radio was going to need to be returned for service.

Just to be sure, I checked the power connections and the power supply (an SEC 1223 Power Supply that supplies multiple radios). The supply was OK; I removed and reinserted the connection in the radio. The other radios on the power supply worked ok. Sheesh, I could find nothing simple.

Before I consigned the radio to its box for shipping, I decided to try the supply that came with the radio. No luck. Shucks, so I did what any Red Blooded American would do, I smacked the radio a couple of times.

I again hooked up the Icom supply to the radio, pressed the button, and viola!, it power up normally.

I returned it to the SEC 1223 power supply and all was well there too. It's been fine ever since.

Has anyone else experienced similar problems with their radios?

I use HAM Radio Deluxe with the radio, so sometimes the controls are software driven. This leaves the radio in the odd condition of having the volume control turned all the way down, yet when the radio is first turned on the volume can be quite loud. You need to turn the volume up then down again to return it to normal operation.

Since HAM Radio Deluxe doesn't control the on and off, I doubt that the software had anything to do with the failure to turn on. (Not to mention that a smack fixed it.)

Just a thought.

Dr. Artaud

Oh fiddle-dee-dee!

If you don't like this seller, why don't you just IGNORE him?

Did it ever occur to you that by giving him all this free
publicity in the newsgroups (..at you energy and time
+ effort I may add) you are actually perhaps helping him
by attracting more potential customers to his auction(s).

Publicity even when bad = free advertising = more $$$ in his pocket.

393. Re: AN-LP1 and Eton E1

Newsgroup: rec.radio.shortwave

Source record: 57043

I should think that the AN-LP1 would offer some improvement. While I've not used the AN-LP1 w/the E1, I regularly use the AOR WL-500 with the E1, and it offers a nice improvement over the whip (and an improvement over the whip w/a Sangean ANT-60 roll-up passive antenna connected).

Given my experience using the AN-LP1 in the past with other radios and given the observed benefits of coupling the E1 with the active antenna I'm currently using, I'd say it's a fairly safe bet that the AN-LP1 will offer you a noticeable improvement over the whip alone.

416. Re: (OT) : DaviD - So now 'you' write and spell the word [Christian] with a KKK instead of a 'c'

Newsgroup: rec.radio.shortwave
Date: 2006-01-03 13:04:12 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1136293452.296796.233740@f14g2000cwb.googlegroups.com>
Source record: 57116

DaviD 'you' Write - [KKKristian] " It's my little way
of dealing with the people who destroyed the USA. "

DaviD - So now 'you' are claming that Christians
are destroying the USA.

DaviD - American History is full of Christians Who's Lives
have Greatly Enriched this Nation; Creating Our Freedoms;
Building Our Democracy; Protecting Our Freedoms; Working
For a Better America; and Lifting Our Spirits . . .

DaviD - Claiming that Christians are Destroying America - Is this one
more New 2006 Daily Talking Point of the Democrat Party of the USA ?

DaviD - How very Liberal and every so Enlightened of 'you' :
Why Are 'you' promoting Religious Bigotry and Hatred Against
Christians and All Persons-of-Faith ?

DaviD 'you' Write - " You shouldn't have joined the cult. "

DaviD - The Majority of 'your' fellow Americans happen to
identify themselves as Christians in some form or fashion !
? Are They All Members of a Cult that is Destroying America ?
? Who Get To Decide Who IS In A Cult -and- Who Is Not ?

DaviD - Linking "Christians" and "Cults" - Is this too another
New 2006 Daily Talking Point of the Democrat Party of the USA ?

DaviD - Does the 2006 Writing Style Guide for the
Democrat Party of the USA now require 'you' to
spell the word [Christian] "KKKristians" ?

Question DaviD - How can 'you' Claim to be such a Champion of
American Individual Rights and Freedoms : "IF" 'you' denigrate
the majority of your fellow Americans who happen in some form or
fashion to identify themselves as Christians and Persons-of-Faith ?

david - why do you preach hate against christians ?
- oh that's right you are a liberal ~ RHF

** U S A. Re URBONO QSL: Jim, can you clarify something? Are the reports that are being requested only for reception of the listed stations in the IMMEDIATE aftermath of the hurricanes, or are they good for CURRENT loggings as well? (Randy Stewart, Battlefield MO, IRCA via DXLD)

Good point - the period that URBONO operated ran from Sept. 2 through Nov. 4, 2005 and the special QSLs are for that time period. The cards are NOT intended to verify current loggings. Thanks Randy (Jim Pogue, ibid.)

Guess I wasn't the only one! And you'll notice that Jim clarified the situation, as it wasn't very clear what the original intent of the QSL'ing time period was, as I've said before.

Hello Mike,

I lived in Amman, Jordan, in 2001 & 2002. From there you can hear most of the main European Xmitters such as BBC, Netherlands, Belgium, Radio Exterior de Espaï¿½a, Deutsche Welle, Radio France Internationale, Vatican, etc. You can also pick up VOA, Radio Canada, China (they are everywhere in every languages...), etc.

You have of course a lot of Arabic Xmitters around, but since I don't speak this language, I can't tell you where they were from. I never had the opportunity to listen to a English speaking transmission of an Arabic radio. I did not find (but didn't try much) any program schedules of such transmission...

The main "exotic" transmissions I've heard were the "number-radios" (see http://www.spynumbers.com/ for more details) : very loud and clear here, supposed to be Mossad's transmissions (but could be from any surrounding countries of course).

Nowadays I'm not living there anymore but I'm still travelling to the Middle East (Lebanon and again Jordan those two next weeks). The situation is the same.

Happy new year to everyone,

Charly

dxAce wrote:

> Well, the food is different.

Is it? We have MacDonalds, Dominos, Pizza Hut here. We did have Dunkin' Donuts and Starbucks, but they went out of business. :-)

As for SWLing, it is very different. Here I am at the intersection of eastern and western Europe. Depending on many factors, sometimes I hear signals from the east, sometimes from the west, sometimes both.

There are lots of local stations but most are in Arabic which I don't understand.

There are no receivable time standard stations. The 80 meter ham band ends at 3850 and 40 meters at 7100, so the broadcast stations in the higher parts of those bands come in loud (meter pining) and clear.

Since we are in relatively the same time zone e.g. GMT+2, the programs make more sense. The evening news is in the evening, etc.

A few stations from the Orient, but I don't pay attention to them.

VOA comes in loud and clear. I used to think their party line was "America is perfect, everyone else is not", then I started to watch Fox News. :-)

Nothing on LF, though about 8 or so years ago I was able to receive something on 208 kHz. It was an Arabic broadcast and no, it was not an image or intermod.

It seems like no one regulates AM and FM broadcasts, you you get stations all over the dial, sometimes fighting for the same channel. We do get BBC on 629 and 1323 am, but I get a better signal on shortwave.

FWIW, the numbers stations I hear are NOT groundwaves.

Geoff.

dxAce wrote:

> Skids? How so? Not as many people buying your burgers?

You ask "Skids" and "How so" ?

Guess you must not have heard that GM and Ford (two national icons) are flirting with bankruptcy. Guess that you must not have heard Visteon is flirting with bankruptcy. Guess you must not have heard that Delphi and several other major auto suppliers are IN bankruptcy. Guess you must not have heard that three major national airlines are IN bankruptcy. Guess you must not have heard that an airline is going out of business today (3 Jan).

As a self-appointed "ace", you apparently claim to listen to the radio; if that's true, you might want to try tuning in a few domestic broadcasts and find out what's crashing down around your 'tard boy head in your own country...

Source record: 57131

Hello.

The only way to really find the answer is to try it.

I tried the AN-LP1 (two samples, by the way, just to make sure) with my Grundig Satellit 800. The results were disappointing, no better than the whip and sometimes worse. The AOR WL-500 Window Loop Antenna (now sadly discontinued) worked FAR better with that radio, in my experience. (But I finally decided to feed my Satellit 800 with the best - I bought a SECOND Wellbrook ALA 330S Active Loop Antenna for it!)

The AN-LP1 is, however, a superb antenna when used with a Sony ICF-SW7600GR or a Sangean ATS-606AP. This again is my experience.

Note that you will have to buy at least one, probably more than one, adapter to attach an AN-LP1 to the E1.

Best of luck.

Joe

I'm not aware of wire strength being an issue for ear buds or mini headphones. Wires will tend to break if flexing is focused at one point. Headphone manufacturers solved that problem long ago by tapering the insulation at headphone and plug junction points, so expect that any $20.00 set of buds should include that feature.

Given the envirnment it has to work in, the earbud covering will probably deteriorate long before the wires.

If it were me, I would worry more about fit, sound reproduction and hearing damage.

I have the SR-60 and the SR-125. Nice headphones, but expect to spend
some money on replacement foam.

Lately I use the Etymotic ER-6
http://www.etymotic.com/ephp/er6.aspx
They are the only buds I can stand. Though the look delicate, I haven't
broken them in 2 years of use.

If you want phones to copy hard to hear signals, then an old pair of
David Clarks does the trick. The fidelity isn't there, the David Clarks
seem to make voice more intelligible.

I don't know if Grado has the bucks to display at CES, but if they are,
those headphones are sold very cheap at the show. If you know someone
who is going, maybe they can get you some. The same with the Etymotics.
David Clarks are about $50 used. They use the same seal as off the
shelf noise isolators, so I replace my seals periodically by buying
throw away noise isolators at Harbor Freight, just to get the seals.

For extreme audio isolation, I use the ER-6 and Peltor noise isolators,
the kind they sell for the shooting range.

The only way to know is to try it....maybe someone here or in the Yahoo group devoted to the E1 can share their experience with you. Given what Eton is charging for the E1, there ought to be a high quality, external antenna included with the receiver.

453. ??Simple Reception Improvements??

Hello again all.
By now, you should be getting tired of my endless beginners questions.
Well, here's another, so get over it! :)
If you recall, I have an Icom R-75 with all the Kiwa Mods, hooked up to an Antenna Supermarket Eavesdropper
which runs into a Zap Trapper, then into the radio.
Both the radio and antenna are grounded to a cold water pipe in my basement.
I am generally pleased with SW reception, but, as this is my first SW radio, I'm sure it could be better.
Does anybody have any simple improvements that I can try to improve reception?
I'm kinda limited in my antenna placement as I only have one tree large enough in my yard to anchor an end of it to.
The other end is anchored to my house. Both ends are anchored with rope, and then an insulator connected to the antenna.
I'm sure I could pop for a expensive antenna like the Wellbrook, but I don't wanna spend that much $ now.
Whatever suggestions you have, please keep them simple as I'm not an electrical engineer.
My listening interests are mainly International broadcast and some utility monitoring.
Thanks,
Lenny

Lenny,

Concerning the {Metal} Cold Water Pipe Ground Connection
in the Basement. Is this older Galvanized Steel Pipe or newer
Copper Pipe ? Note - If PVC Plastic Pipe it will not work.

1. Follow the Cold Water Pipe down to where it enters
(goes into) the Ground / Concrete.

2. Ensure that there are NO Pipe Joints in the Cold Water Pipe
between the Ground Connection and the Ground / Concrete.

3. Make your Ground Connection within 3" to 6" of where you can
find the Cold Water Pipe going directly into the Ground / Concrete.

hope this helps - iane ~ RHF

DaviD - So the Subjest is : "RHF is an Islamo Fascist"

First DaviD it is "Islam-O-Fascist"

DaviD - There 'you' go preaching Hate Against People-of-Faith.

DaviD - How very Enlightened of 'you' to show 'your' Liberal Bias
and Left-Wing Bigotry against Persons-of-Faith.

DaviD - Remember One of Our Great American Feedoms :
"Freedom of Religion"

DaviD - First 'you' Target Christians and now 'you' Target Islam.

When I use the term Islam-O-Fascist it only applies to those
who promote a radical form of Islam and are in-fact Terrorist.

Islam-O-Fascist does not mean that everyone who practices
the Faith of Islam is a Terrorist; and in-fact the vast majority
of the Members of the Islamic Faith are peaceful good people.

Islamic Academy of New England (IANE) http://www.iane.org/
Would appear to be just what it is a Religious School that
offers a Quality Education in a Religious Content.
Read => http://www.iane.org/mission.html

When I sign-out 'iane' it simply means : "I Ain't No Elmer"

Butt - DaviD - To 'your' twisted mind one 'iane'
is equal to another 'iane'.

Butt - DaviD - 'you' are NO "King David"
http://en.wikipedia.org/wiki/David

And for that matter DaviD 'you' are NO :

"David Rockefeller"
http://en.wikipedia.org/wiki/David_Rockefeller

"David Bowie"
http://en.wikipedia.org/wiki/David_Bowie

"David Brinkley"
http://en.wikipedia.org/wiki/David_Brinkley

"David Sarnoff"
http://en.wikipedia.org/wiki/David_Sarnoff

DaviD'- Alas David 'you' are simply 'david' being DaviD
with Two Capital "D"s for Dumb and Dumber.

DaviD - I Am Glad We Had This Conversation :o)

God {Allah} Bless America and All American Citizens

There's probably not a lot you can do, simply, to improve reception.
If you have a favorite frequency, you could always cut a dipole that
is resonant for that particular frequency. It might help a little;
might not help much. Since your current antenna has inductors to
resonate it on fave swl bands, an antenna tuner won't help much. A
preselector might help some, might not; depends on whether there's
nearby broadcast stations smothering you with RF energy. An improved
ground connection won't matter a whither in your listening, either.
You're pretty much where you want to be. Unless you can get it higher
in the air, or further from any noise sources.

Then again, you can up up a completely different antenna. Then, one or
the other might be louder, depending on circumstances.

With all due respect, it seems to be *you* that can't see the point (and the only ones that need "heaven's help" are the 2000 dead and 19,000 mutilated).

You keep harking back to the son's "decision". You're getting warm and you've almost got it.

Her point is that his decision (you so dearly love to quote) was based on a lie and that the patriotism of a young, naive kid was pandered to by a lie.

You may or may not believe that.

I may or may not believe that.

But, *she* (and three fourths of the rest of the world) *do* believe it.

Well, I am an electrical engineer and it sounds like you have a very nice station already-great antenna, nice receiver, good mods for it! You've done everything right. Spend less time worrying about it and more time listening. (Although we all enjoy getting more stuff).

It really doesn't take a lot of antenna to get good international reception. Back in the very early 80's, I was in the old Apple II computer club. There was an old guy in the club that knew I was a ham. Someone had given him a Drake SW-4 receiver and he wanted me to come over to his house and show him how to use it and to show him what kind of antenna to put up. I asked him if he had a paper clip. He said yes and brought it over to the radio. I unfolded it and put it in the antenna jack and then proceeded to tune in half a dozen International broadcast stations-granted, it was BBC and the rest of the usual powerhouses. We ended up with about 10 feet of wire put up with thumbtacks in the roof of his back porch. He wasn't an "ultra serious" DXer, but he heard *plenty*.

Now I'm not recommending you use a paper clip, but with modern receivers and 5 to 50 feet of wire outside or your Eavesdropper, you will hear a lot. Yes, as you advance in the hobby and want to hear the 500 watt daytimer medium wave station in Pago Pago, then, sure, you will need a better antenna. But for now, enjoy!

Bush administration finalizes military attack on Iran

Wayne Madsen Report
January 2, 2006
Wayne Madsen

January 2, 2006 -- Intelligence indications and warnings abound as Bush administration finalizes military attack on Iran.

Intelligence and military sources in the United States and abroad are reporting on various factors that indicate a U.S. military hit on Iranian nuclear and military installations, that may involve tactical nuclear weapons, is in the final stages of preparation. Likely targets for saturation bombing are the Bushehr nuclear power plant (where Russian and other foreign national technicians are present), a uranium mining site in Saghand near the city of Yazd, the uranium enrichment facility in Natanz, a heavy water plant and radioisotope facility in Arak, the Ardekan Nuclear Fuel Unit, the Uranium Conversion Facility and Nuclear Technology Center in Isfahan, the Tehran Nuclear Research Center, the Tehran Molybdenum, Iodine and Xenon Radioisotope Production Facility, the Tehran Jabr Ibn Hayan Multipurpose Laboratories, the Kalaye Electric Company in the Tehran suburbs, a reportedly dismantled uranium enrichment plant in Lashkar Abad, and the Radioactive Waste Storage Units in Karaj and Anarak.

Primary target: Bushehr nuclear reactor and hundreds of Russian technicians

Other first targets would be Shahab-I, II, and III missile launch sites, air bases (including the large Mehrabad air base/international airport near Tehran), naval installations on the Persian Gulf and Caspian Sea, command, control, communications and intelligence facilities. Secondary targets would include civilian airports, radio and TV installations, telecommunications centers, government buildings, conventional power plants, highways and bridges, and rail lines. Oil installations and commercial port facilities would likely be relatively untouched by U.S. forces in order to preserve them for U.S. oil and business interests.

There has been a rapid increase in training and readiness at a number of U.S. military installations involved with the planned primarily aerial attack. These include a Pentagon order to Fort Rucker, Alabama, to be prepared to handle an estimated 50,000 to 60,000 trainees, including civilian contractors, who will be deployed for Iranian combat operations. Rucker is home to the US Army's aviation training command, including the helicopter training school.

In addition, there has been an increase in readiness at nearby Hurlburt Field in Florida, the home of the U.S. Air Force Special Operations Command. The U.S. attack on Iran will primarily involve aviation (Navy, Air Force, Navy-Marine Corps) and special operations assets.

There has also been a noticeable increase in activity at Marine Corps Air Ground Combat Center at Twentynine Palms, California, a primary live fire training activity located in a desert and mountainous environment similar to target areas in Iran.

>From European intelligence agencies comes word that the United States has told its NATO allies to be prepared for a military strike on Iranian nuclear development and military installations.

On November 17, 2005, Russian President Vladimir Putin spent seven hours in secret discussions with Turkish Prime Minister Recep Tayyip Erdogan during the the opening ceremonies in Samsun, Turkey for the Russian-Turkish underwater Blue Stream natural gas pipeline, festivities also attended by Italian Prime Minister Silvio Berlusconi.

According to sources knowledgeable about the meeting, Erdogan promised Putin, who has become a close friend, that Turkey would not support the use of its bases by the United States in a military attack on Iran. That brought a series of high level visits to Turkey by Bush administration officials, including CIA chief Porter Goss, FBI Director Robert Mueller, and Secretary of State Condoleezza Rice.

Although Erdogan listened to Goss's and Rice's pleas for Turkish logistical, political, and intelligence help for an attack on Iran and Turkish Army Chief Yasar Buyukanit heard much the same from Pentagon officials during his recent trip to Washington, the word is that Putin now has enough clout in Ankara to scuttle any use of Turkey by the U.S. for an attack on Iran. [Mueller delivered Ankara intelligence "proof" of Iranian backing for Kurdish Workers' Party (PKK) guerrillas in Turkey. Intelligence agencies and business intelligence units around the world are now discounting any intelligence coming from the Bush administration as neocon propaganda invented by think tanks and discredited intelligence agencies in Washington, Tel Aviv-Herzliya, and Jerusalem].

A U.S. Attack on Iran: The Perfect Storm for wider nuclear conflict

U.S. political and military officials have also approached Bahrain, Saudi Arabia, Pakistan, Jordan, Oman, and Azerbaijan seeking their support for a U.S. attack on Iran. Ina replay of the phony pre-war intelligence on Iraq, Washington is trying to convince various countries that a link exists between Iran and "Al Qaeda."

Polish intelligence sources report that Poland's Defense Minister Radek Sikorski assured Defense Secretary Donald Rumsfeld of Poland's support for any U.S. strike against Iran. Sikorski is a former American Enterprise Institute colleague of such neo-cons as Richard Perle, Michael Ledeen, and Lynne Cheney, the so-called "Second Lady" of the United States. Sikorski and Polish Foreign Minister Stefan Meller

assured Rumsfeld and Rice, respectively, that Poland would stand by the United States during the split in NATO that will occur as a result of the American strike. Polish intelligence sources, who are unhappy with the arrangement of the new right-wing government in Warsaw with the Bush administration, leaked the information about the recent U.S. demarche to NATO in Brussels about preparation for the attack.

Similar intelligence "leaks" about the U.S. attack plans were also leaked to the German magazine Der Spiegel.

European intelligence sources also report that the recent decision by Putin and Russia's state-owned Gazprom natural gas company to cut supplied of natural gas to Ukraine was a clear warning by Putin to nations like Ukraine, Poland, Romania, Czech Republic, Slovakia, Slovenia, Croatia, Moldova, France, Austria, Italy, Hungary, Bosnia, Serbia, and Germany that it would do the same if they support the U.S. attack on Iran. Gazprom natural gas is supplied, via pipelines in Ukraine, from Russia and Turkmenistan to countries in Eastern and Western Europe. The Bush administration charged Russia with using gas supplies as a "political tool."

Putin has additional leverage on Western Europe since former German Chancellor Gerhard Schroeder accepted an appointment to the board of a joint Russian-German North European Gas Pipeline Consortium that is controlled by Gazprom. The pipeline will bring Russian gas to Scandinavia, Germany, Netherlands, and Britain, giving Putin additional leverage over Washington in Europe.

Southeast Asian intelligence sources report that Burma's (Myanmar's) recent abrupt decision to move its capital from Rangoon (Yangon) to remote Pyinmana, 200 miles to the north, is a result of Chinese intelligence warnings to its Burmese allies about the effects of radiation resulting from a U.S. conventional or tactical nuclear attack on Iranian nuclear facilities. There is concern that a series of attacks on Iranian nuclear installations will create a Chernobyl-like radioactive cloud that would be caught up in monsoon weather in the Indian Ocean.

Rangoon (Yangon) capital moved 200 miles north over fears of monsoon season Iran nuclear fallout?

Low-lying Rangoon lies in the path of monsoon rains that would continue to carry radioactive fallout from Iran over South and Southeast Asia between May and October. Coastal Indian Ocean cities like Rangoon, Dhaka, Calcutta, Mumbai, Chennai, and Colombo would be affected by the radioactive fallout more than higher elevation cities since humidity intensifies the effects of the fallout. Thousands of government workers were given only two days' notice to pack up and leave Rangoon for the higher (and dryer) mountainous Pyinmana.

In neighboring West Bengal, the leftist government and its national leftist allies around the country are planning massive demonstrations

during Bush's upcoming trip to India. They are protesting the war in Iraq as well as the threats against Iran.

Reports from Yemen indicate that western oil companies are concerned about U.S. intentions in Iran since the southern Arabian country catches the edge of the monsoon rains that could contain radioactive fallout from an attack, endangering their workers in the country.

The Bush administration aborted last minute plans to attack Iranian nuclear and political installations prior to the 2004 presidential election. On October 9, Rumsfeld met with defense minister colleagues on the now decommissioned USS John F. Kennedy in the Persian Gulf to seek support for the attack. That meeting has been confirmed by the Danish Defense Minister who was in attendance, however, the topic of the meeting was not discussed. According to U.S. naval personnel on board the Kennedy, a special "war room" was set up to coordinate the attack. Britain, Australia, Italy, Netherlands, and Japan did not attend the meeting because of their opposition to the attack plans.

Intelligence and military officials around the world are also bracing for the results of a U.S. attack on Iran. This includes the distinct possibility of a major Shia retaliatory attack in Iraq, the Eastern Province of Saudi Arabia, Kuwait, Bahrain, the United Arab Emirates, Lebanon, and Afghanistan against U.S. military, diplomatic, and economic targets in the region. Radioactive fallout from a conventional or tactical nuclear attack on Iran will result in major problems with Pakistan, India, China, Russia, Japan, and other downwind countries in Asia and the Pacific Rim, possibly including the fall of the Pervez Musharraf government in Pakistan and replacement by a radical Islamist regime having possession of nuclear weapons. That would provoke a military response from nuclear power India.

In a counter-attack, Iran would immediately launch its Shahab I and II missiles at the U.S. Green Zone in Baghdad, the Al Udeid airbase in Qatar, the US Navy base in Bahrain, Camp Doha base in Kuwait, Al Seeb airbase in Oman, Baghdad International Airport, the U.S. base in Kandahar, Afghanistan. Iran would also launch its long-range Shahab III missiles on the Israeli cities of Tel Aviv, Haifa, Beersheba, Eilat, and the Israeli nuclear complex at Dimona. Iranian missiles would also be launched at US naval ships in the Persian Gulf and oil installations in Saudi Arabia and Kuwait.

The virtual end of NATO as a viable defense organization may also result from an attack that will drive a final wedge between Washington and Europe. And China may elect to respond financially and militarily against the United States since Iran is China's second largest source of imported Middle East oil after Saudi Arabia and plans to use an Iranian terminal for the export of natural gas from Turkmenistan. [China now imports 60 percent of its oil needs, and Iran represents 17 percent of those imports].

Russia recently participated in, through the Shanghai Cooperation Organization (SCO), a three-way military exercise (code named "Indira 2005") between Russia, China, and India to prepare for any new U.S. power projections in Asia, including an attack on Iran, a prospective SCO member. Last August, Russia and China held their first-ever joint land-sea-air military exercises.

Let's Stop a US/Israeli Attack on Iran:

With that radio you'd get the best results using the SSB modes. The
AM is OK for local stations in the daytime. S-AM mode doesn't really
work (Kiwa has a mod program for this). I listen to AMDX on my R-75
all night long in the SSB mode and it works extremely well. Use the
Dual PBT controls and the FIL button to get the most pleasant sound.

A rare occurence perhaps, but a tropical storm or even a hurricane is not unheard of in January.

On thing you Liberal 'tards have to remember is that history did not begin on the day of your birth nor did it begin on the day George W. Bush assumed the Presidency.

RHF,
The Soviets in the 1980's named President Reagan a fascist. They called him
a Hitler, a mad man. Now you know where the Left-wing
Liberal-"Progressive"-Socialist-Kommunist ilk like "Dr." DaviD found the
term while studying Kommunism in Beijing for his Ph.D..

You're in good company RHF.

I don't use "ear-buds" as they are not comfortable. I use the Sony MDR-7502 headphones for program listening.
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=7378990783
They are small as headphones go but they are bigger than the typical Ipod or headphones sold with cheap small portables. They are comfortable and seal your ear so that external sounds won't bother you. The Sony MDR-7502 have a frequency response of about 60 Hz to18000 Hz. They can be found for about $40-$50.

For shortwave, HiFi headphones are overkill and may even be a detriment. HiFi headphones were designed to reproduce full spectrum audio from around 20Hz to 20000Hz or even wider (CD's) which is the absolute maximum hearing range of a person with perfect hearing. Most people's hearing is no where near that good. In the case of shortwave DX listening, being deaf to high audio frequencies is not be a bad thing.

Using HiFi headphones for listening to shortwave or even MW & FM radio stations will cause listener's fatigue. That fatigue is caused by the hiss reproduced by the HiFi headphones from the radio's internal circuitry and is especially audible at higher volume levels. The typical shortwave radio and MW broadcast's typical audio frequency range is about 100Hz to around 8000Hz (? - someone correct me on this). Anything you can hear outside that range will be N-o-I-s-E! Furthermore on shortwave, the band noise and static crashes are in the high audio frequency range which a HiFi headphone will probably emphasize in your ears. The result - listeners fatigue.

One pair of headphones manufactured today that is designed for weak signal SSB and CW (Morse code) is the Kenwood HS-5 headphones.
http://www.universal-radio.com/catalog/head/0357.html I use them when I need to pick out a whisper in the mud. Their audio frequency response is very narrow, 150 Hz - 4000 Hz, and I do not recommended them for arm chair program listening - IMO. But effective on occasions for hearing weak broadcast stations amongst annoying band noise and static crashes. My HS-5's are just another DX "tool".

I own a Terk TV 50 antenna I bought for five dollars at a Goodwill store about a year ago.It is about seven feet long and it has a lenght of coaxial cable fasten to the middle on one side of the antenna and there is a little slide switch for Off,On, to TV, to Antenna connected to the coaxial cable and there is also a 112volts dc Terk wall wart connected to the slide switch and another lenght of coaxial cable permantley coonected to the other end of the slide switch.(the other coaxial cable connections are ordinary screw on connections) Of course the antenna is intended for use with a tv set.I wonder how well the antenna would work as a shortwave radio antenna?

This gentleman, Gary, at email: n9zsv@cei.net posted the following
list in another group, rec.radio.amateur.boatanchors

He's having tax problems, and trying to sell some of his gear.

I'd recommend any of the National HRO-series, with the 60 being the
ultimate, or the Hallicrafters receivers, or the 390 rigs.

You can google-search any of these rigs and get plenty of info.

Here's his list:

List of Boatanchors for sale as of Dec. 19th 2005

> There are no receivable time standard stations.

That I always found annoying... There's no radio station for those inexpensive auto-set radio receiver clocks to use either. You can set a clock against the hourly Kol Israel time pips. Hopefully other countries have at least one radio station with accurate time pips on the hour.

> higher parts of those bands come in loud (meter pining) and clear.

On the other hand, the steel reinforced concrete and stone facade doesn't exactly help portable radios with internal antennas. Getting some sort of antenna outside makes even more of a difference than in the US type housing construction. Probably due to the "centrally located between 3 continents" issue, I found quite a bit of adjacent channel interference for stations I wanted to listen to, last time I listened there a few years ago.

> VOA comes in loud and clear. I used to think their party line was "America
> is perfect, everyone else is not", then I started to watch Fox News. :-)

During the Gulf War, one of the VOA frequencies had Radio Bagdad in Hebrew, instead of the VOA! I gathered that it wasn't the VOA which was doing that! I walked into the VOA office and had an interesting conversation and "tour" (it's a tiny place) with Charlie Weiss (the correspondant at that point). Back in 90-91 they still had loud teletypes in the VOA office. The teletypes have been replaced by PCs a while back now.

> It seems like no one regulates AM and FM broadcasts, you you get stations

> BBC on 629 and 1323 am, but I get a better signal on shortwave.

... and the VOA on MW for a couple of hours in the wee hours of the morning...
VOA MW English was cut back for Arabic.

I have no doubt that a) Iraq will place civilians, especially women and children, near such targets and/or b) missiles and bombs will go astray and hit villages or hospitals with babies and children. Then we will later find out there were no such nuclear programs going on at those sites and we will once again look like assholes to the world.

491. Re: RARE admission by Radio Mart L@@K

Newsgroup: rec.radio.shortwave
Date: 2006-01-04 01:59:33 UTC
From: sdaniel13@nyc.rr.com
Message-ID: <1136339973.429783.123380@g47g2000cwa.googlegroups.com>
Source record: 57193

One problem with the ebay feedback system is that people are often afraid to negative feedback for fear of receiving negative feedback in retaliation. And someone who sells as much stuff on ebay as Radiomart is well positioned to fight the negative feedback war. He can "absorb" more negative feedback without serious damage to his overall rating than someone who's bought/sold a hundred or so items over the last few years. If you go up against him with feedback, you're at a definite disadvantage.

Considering his activity, having only 6000 positives
in 6 years is a pretty darn low number out there. He's
got 32 items right now for sale and it comes in waves.
With the expectant average of 83 or so positives
per month to make 6000 total, having 32 items for
sale right now on Jan 3rd with the rest of the month
to go seems to imply that he sells a lot more per month
than he gets feedback on.

I'd like to know if anyone has gone and actually shown up at his door to pick up the item purchased. He's close enough; if he were good, he could go to Dayton and do very well.

I don't teach, but if I did, I'd tape some international
broadcasts and use them from time to time. Some
of the ham broadcasts from Chernobyl would be
useful in pointing out how different the reality
was from the official Radio Moscow view. Radio
Pyonyang would be useful as well as the Lincolnshire
Poacher and the Disaster Net used during Katrina
and Rita. Getting people to think beyond their
cells and Blackberries and laptops would be
useful.

I have a Four Star 12 transistor made in Japan AM/FM radio I want to try out.The plastic battery holder holds four AA 1.5 volt batteries and the battery holder has a connector on one end that is similar to a nine volt battery.The wire springs battery contacts are completely corroded and one of the connectors on the battery holder has corroded completly away.I guess Radio Shack might sell plastic battery holders that might work ok.

I'm so happy for you. Where I live I can get 2 AM signals cleanly at
night, KNX and our hideous KHTS 1220. KFI has sky/ground
cancellation. Everything else is DX and subject to selective fading
all evening long.

TROPICAL STORM ZETA DISCUSSION NUMBER 19
NWS TPC/NATIONAL HURRICANE CENTER MIAMI FL
10 PM EST TUE JAN 03 2006

ZETA IS A TENACIOUS CYCLONE AND BASED ON DVORAK CLASSIFICATIONS THE
WINDS ARE AT LEAST 55 KNOTS. THE CLOUD PATTERN IS IMPRESSIVE AND
CONSISTS OF AN AREA OF MODERATE CONVECTION NEAR THE CENTER AND A
CYCLONICALLY-CURVED CONVECTIVE BAND TO THE NORTHEAST. THE OUTFLOW
REMAINS ESTABLISHED AND THERE ARE NO SIGNS OF STRONG SHEAR. THE
GFDL INSISTS ON MAKING ZETA A HURRICANE AS AN UPPER-LEVEL SHARP
TROUGH APPROACHES. THIS COULD BE A CASE OF TROUGH INTERACTION
AIDING INTENSIFICATION. I WILL NOT BE SURPRISED IF THE GFDL
SOLUTION TURNS OUT TO BE CORRECT. IT HAS ALREADY BEAT ME A FEW
TIMES. HOWEVER...FOR THE SAKE OF CONTINUITY ONLY...THE INTENSITY
FORECAST KEEPS ZETA WITH 55 OR 50 KNOTS FOR THE NEXT 24 TO 36 HOURS
WITH A WEAKENING THEREAFTER.

ZETA IS MOVING WEST-SOUTHWEST OF 250 DEGREES AT 4 KNOTS STEERED BY A
LOW-LEVEL RIDGE. A GENERAL WESTWARD TRACK SHOULD CONTINUE FOR A DAY
OR SO AND THEN A NORTHWEST TRACK SHOULD BEGIN AS A STRONGER RIDGE
DEVELOPS NORTHEAST OF ZETA. AS THE TROUGH GOES BY...ZETA COULD TURN
BACK TO THE WEST OR WEST-NORTHWEST BUT BY THEN...THE CYCLONE SHOULD
HAVE BECOME A REMNANT LOW.

Etymotics are very comfortable. They use a soft plastic that goes in
your ear. This is how they isolate sound at the same time.

The problem with Etymotics was the price, but I think the patent ran
out because there are now cheap Chinese copies. A pair of Etymotics
used to be about $300. Now they are mail order under $90.

BS,

READ - The Big Lie Concerning Iraq Was Saddam Husseins !
http://groups.google.com/group/rec.radio.shortwave/msg/c5dec276a3cb5838

Simply Saddam had a WMD Program and continued to create the
myth that he had a WMD Program in order to retain power in Iraq.

All the Worlds Intelligence Organizations :
Prior to the Iraq War - Believed that the House of Cards
{a charade involving all the likely suspects} that was
created by Saddam; was most likely very real.

Pre-War Iraqi WMD Threat Assessment :
A High Probability plus a High Potential for Action.

Point-of-Fact :
Saddam's misinformation campaign about his WMD Program was
better than everyone else's information gathering and evaluation
process of his regime's WMD assets, capability and potential.

Saddam Won the War of the Big Lie . . .
However He Lost His Country as a result of it [.]

>

Perhaps.

OTOH, I've given negative feedback every time I've not gotten what was
expected on Ebay, and I've never had any problem with future transactions.
Granted, most of my dealings there have been very good, so my feedback seems
to be accepted as honest.
Bottom line: this cat hides all his transactions and anyone foolish enough
to deal with that kind of seller deserves whatever screwing he gets. Then
again, if the guy is delivering the goods,what's it to you if people are
paying more than something is worth? The worth of Anything is what someone
is willing to pay for it. There is so much in this world to rally against
beyond some dishonest seller of goods. Move on...

Filters stop the ear wax. They have been selling Etynomics for about 20 years, so this isn't a big deal.

All earphones need maintenace. Most of the earbuds are so cheap that when the foam rots, you just buy another earbud. The over the ear phones need to have the seals replaced eventually. The plastic gets too hard to make a seal. The open air headphones like the Grado models mentioned need new foam every few years.

My grado SR125s have become electrically intermittant and they are not field servicable. I'l get around to fixing them, but I've been really happy with the Etymotics. They supply a small case for them so that you can just stuff them in your pants pocket when not in use.

http://www.etymotic.com/
http://www.etymotic.com/pdf/er6-isolator-manual.pdf
http://www.etymotic.com/pdf/er4-userguide.pdf

I had the opportunity to try both the ER6 and the more expensive ER4. I couldn't tell the difference, even though the published specs are quite different.

As you reminded me in email (but I wanted to mention here), the hourly
pips don't help with radio adjusting.

I guess the answer depends on whether you are a collector or user of radios. A current model Sony 7600 or Degen DE1103 would provide equal performance for a lot less money. OTOH a collector of Panasonic radios, like the collector of Zenith TO's might be willing to chase the price if the radio would fill a void in his collection.

You apparently have insight into what motivated the high bidder. Maybe you would care to share those thoughts.

BTW, there is a Panasonic 8000 that is listed for close to $5,000 on Ebay. To me the Panasonic 8000 is comparable to the Panasonic 5000, numerous Sony luggables and the many Zenith TO's produced over the years. They are all nice sounding below average performing radios that to me might be worth one hundred dollars as a tabletop radio. But I'm not a collector and I know collectors will chase nice versions of those radios to high prices.

I know that ham broadcasts from Chernobyl were
rebroadcast on NPR; that was one of the reasons
why I started getting interested in shortwave. It
wouldn't surprise me if some SWLs had taped
some of the broadcasts of Radio Moscow at the
time, too.

I dont know if it's true or not,but about thirty years ago,I read an article in a magazine that the Russian maps had the names of Russian towns and cities on the maps where the cities and towns were really not there.For instance,that nuclear plant near Chernonbyl isn't really near Chernobly,it is really near a town of a different name.They did that to confuse foreigners and spies.Anyway,I did read about that in a magazine.

Whenever you are using earbuds and the radio is turned on and if you remove the earbuds from your ears,it isn't a good idea to let the two eabuds get too close to each other.That can cause an electronic (a resistor or whatever the part(s) are) part in the radio to malfunction or stop working.

Sorry about posting this here, but it's the closest newsgroup category I could find where I thought there'd be some telcom experts.

From upstate NY, I've been trying to phone an acquaintance in Panama for the past 5 days. I know I'm dialing correctly:
011-507-XXX-XXX, where the X's represent the phone number. No matter what time of day, or how many times I try, I get the "All circuits are busy - try later" message. (I think the message should say "Both circuits are busy"!)

Sounds like this is a great reason for two people to have shortwave radios. But meanwhile....other than satellite phones, how does one get in touch with someone in Panama? Maybe there's no good answer. I needed to rant.

I've used ones purchased at the Home Depot with
success. If you don't have a sledge hammer, it can
get pretty darn tedious hammering it into clay (like
I've got locally). An electrician friend had the hammer
end welded to two sections of pipe, so that all he
had to do was fit the pipe over the ground rod and
basically let gravity do the work for him as needed.

The Bell South woman next door to me bought a copper grounding rod at a Home Depot store.I think the rod is about eight feet long and it has a pointed end on one end of the rod to make it easier to drive it into the ground.I got my sledge hammer and she and I took turns driving that rod into the ground.We have some clay in our soil too.Durn clay,when it gets wet,it expands and when it gets dry,it shrinks.These old houses in my neighborhood shift around like a boat on the water.I can stand in my front yard and line up the front of the houses on my side of the street and it is easy to see the houses have long since been out of plumb.

Hi, Doug.
Don't assume the problem is in Panama. It may be right next door to you.

We used to live in a VERY fast growing area East of Seattle. The phone company could not put in enough lines to support the service to their central office, so they installed what was a large PBX system to support our area. When we dialed, the PBX was sometimes overloaded and would return a busy tone after the first couple of digits were pressed.

If you live in a similar growing part of NY, your CO, Central Office, my just be out of capacity. The same situation could be found anywhere along the way to making the connection to Panama.

One way around the problem is to use a cell phone to access the Panama number. They may use different circuits, particularly if the cell phone is digital like NEXTEL>

Best regards,
Paul in Central Oregon

Wouldn't I have the same problem calling anywhere else around this country,
or places like Puerto Rico or Mexico, which I call frequently and with no
problems at all?

>
> One way around the problem is to use a cell phone to access the Panama
> number. They may use different circuits, particularly if the cell phone

I tried that - I use Sprint, and got a message saying "Your service does not
include this blah blah blah". :-)

It looks like you are missing one digit in your number. Phone numbers
in Central America now follow the same pattern as in North America, if
you think of the country code (507) in this case, as an area code,
followed by a 7-digit number. In any case, if your party's phone
number is listed, an international operator should be able to help you.
Good luck.

RK

Sorry - I left out an "X: when I typed the message. There are, in fact, 7
digits after the area code (507).

Are you usually able to call this person ?? Or is this the first time you
have made such an attempt?? It may well be the problem is the gateway to
Panama has too few trunkls to support the hgih volumes of seasonal traffic
that are probably occuring due to Chrismahanukwanza.

Check out www.soundbytes.org - a great show on WHAM AM radio here in
Rochester NY. They have a toll free number, too. In all the years I've
listened to them, I don't recall their ever being stumped by a question.

Although it's more expensive, if you *must* get through, try asking for
operator assistance rather than direct dial. If they can't get a circuit
either, it should cost you nothing.

If you are lucky enough to own (or have a friend that owns) a hammer drill with a big enough chuck (5/8?) to take the ground rod, it will make *very* short work of the job...

1) If *you* know of this, would it be a fair assumption to say that the gummint knows about it too?

2) Furthermore, if there were, as you said, "many hundreds" of trucks, would it also be a fair assumption to say that a) they would show up in satellite pictures and b) the gummint would have access to said pictures?

If either or both of the above is true, then please explain why, in December of '04, the gummint said "No WMDs, we'll just run with Saddam being a bad guy", rather than sticking to their guns and sharing your WMD "proof" with the rest of us???? It certainly would have carried more weight than the weak excuse about Saddam...

Let me see if I understand you correctly...

We invaded *their* country and then rammed democracy down their
throats and yet you say "we gave them a chance to choose it"?????

Funny, but I don't remember kings or tribal lords being on the ballot.

Stop obsessing, 'tard boy.

If I were you (and thank goodness I'm not) I'd call 911. They could send some folks out with a device known as the 'Jaws of Life'. With that, and a bit of luck, I'm certain they would be able to pull your head out of your ass.

Excuse me? "Warm", "almost got it". That dead and mutilated have suffered for a worthy cause that some including *you* don't seem to understand in no way diminishes their sacrifice or the praise of the people that do understand. No ideological mental gymnastics can change the intent of our servicemen's desire to serve their country.

Cindy's point is to denigrate her son and our other dead and maimed serviceman's sacrifice for political gain. You, Cindy and the other confused individuals will just have recognize that her son and other servicemen voluntarily risked their lives for the cause of defending this country and no type of political or historical revising of their service to country can change that.

If you can't understand that this is a human issue of duty and service to country being perverted on the altar ideological differences then there is nothing I can say to change your mind. People that have a problem with this issue need to spend more time being introspective and less political in their thoughts.

Feel free to have the last word I'm done with this thread.

A pipe threaded and capped at one end fitted over the rod works great.
Works great when the city puts in new signs.

When you shove an ear-bud in your ear be sure to keep the sound level
low or risk hearing damage since their is nothing to diminish the sound
energy reaching the ear drum. The rule to follow is give your ears a
chance to adjust to lower volumes.

You have a pretty good radio and antenna.

From either the antenna specifications or general reception on the
bands determine where the antenna is not working as well and put up
another wire antenna to make up for it. If it is the smaller version of
the Eavesdropper then put up a loop or folded dipole for the lower
bands if that interests you.

Home Depot and Lowe's Home Improvement both sell 8 foot copper plated
rods of good quality. Or any electrical supply store sellsl them.
Radio Shack has them, but the one I bought there rusted easily.

Driving them in the ground is another matter. I have an official
ground rod driver that I got from Glen Martin, the tower people. It's
a piece of pipe that fits over the rod, and has handles on each side
so the pipe can be pounded on the rod, driving it down. Similar
devices for driving metal fence posts into the ground are available
wherever fencing supplies are sold.

Or, you can just pound the thing in with a hammer, and a little help
from the garden hose.

I have solid rock about one foot down -- I ended up just putting down
a short piece of copper pipe, then attaching two buried, 70-foot wires
to the pipe. If you can't go down, go horizontal.

Instead of simply zapping individuals, zap topics.
If you use certain keywords to zap the topics,
it'll improve things quite a bit.

There are very few people here who post completely
off topic. There are a couple who mostly do it, but
no one who's completely off base.

Are you looking specifically for an SLBC QSL, or simply a QSL from Sri Lanka?

If the latter is the case you might try to pry one out of Radio Free Asia, Voice of America, Deutsche Welle, Radio Liberty, Radio Japan, or Radio Farda.

Hi Roald,

The Eton E1 can be purchased at the Sharper Image.

http://www.google.com/local?hl=en&lr=&safe=off&rls=GGLC,GGLC:1969-53,GGLC:en&q=sharper-image&near=San+Francisco,+CA&sa=X&oi=localr

Also, Ham Radio Outlet has nearby locations in Oakland and Sunnyvale.

The other possible problem is your long distance company. If you are subscribed to one of those dirt-cheap long-distance companies that may be your problem.

Most dirt-cheap long-distance phone companies purchase time/bandwidth from the major long-distance companies (AT&T). The agreements that they make amongst themselves vary from contract to contract between different long-distance companies. One parameter of this agreement can be something to the effect as "low priority" traffic. This parameter means that "if there is free time/bandwidth" then this company can complete your calls. If the trunks are busy then that "valuable time/bandwidth" is available FIRST to the company that paid more for a higher priority and the consumer, you, pay a higher rate. In your case it may be that your long-distance company has a very cheap rate agreement (low priority) to Panama with the resulting consequence that you can not complete your call. It has happened to me which is why I now choose only a major long-distance carriers (AT&T).

588. SW Broadcast Schedule Software?

In case anyone is interested in obtaining a QSL from the AFN outlet on Diego Garcia, here is an address that worked recently for Wayne Bastow in Australia:

ICC(SW) Donald Dolney, Chief Engineer
Naval Media Center Broadcasting Detachment
Diego Garcia

Wayne also included $US2 for return postage.

(Wayne Bastow via dxldyg)

I'd append the address with (Indian Ocean) myself.

In the past election fraud has been fairly small scale and labor
intensive. Say, people with residences in two states voting in both,
or in Ohio in '04 people were going to universities, registering
students, and throwing away the apps. of those who registered
Democrat, and the like. Now, thanks to the power of modern computers,
anything is possible with a few strokes of the keyboard.

WGN Radio 720 kHz - The Voice of Chicago

Program: Extension 720 with Milt Rosenberg
When: 9PM CST, Wednesday, Jan 4th (0300 UTC Thursday, Jan 5th)

- Tonight's Discussion -

PHILOSOPHY OF MIND
Rene Descartes declared in his philosophical writings ﷺcogito, ergo sumﷺI think, therefore I am. But how does a human being come to think? Where does consciousness come from? And how do various philosophers account for human rationality? Tonight, we will be discussing the long history of epistemology and philosophy of mind with two experts: DAVID HILBERT, professor of philosophy at the University of Illinois at Chicago, and DAVID FINKELSTEIN, professor of philosophy at the University of Chicago.

I have NO idea how my name got in the top six of that list. It must be a defective statistics program, as I don't merit more than a twentieth place. Nineteenth at best.

On a more serious note, recently I've been trying to follow the example set by two other members of this group who have made a conscious effort to be nicer to their fellow human beings. In that vein, I will not be feeding or commenting on any more insulting or negative postings by anyone.

It's a waste of time and instead of modifying behavior, just causes more stupidity.

Let's see how it goes.

No, I didn't miss the news today--I read the WSJ daily. But...so what?
...and what *is* your point?

Are you naive enough to believe that the Dow going up a few lousy points for a day or two is making Ford/GM stronger, is going to give jobs back to the 40,000 or so 'downsized' out of work people, will re-open all the auto plants that have closed and will be closing, take three national airlines out of bankruptcy, and put that out-of-business airline back in business? Nice try, but sadly, I think you'll find it's not quite that easy. :-(

If you want to quote *meaningful* financial news, try 'splaining away the long vs short term bond interest inversion and the negative U.S. savings rate (first time since 1929), neither one of which bodes very well for the economy.

Puh-leze, do yourself a favor and take off those rose colored glasses...

The economy is in good shape. The US markets are all on an upswing not crashing.

> Are you naive enough to believe that the Dow going up a few lousy points

> easy. :-(

There are always job losses. Some sector is always having a problem but they are offset by other sectors in the economy.

> If you want to quote *meaningful* financial news, try 'splaining away
> the long vs short term bond interest inversion and the negative U.S.

People are investing in stocks and bonds and not putting their cash in low interest rate savings accounts. People are also investing in the housing markets and other than mortgages the borrowing rate is low. Altogether individual wealth has increased.

> Puh-leze, do yourself a favor and take off those rose colored glasses...

Need anything else explained let me know but it would be better if it was about short wave.

I've probably thrown away $60 worth of ear buds over the years (3 pairs, $20 a pop). The foam wears out, you can't get replacements, or they hurt my ears so I stopped using them. I've used the over the ear type, the ear hugger around the ear type, and some no-name brands. I actually use the ER6.

The ER6 is $90 on the street. Expensive, but not really obscene. Since they have isolation, I wear them at air shows so I can hear the scanner over the aircraft noise.

I've been using these with the 7039+ and they sound pretty good. They
use a silicon rubber cushion that does not break down like the foam.

Source record: 57360

Sent the old-stock unit back to Universal on 12/23/2005. Got a call from Universal (Tony) on 12/28/2005 (five days later) that it had been received and a new unit was available and on its way.

Called today (1/04/2006, 12 days after old unit sent to UR, 7 days after being old new unit was "on its way") to order some additional parts.

Asked about status of replacement, which I had expected to be delivered last Friday. Hadn't shipped yet. MIGHT ship THIS Friday. If so, would get here 1/10/2006, 2.5 weeks after I sent in old unit, two weeks since I was told it was available and "on its way." (note I am 2 days by UPS GROUND from Universal).

Note original unit was ordered December 5th, online, from Universal. Now going on one month since order and no unit.

I've been a customer of Universal for a decade and a half. I don't know what's going on over there.

greg

That style hurts my ears. I simply end up throwing them away. You can
wear the ER6 for hours at a time (plane trips for instance).

At the moment, the Shure Chinese copy is about the same price at the
ER6. In fact, Etymotic would still be peddling $300 ER4s if Shure
didn't come out with copies. I never tried the Future Sonics, but
apparently they hold the high end market of ear buds. It's what
musicians wear in concert in sets ups where stage monitors are not
used.

At least the shack sells replacement fittings.

The Grado SR60s are like $70 from headroom. The pads are $10. I'd go
that route if you can't justify $90 earbuds. The SR60 sound is better,
but you look like a dork wearing headphones in public. Nobody can see
the ER6.

Support this with some facts, if possible. Sounds like a fantasy not
based on reality.

Obviously, the gases in the atmosphere can let solar energy in. The solar energy is re-radiated from the surface of the planet at longer wavelengths (less energy) which CO2 and other gases can keep in. All life on this planet is the result of the atmosphere being able to keep in some of the re-radiated energy. How do you propose to use this re-radiated energy to heat a house or run a car?

You might want to take a look at the effect of the explosion of Krakatoa had on the planet and reconsider the above statement.

Magical properties? The ability of CO2 (and other gases) to keep in infrared energy is well-documented. In fact, every human that is and has ever existed depends on the ability of certain gases to keep in a certain percentage of the energy that is re-radiated from the surface of the planet.

You are good for a laugh! Just because a substance can trap in some wavelengths of radiation doesn't mean that it can do so for all energy wavelengths. No, CO2 is not useful as a "solar collector" and yes, it does prevent certain infrared wavelengths from escaping back out into space. All you have to do is to look at the IR spectrum of CO2 to see that it does absorb certain wavelengths.

Google for this, there are some interesting sites about installing ground rods. It took a couple of weekends for me to get 8' into the TX dirt, drove a little, drank a little, feel down, start over. I stopped short of where I originally wanted it to go with about 1.5' sticking out of the ground with a big ass ground wire coming into the house and installed on a "ground plane" in the room.

Source record: 57376

Well, apologies to dxAce
Kathy Otto, my contact at Sentech confirms that they do indeed put out the transmission on 7380 Khz Wednesdays and Saturdays on a giant 250 Kw TX from Meyerton.

On expressing my amazement that a government TX would put out hostile propaganda I was told
"they pay - we transmit - we don't monitor clients program content"

But I remain sure that if the Nigerian government complained to our government and put pressure on them, they would embargo the transmissions.

M II,

Point One - I do not concede to the Islam-O-Fascist that
"Allah" Hates America, or Canada or any other Nation.

Point Two - When I use the Word [God] as a Christian :
I Mean God {The Father} of My Lord and Savor
Jesus {The Christ} -and- Thusly I Say :
God {In The Name Of Jesus} Bless America - Amen.
- - - For I Believe That A Good Christian
Can Also Be A Good American Citizen.
[Naturally it goes without saying a Good Christian
Can Also Be A Good Canadian; French; Russian;
Mexican; Australian, etc Citizen.]

Point Three - The insertion of the Word [Allah]
after {God} simply means that I can recognize
that at A Good Muslim Can Also Be A Good
American Citizen.
[Naturally it goes without saying a Good Muslim
Can Also Be A Good Canadian; French; Russian;
Mexican; Australian, etc Citizen.

Point Four - To My Simple Way of Thinking : The
Muslim Religion and American Constitutionalism
are NOT Mutually Exclusive.

m ii - i am glad that you ask ~ RHF

THAT SOMETHING EXTRA :

All Persons-of-Faith Can Ask For The Blessing
Of Thier Individual and Personal 'god' for America.

God {Buddha} Bless America
http://en.wikipedia.org/wiki/Buddha

God {Jehovah} Bless America
http://en.wikipedia.org/wiki/Jehovah

God {Confucius/Tao} Bless America
http://en.wikipedia.org/wiki/Confucianism
http://en.wikipedia.org/wiki/Taoism

God {Yahweh} Bless America
http://en.wikipedia.org/wiki/Yahweh

God {Allah} Bless America
http://en.wikipedia.org/wiki/Allah

God {Brahma/Vishnu/Shiva/Rama/Krishna} Bless America
http://en.wikipedia.org/wiki/Brahma
http://en.wikipedia.org/wiki/Vishnu
http://en.wikipedia.org/wiki/Shiva
http://en.wikipedia.org/wiki/Rama
http://en.wikipedia.org/wiki/Krishna

God {The God of Abraham} Bless America
http://en.wikipedia.org/wiki/Judaism

God {Ek Onkar} Bless America
http://en.wikipedia.org/wiki/Ek_Onkar
http://en.wikipedia.org/wiki/Sikhism

Earthlink. Should be no problem there :-)

629. Buried Copper Wire {Flexible} Ground Rod without a Hard Rod

Newsgroup: rec.radio.shortwave
Date: 2006-01-05 10:27:52 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1136456872.254112.172880@g49g2000cwa.googlegroups.com>
Source record: 57379

Buried Copper Wire {Flexible} Ground Rod without a Hard Rod.

TIP - If your are installing a Sprinkler System in your Yard
or under your Lawn Area.

Then install a # 8 AWG Bare Copper Wire at the bottom of
the open Trenches.

Starting with 50 Feet of # 8 AWG Bare Copper Wire
* Cut the Wire in Half at the Mid-Point = Two 25 Ft pieces.
* Take one of the 25 Ft pieces and Cut this Wire in Half
at the Mid-Point = Two 12.5 Ft pieces.
* Take one of the 12.5 Ft pieces and Fold it in two =
One Double 6.25 Ft piece.
* Take the Three pieces of wire and bundle then together
with the Four Cut Ends Flush.
* Affix a Hose Clap Near this Flush-Ends and another
Hose Clamp about 2" from the Flush-End.
* Starting just below the Second Hose Wrap the Bundled
Wires with Tape for about 6" to 8".

Starting at the location (The-Spot) where you want the
Ground Wire Bundle to connect to the House and/or
Antenna being placing the Wire Bundle with the Flush-End
at The-Spot and continue to lay the Wire Bundle into the
Trench covering as much length and area as you can.

Salt the Earth at the bottom of the Trench.

Install your Sprinkler System.

Fill the open Trench with Dirt and Water and tamp down.

I use Frontier, my local phone company. Obviously, this isn't conclusive
information, since some "big" companies actually behave in many ways like
cheap LD carriers. :-)

Just how high is that horse of yours?

I am neither a dealer or a hamfest tire kicker. I am a collector of sorts. And as a result, I was suckered in by an older Yeasu FT-401 transceiver, "Mint, Restored. I have gone thru this rig and replaced all tubes that needed to replaced, and fitted a new T/R relay."

What I got was a filthy rig in better than average condition, but not mint. The CW filter is non-functioning, the finals were flat(his "new "tubes gave me 10w out on 80m), and the T/R relay is original, not a NOS replacement as he claimed. A bad solder joint in the mixer stage rendered it inoperable until I corrected it.

If you don't think Martin threatens negative feedback, look at his recent feedback to see how many negatives are posted as neutral, or even positve feedbacks. I'm on his "blocked bidders list" because I posted my complaints as negatives, and I can live with that. Ebay would be a safer place if everyone posted negatives that were deserved.

I have a hard time putting this message into any context, but I *think* you're talking about what the rest of the world calls a "radial". Usually these are arranged, well, radially, but even if there's just one it's colloquially called a radial (I think "counterpoise" may be more correct.)

Tim.

What it means to John Kerry, Wesley Clark, and Bill Clinton if Bush wiretapped CNN's Christiane Amanpour
by John in DC - 1/04/2006 03:23:00 PM

As reported below, NBC's Andrea Mitchell - based on some information she clearly hasn't yet made public - is asking if Bush specifically wiretapped CNN's Christiane Amanpour. The fact that the question was asked so publicly and so specifically means that Mitchell knows something.

Why would Bush do this? Because, as I reported a few weeks ago, journalists have some of the best contacts out there and it's not unusual for journalists to talk to both sides of the story, or in this case, the good guys and the "evil doers." What a better, if not illegal, way to find the terrorists and their associates?

But before you say "yeah, go for it," consider the implications of tapping Christiane Amanpour's phones:

1. Such a wiretap would likely include her home, office, and cell phones, and email correspondence, at the very least.

2. That means anyone Christiane has conversed with in the past four years, at least by phone or email, could have had their conversation taped by the US government.

3. That also means that anyone who uses any of Christiane's telephones or computers (work or home) could also have had their conversation bugged.

4. This includes Christiane's husband, former Clinton administration senior official Jamie Rubin, who was spokesman for the State Department.

5. Jamie Rubin was also chief foreign policy adviser to General Wesley Clark's presidential campaign, and then worked as a senior national security adviser to John Kerry's presidential campaign.

6. Did Jamie Rubin ever use his home phone, his wife's work phone, his wife's cell phone, her home computer or her work computer to communicate with John Kerry or Wesley Clark? If so, those conversations would have been bugged if Bush was tapping Amanpour.

7. Did Jamie Rubin ever in the past four years communicate with any elected officials in Washington, DC - any Senators or members of the US House? Any senior members of the Democratic party?

8. Has Rubin spoken with Bill Clinton, his former boss, in the past 4 years?

Now you understand how potentially broad a violation of privacy the Bush doctrine on illegal domestic spying really is. Everyone who's anyone is a degree or two of separation away from a terrorist.

You could buy an inexpensive plastic water pipe adapter (less than a dollar)that has threads on one end of the adapter and a long (I think they are sold in lenghts about ten feet long) rigid plastic water pipe at a Home Depot store (or similar stores) and see if a plumbing shop will glue the adapter onto the pipe for you.Screw the adapter onto a water hose and turn on the water.That will make it easy to "predrill" a hole in the ground for the metal grounding rod.Some plumbers use a similar technique to "predrill" holes underneath sidewalks so they can run wiring or metal pipes/tubing under sidewalks.Hey,if ya strike oil,dont forget about me.

>Are you looking specifically for an SLBC QSL, or simply a QSL from Sri Lanka?

If the latter is the case you might try to pry one out of Radio Free
Asia, Voice
of America, Deutsche Welle, Radio Liberty, Radio Japan, or Radio Farda.

dxAce
Michigan
USA <

I like your term "pry" :-) Finagle is another that comes to mind.

Well, I was hoping for a verification from what I consider to be the "home" station, SLBC or "Radio Sri Lanka." Besides being the home station, I think it qualifies as a better catch due to its lower power and slightly more specific target area/audience.

I agree, the other more international-style broadcasters would be a better bet - I am sure VOA would provide one for one of their easily-heard transmissions. If SLBC does not pan out (and even if it does) I'll go for one or more of the others too.

Thanks!
Bruce

649. Sangean : differences between PT80 and ATS505/606 ?

Hello everyone,

Can somebody give me some links to reviews giving the differences between these radios ???

Basicaly, the Sangean PT80 seems to be close to the 505 or 606 made by the same manufacturer...

Are the differences "internal" ?

Thanks in advance,

Charly

Most all my life I've been within a short distance of Chicago. You'll pardon me if your words, "fairly small scale and labor intensive", ring hollow. In this state of 12.4 million people, I wouldn't be a bit surprised to see a Democratic candidate win by 13.5 million votes. Even as far back as 1928, Al Capone poked fun at Chicago's heritage of vote fraud, saying, "Vote early and vote often."

But your point about the voting machines is quite valid. Nearly every sane person who's looked at the situation has deplored it.

> *We* invaded *their* country and then rammed democracy down their
> throats and yet you say "we gave them a chance to choose it"?????

Yes.

> Funny, but I don't remember kings or tribal lords being on the ballot.

We went in and deposed a murderous dictator. Now that we're installing democracy there, they have the power to vote themselves any form of government they want. One simple referendum, and Bozo the Clown is Lord High Emperor For Life if the people want it. They can even vote Saddam Hussein back in as murderous dictator, with only a few simple changes to the constitution.

If you say so. But they named that segment of space the Clarke Belt. And no
one else seems to mention Verne when discussing geosynchronicity.

Cover a large amount of water with a magical layer of CO2, which you
treehuggers claim lets solar energy into the water but not back out.
Use the extreme resultant heat to heat the house, run turbines to
generate electricity, generate hydrogen to power your automobile, etc.

>> Careful with those volcanoes. Mount St. Helens put the lie to "nuclear
>> winter".
>
> You might want to take a look at the effect of the explosion of Krakatoa had on
> the planet and reconsider the above statement.

Woweeeeee. It lowered global temperatures by 1.2 degrees C. Contrast that
to what the nuclear winter "scientists" claimed; that one ten-megaton
nuke could cause nuclear winter, blackening the earth's atmosphere for
decades. Yet Mt. St. Helens is estimated to have had as much energy and
to have distributed as much ash as a 65-megaton nuke, and no nuclear
winter. And Krakatoa spewed unimaginable quantities of ash around the
entire world ("bbbillions and bbbillions" of it!), and still no nuclear
winter.

Having taken a look at the effect of the explosion of Krakatoa on the
planet and reconsidered the above statement, I stand by it because the
facts support it.

If CO2 lets solar energy in but not out, then let the environazis use it
to heat their homes and run their cars and they can quit emitting CO2.
It'll be so inexpensive that the rest of the world will follow.

> the IR spectrum of CO2 to see that it does absorb certain wavelengths.

It can't warm a large tub of water, yet it can overheat the entire world?
Talk about "good for a laugh". Krakatoa virtually obliterated the sun, and
it only caused a 1.2 degree change in global temperatures; yet a little
transparent (by comparison) CO2 is going to cause enough temperature rise
to kill everything on the earth? (And without getting the water too hot!)

Just how stupid do you think I am?

Anyone who believes that the best efforts of all mankind could change the
climate more than the tiniest amount is an incredibly arrogant fool. Those
who believe that our just living here and using the fruits of the Earth
are causing major climatic change are much more arrogant and much more
foolish. Of course, there are also those who know better, but still insist
that mankind is causing major climate change for the purpose of imposing
their will on the rest of mankind. They had better hope there is no God.

Yes. All the above doomed industries are being eaten alive by the cancer of
socialism. There is no amount of money that can support socialism; wherever
it breaks out, the only cure is to let it eat its host until its host dies,
then hope the surviving victims manage to learn from the experience.

I'm not certain either. As recently as a few years back, they were using something like a 15 or 25kW xmtr on 19m (15425, IIRC), but since have (1) upgraded to 80 kW or thereabouts and (2) apparently abandoned that frequency. Now I hear them on 31m using the 80 kW, same timeframe, coming in *about* as good as they used to around sunset on the older lower power xmtr. Of course, I was able to hear some Sri Lankan hams on 20m about the same time as the 19m transmissions, so I presume that frequency and time was a sweet spot for both the transmitter, the propagation and the receiver/antenna system (my DX-Ultra antenna is a honey on 19m, its best wavelength). It still is a sweet spot for signals from that part of the world to here, even with the sunspot cycle at it's current near-minima state.

Years and years ago,my old buddy's son installed an AM/FM stereo radio in his car.It wasen't but a few months later the radio started cutting in and out.One of the speaker wires on one of the stereo channels had come loose.I once bought a sound amplifier (it looks sort of like a tiny transistor radio) from a Radio Shack store,the gadget requires either earbuds or earphones,it doesn't have a built in speaker.I left it turned on one day and the earbuds too close to each other,the gadget started cutting in and out (I took it back to Radio Shack and got another one) just like that stereo radio did.That is how I know it isn't a good idea to leave a radio turned on and let the earbuds get too close to each other.Ever since then,if I am using earbuds,I take pains to make sure they dont get too close to each other.

I remember them having a program of older pop music which was interesting to
listen to considering where it was from.

I just checked the QSL's and actually 'discovered' yet another from Sri Lanka.

This one is for reception of the Radio Monitors International DX Program
broadcast by SLBC 11735 kHz, 35 kW, v/s Jose Jacob (1983). It's a Radio Monitors
International QSL.

The AWR QSL 11735 kHz signed by Jose Jacob also shows 35 kW (1983). It also has
an AWR stamp reminiscent of the old EKKO stamps attached.

The SLBC QSL 9720 kHz does not show a transmitter power (1987).

Tim,

Yes a more common name would be a Radial.
Although, in most instances a Ground Radial
is often connected to a Ground Rod.

The Counterpoise is usually required to lay
directly below the Wire Antenna Element.

What 'i' have called a Buried Copper Wire
{Flexible} Ground Rod without a Hard Rod :
Ends up being Four # 8 AWG Bare Copper
Wires {= 0 AWG} for 6.25 Feet that tapers
into Two # 8 AWG {= 4 AWG} Bare Copper
Wires {= 0 AWG} for another 6.25 Feet that
tapers into One # 8 AWG Bare Copper Wires
{= 8 AWG} for 12.5 Feet that tapers for a
Total Length of 25 Feet.

X
|_____ 25Ft.
|_____ 12.5Ft.
|_____ 6.25Ft.
|_____ 6.25Ft.

IMHO - This Four Wire Buried Copper Wire
{Flexible} Ground Rod Set-Up can be as
effective as a Solid Ground Rod that is 8 Feet
Long and driven vertically 8 Feet deep in to
the Ground Soil. In some areas it may be more
effect.

The [KEY] to the whole set-up is "If" you
are doing all the work of digging trenches
for an in-the-ground Sprinkler System.
Then 'Why Not' also place a Buried Copper
Wire {Flexible} Ground Rod Set-Up in the
trenches and make use of the already pre-
expended labor ! ;-}
Note - The Deeper the Trenches the better
12"-18" is better than 6"-8".

Ground Conductivity :
There is a 'key' Advantage to this Buried
Copper Wire {Flexible} Ground Rod Set-Up
in that the Sprinkler System generally helps

to maintain a moist under-soil around the
Ground Rod {Wires} and the overall Ground
Conductivity is very effective 24&7 :o)

in an imperfect world . . .
this is just another grounding option
cause after all - iane ~ RHF

Source record: 57439

BpnJ,

Specifically for the Buried Copper Wire {Flexible} Ground Rod
without a Hard Rod Set-Up in the Sprinkler System Trenches :
With Trenches 12" to 18" Deep a light coating (a very thin 1/4"
layer that is 4"to 6" wide) of the Mixture of 1/2 "Bentonite"
(Clay Kitty litter); 1/3 Epson Salt; and 1/6 Copper Sulfate
would be adequate. { Enhance the Soil Conductivity -not-
Over-Kill the Lawn :o} Most of the time 'things-in-the-soil'
leach out and down and not up.

READ - Great Ground with Kitten Litter [Bentonite]
- by Guy Atkins on HCDX - August 10, 2000
http://www.hard-core-dx.com/nordicdx/antenna/ground/bentonite.html
Bentonite is great for getting an excellent conductive ground.

"GROUND ROD SOIL MIXTURE"
My General Recommendation for Ground Rod Soil is to take
the Original Soil from the Ground Rod Hole or Trench and
create a "50 / 50 Mixture" of original Soil (50%) and the
other (50%) made up of these parts of 1/2 "Bentonite" (clay
kitty litter); 1/3 Epson Salt; and 1/6 Copper Sulfate works
well 'in-the-ground' around ground rod. Then Repeatly Water
this down and 'tamp-it-down' lightly over the next few days.

NOTE - This 'assumes' that you first use a Post Hole Digger
to dig a 6"-8" Hole Two to Four Feet Deep and then pound
the Ground Rod into the Hole. Once the Ground Rod is fully
driven Seven to Eight Feet Deep. Then Fill the Upper Post
Hole Section with this Ground Rod Soil Mixture.

hope this clarifies a few things - iane ~ RHF

This is a great site, thanks. I believe the 35 kW is the one I heard a
few years back on 19m. I cannot tell which one(s) is available now for
SLBC.

Does VOA still have the Gloria, Portugal site, or was the removal of
that transmitter to Sri Lanka the end of that operation?

As far as I know both the VOA sites in Portugal (Gloria and Maxoqueira) were closed down in 1996 or 1997.

I hope you are right, but as you quoted the DJIA, so shall I...

It showed a *loss* (negative) for the year 2005. Funny for you to say
that a minus *year* for the DJ shows "The US markets are all on an
upswing". Pardon me for not following or agreeing with your reasoning.

>>Are you naive enough to believe that the Dow going up a few lousy points

Telamon wrote:

> There are always job losses.

Yes, that's true, but not necessarily in 30,000 and 40,000 job chunks at
a time. Since I posted my response, Ford is announcing *another* 40,000
jobs will be gone starting in March.

Telamon wrote:

> Some sector is always having a problem but

Well, the auto and airlines are pretty big sectors; we are talking
major companies that provide jobs to a large portion of the populace
across the whole country, not "Mom and Pop" candy stores. These are
not industries you want to see in trouble! As "Engine Charley" Wilson
said in the early 50s, "What's good for GM, is good for the country".
The obvious converse to that is "What's bad for GM, is bad for the country".

Telamon wrote:

> they are offset by other sectors in the economy.

You say "offset by other sectors in the economy". With the good paying
manufacturing jobs vaporizing at an alarming rate, what's left? The
"service industry"? Working for poverty wages at China-Mart? Making beds
at the Holiday Inn? Asking if "You want fries with that"?

>>If you want to quote *meaningful* financial news, try 'splaining away
>>the long vs short term bond interest inversion and the negative U.S.
>>savings rate (first time since 1929), neither one of which bodes very
>>well for the economy.

Telamon wrote:

> People are investing in stocks and bonds and not putting their cash in
> low interest rate savings accounts. People are also investing in the
> housing markets and other than mortgages the borrowing rate is low.

Well, if you missed it, Greenspan has *raised* the interest rates *four*
times, so "borrowing rates" may not be as low as you think.

Also, the housing bubble will burst. The only reason people are buying
these over-priced palaces is that they think they can sell it next month
or next year for more than they paid. For a while, they are right, but
like all bubbles, it *will* burst. The housing loan market is just as
crazy--the only qualification for someone getting a mortgage is that
they be able to fog a mirror.

Telamon wrote:

> Altogether individual wealth has increased.

Again, I will disagree. Part and parcel of negative U.S. savings rates
means, by definition, that people are now dipping into their equity to
make ends meet. Please explain how "individual wealth has increased" if
people have to use up their equity to keep their heads above water.

>>Puh-leze, do yourself a favor and take off those rose colored glasses...

Telamon wrote:

> Need anything else explained let me know but it would be better if it
> was about short wave.

Maybe so, but before that time comes, you're going to have to show me
that you know a lot more about that than you "know" about
macroeconomics... ;-)

Run to Amazon and get a book by Patrick Radden Keefe called "Chatter". It inadvertently exposes the left-wing agenda, influenced by the EU Socialists, against the US intelligence community.

Considering the latest left-wing flap it is a hoot to read. Very little facts and nothing but left-wing ascertains and total B.S. Exactly what you read about the US intelligence community in the press today. Notice they never make any bones about China, Russian or EU international eavesdropping efforts. Nah. So long as you are Pro-Socialist/Kommunist you are alright in "Dr." DaviDuh's Kamp.

WGN Radio 720 kHz - The Voice of Chicago

Program: Extension 720 with Milt Rosenberg
When: 9PM CST, Thursday, Jan 5th (0300 UTC Friday, Jan 6th)

- Tonight's Discussion -

PROSPECTS AND PROBLEMS FOR AMERICAN FOREIGN POLICY
As we begin 2006, America finds itself facing many challenges from abroad from our continuing involvement in Iraq to the growing influence of China in the global economy. Tonight, we will be discussing the future of American foreign policy in the next few years with a panel of experts, including CHARLES LIPSON, professor of political science at the University of Chicago, and RICHARD FRIEDMAN, president of the National Strategy Forum.

Personally, I have a big problem with domestic spying/surveillance,
regardless of the country or government doing it. It is against basic human
dignity. This includes China, Russia, Great Britain, ad inf. But when it
comes to it, we have to clean up our own back yard before having grounds to
complain about the mess in anyone else's.

Could the fact that it was a Radio Shack amplifier have anything to do
with it? Some years back they were accused of selling floor sweepings
and rejected parts as new components.

There is no way I can see earbuds causing the problems you describe.
Could it have been a faulty jack or a short in the wires going TO the
earbuds?

Look at loudspeakers. they blare at each other with much more energy
than those baby buds and no harm comes to the amp..and they even have a
coil which MAY be generating an alternating current from the sound waves
being received from the other side.

It is inaccurate to say that I hate everything. I am strongly in favor
of common sense, common honesty, and common decency. This makes me
forever ineligible for public office.

H. L. Mencken

The whole aim of practical politics is to keep the populace alarmed (and
hence clamorous to be led to safety) by menacing it with an endless
series of hobgoblins, all of them imaginary.

H. L. Mencken

"The notion that a radical is one who hates his country is naive and
usually idiotic. He is, more likely, one who likes his country more
than the rest of us, and is thus more disturbed than the rest of us when
he sees it debauched. He is not a bad citizen turning to crime; he is a
good citizen driven to despair."

H. L. Mencken
==========

Mencken's Creed

* I believe that religion, generally speaking, has been a curse
to mankind, that its modest and greatly overestimated services on the
ethical side have been more than overcome by the damage it has done to
clear and honest thinking.

* I believe that no discovery of fact, however trivial, can be
wholly useless to the race, and that no trumpeting of falsehood, however
virtuous in intent, can be anything but vicious.

* I believe that all government is evil, in that all government
must necessarily make war upon liberty.

* I believe that the evidence for immortality is no better than
the evidence of witches, and deserves no more respect.

* I believe in the complete freedom of thought and speech.

* I believe in the capacity of man to conquer his world, and to
find out what it is made of, and how it is run.

* I believe in the reality of progress.

* I believe that it is better to tell the truth than to lie. I
believe that it is better to be free than to be a slave. And I believe
that it is better to know than be ignorant.

Source record: 57461

Has anybody encountered a problem with a Grundig 650? Here is the problem.....if I have the AGC turned off, and the RF Gain control turned up to maximum, everything is ok.
When I enable the AGC, the interstation noise has a howling crackling quality.....also, the receiver's gain is about 10dB lower. It almost sounds like a bad AGC capacitor; if it is leaky, the gain of ther I.F. system will be lower. A clue to this possibility is the crackling sounding static. This is a characteristic of an envelope detector diode not completely "turned on" by the I.F. signal.
Does anybody have any ideas? I am going to open up the unit this evening......unfortunately, the closest thing I have is a model 600 schematic.

Pete

The stereo channels in stereo radios (or at least in some stereo radios) must have a feedbacl/load on them or otherwise one or the other channels can blow/malfunction/stop working.I once read an article about that in a magazine.I am not an expert on things like that,perhaps it depends on the quality or how a stereo radio is designed.But I do know of one instance of it happened to the first sound amplifier I bought at a Radio Shack store and I am pretty sure that is what caused the problem with the stereo AM/FM radio in his car.

Source record: 57463

I only had about an hour to play with it but in a word, I would say WOW! I used my DE-1103 to obtain the results. I tuned from 520-1710 counting all the stations I could understand. Here are my initial results:

Without the TG-33 I received 45 stations here in San Jose.
Using the TG-33 inductively coupled to the 1103 I received 96 different stations. That is more than DOUBLE! I haven't done any other kind of testing yet. I will do more tomorrow.

I have a Radio Shack passive loop that I thought worked pretty well but this is MUCH better. With the appx. 15 ft. cable you can get the antenna high up in the air. The only thing it lacks is a way to attach it to the radio. I used a small stick-on Velcro fastener to accomplish this. Maybe Degen will include this later. I don't know how much this unit will cost but I would suspect that it would be comparable to their shortwave loop antenna but I'm only guessing.

Shortwave Log is a great piece of software for this task. (Windows XP)

http://www.shortwavelog.com/default-english.html

It will import all the popular schedule formats (ILG, EIBI, FCC,
Primetime, HFCC and several others) into a searchable database. Also
includes logging capability, ionospheric prediction, receiver control
(local and remote), QSL reports and much more.

And now for the best part - the package is available free of charge.

I am not affiliated with the author - just a satisfied user.

Good DX - Roger

Stereo amps run fine without a load. I suppose there could be a poorly engineered stereo with gain in the output stage that would be unstable without a load, but that wouldn't cause it to blow up.

There are a few electronic items that can be blown if not loaded. Some RF amplifiers can't handle the no-load condition, but most modern gear is engineered to handle no load and shorts. Some poorly engineered Dc/Dc converters can't handle the no-load condition.

Don't leave out the idea of badly designed AGC. I have one old GE AM-only handheld radio I've been experimenting with on and off; it started out pretty nicely sensitive, but I found out through tinkering that the AGC was holding it back. In this 9V radio, I ended up putting something like six 1N914's in series with the AGC line before the AGC stopped attenuating weak signals.

I gotta get that thing back on the bench, especially now that I found the schematic I drew (sloppy but effective). I had a real hoot experimenting with various stuff on there.

>Downside is you will have to buy xtals for the SW bands you want to listen
to .... "drake" R-4/R-4B/R-4C)

Either that or buy a xtal cheater box... Those can also be used
on the collins. Also you could rig up digital readout with a
oak hills research box, etc..But the drake is quite usable as is.
I consider the drakes 2nd to the collins as far as quality/stability
of the older radios. They use the same basic type of circuit.
The drakes are better than most the other boatanchors I think.
Or at least if you want stability approaching modern standards.. :/
Also...Don't forget the R4a...It was after the R4...Each model
converted a circuit or two from tube to solid state... I've got a
R4 that is totally all tube, except for the rectifiers. It's one of
the first. #0058.
Also...You can get usually 2 bands per xtal, sometime three.
IE: xtal freq - 11.1 = the standard band. But you can also
get a 2nd band using xtal freq -11.1 + xtal freq.
Drake also sold a LW-MW converter, but hard to find. I think
I have the schematic for it somewhere.
BTW...The drake 2 line are decent radios too...IE: 2A, 2B, 2C.
I have a 2C and 2CQ speaker/q multiplier. It too needs xtals
every 500 kc, but uses a different xtal frequency scheme than
the 4 line.
Even the "budget" model 2C will hang with many of the high
end boatanchors as far as overall usability.
Many of the boatanchors, I do consider basically junk...I'm
kinda with Joe on that...But there are a couple of exceptions...
And they are old Collins and Drakes.. :) The hammarlunds are
ok to so-so. The hallicrafters range from ok to junk depending on
model..In my lowly opinion, the best old hallicrafters is less radio
than most any old drake. Maybe even the cheaper drake 2C...
But to be honest... I use my ic-706mk2g more for SWL
than any of the old radios... It's better in some ways, worse
in others. But a lot easier to tune, store mem's, etc...
I like digital readout and ultra stability. IE: tune a station on SSB
and leave for days at a time. The newer radios will do that,
and even the old collins/drakes will get close, but you will have to
tweak the older radios a bit every few hours to stay right on the
$$$...
I also like a readout on MW...
It's nice to have both new and old... :) Get a taste of both worlds..
MK

in light of that site, here's a little something that crossed my desk today:

As many are aware, the French government recently announced a rise in its terror alert level from "Run" to "Hide". The normal level is "General Arrogance", and the only two higher levels in France are "Surrender" and "Collaborate". The rise was precipitated by a fire during the recent riots that destroyed France's only white flag factory, effectively paralysing the country's military capability.

It's not only the French who are on a heightened level of alert: Italy has increased the alert level from "Shout loudly and Excitedly" to "Elaborate Military Posturing". Two more levels remain, "Ineffective Combat Operations" and "Change Sides".

The Germans also increased their alert state from "Disdain" to "Dress in Uniform and Sing Marching Songs". They have two higher levels: "Invade a Neighbour" and "Lose".

Seeing this reaction in continental Europe, the Americans have gone from "Isolationism" to "Find Another Oil-rich Nation for Regime Change". Their remaining higher alert states are "Attack Random Countries (ideally those without any credible military)" and "Beg the British for Help".

The British are also feeling the pinch in relation to the recent London bombings and have raised their security level from "Miffed" to "Peeved". Soon though, security levels may be raised yet again to "Irritated" or even "A Bit Cross". Londoners have not been "A Bit Cross" since the Blitz in 1940 when tea supplies all but ran out. Terrorists have been re-categorized from "Tiresome" to "Bloody Nuisance". The last time the British issued a "Bloody Nuisance" warning level was during the Great Fire of 1666.

The Aussies have raised their security level from "All Right Mate" to "'Ere We Go Again", and Matilda has reportedly been seen waltzing around the Sydney Opera House. The remaining Aussie higher alert states are

"Bloody Poms" and "Damn Kiwi Sheep Shaggers".

Canada, as usual, has simply moved up to the "Rose Coloured Glasses"
alert state, and the Federal Parliament has upped the number of illegal
refugees allowed in to the country.

Hello everyone,
I buy the above book, quite useful it is too. There are one or two things about it which I find hard to fathom. Why do they go on so much about synchronous detector features on receivers? I own a dozen or so receivers, some with and some without. The ones without the SD are not that much more useful than a receiver with it. For example, my ATS909/DX398 does not have it but my Sony SW7600GR does. For me, the ATS is still, marginally a better receiver for my needs. My Sony SW77 does not really seem to be much better when the SD is on and on my AOR 7030, well the receiver is that good with a good antenna that I never ever need it. With my Sat'800 it's also not that useful although on occassions it has helped.
My other bug bear is that they plugged and plugged the Sat'800 when it first came out and it was a pretty poor thing in my book. Much better now and I would not sell mine but in the beginning they seemed blind to it's quality control.
Oh and one more thing, why oh why do they harp on about receivers showing the time and frequency at the same time? Useful, yes I know but not that important. I own a watch and a clock and I am quite good at using them.
Moan over....

For some signals, the synchronous detector is very helpful at removing distortion from selective fading. If you don't experience selective fading, then you won't see the improvement.

Selective fading is a result of signal propogation and is different than fading that affects all parts of the signal at the same time.

The sync detector can also help with some types of interference, but if you are not experiencing them, you may not see the benefit.

For me, the sync detector is very helpful.

I would probably say it was Eton that plugged and plugged the Sat 800. They are the ones who pay for the advertising space. (Either directly, or via ad co-op with the resellers.)

You also have to admit there are very few new radios introduced, so when something new comes along, it gets a lot of attention. When the manufacturer hypes the product months before its release (as Eton does)there will be lots of press visibility.

You can also use a PLL synthesized VFO kit, shown on the following
website, to eliminate the need for crystals in the R4 series receivers.
It converts the R4 into a general coverage receiver which can tune the
entire shortwave spectrum without any crystals.

http://www.geocities.com/hagtronics/r4.html

A selectable sideband sync' detector can be very effective for reducing interference from stations on an adjacent frequency from the one you're trying to hear. This is a very common problem with shortwave listening and the sideband sync' detector is a good solution. Of course this only works for AM signals not SSB.

I trust Murtha (who is ''channeling'' military people who cannot speak
freely themsalves). Jimmy Carter's a good guy. I have no use for any
of the rest of them.

I think the War of Northern Aggression was probably more of a crisis,
but not by much.

I don't care for the 800 myself. I tried not one but two of them over
the years, and ended selling both of them. I don't like selling radios,
either. If I buy a radio, it's because I plan to own it and use it for
a long, long time!

Per a notification via a Yahoo group I belong to for DE/KA1102 users, Tao Qu ("Radio and Component" store on eBay) will be putting them up there for sale shortly. I am told, but am not sure, they're the same as the DE31 antenna which is also sold on eBay.

Telamon wrote:

> Cindy's point is to denigrate her son and our other dead and maimed
> serviceman's sacrifice for political gain.

What a sinister view you take.

You see "denigrating her son" and "political gain" [I didn't realize
she was running for office...or that Abramoff was trying to force money
on her]

I see a grieving mother who is mourning her son, feels that he died
for a bogus war (a not so unique view held by 3/4s of the world) and a
lady brave enough to speak out to try and save other mother's children
and to try and right what she perceives as a wrong.

It's *that* simple. Why do you have so much difficulty in accepting that
at face value rather than putting an insulting, mean-spirited spin on
it? Is it just that you are angry that she *dare* speak out against
beloved leader?

You take the sinister, mean-spirited view, I'll take it at face value
and we can agree to disagree...

Telamon - I would say it (write it)

Cindy Sheehan's 'point' {Her Mission in Life} is to be an
Anti-War Activist. The Fact that 'she' uses the Death
of 'her' Dead Son "Casey" as the Background Theme
for 'her' Anti-War / Anti-American / Anti-Bush Political
Activities Denigrates All That He Was :
* Casey Sheehan Chose a Military Career and Re-Upped
knowing His Unit would be going to Iraq.
* Casey Died Servicing His Country in the War-on-Terror.
* Casey's Life was About Duty, Honor and Country and
His Death Honors and Humbles Us-All as Americans.
His Mother 'Cindy Sheehan' DENIGATES the Life and
Sacrifice of Her Son "Casey Sheehan" with her everyday
Anti-War Campaigning using His-Name-in-Vain.

IT'S ABOUT ARMY SPECIALIST CASEY SHEEHAN :
[Not About Anti-War Activist Cindy Sheehan]
Let "US" not dwell on Cindy Sheehan - But on the Life
and Sacrifice of "Casey Sheehan" a Brave American
Soldier who Died for What He Believed In; His Country;
His Fellow Americans; and All the Wonderful People
{both Family and Friends} that He Knew and Loved.

Pray for the Soul of "Casey Sheehan" and all others
who Served and Died in this War Against Terrorism
And We All Say - amen, Amen. and AMEN !

Independent Instructors Wanted - We will invest in you so you can teach for us.

Microsoft, Cisco, CompTIA Instructors

Esthetician, Facial, Cosmetology, Hair, Nail, Skin Care, Massage Teachers

Nursing assistant, dental assistant, home health aid, paralegal program instructors

Vienna Academy will contract with you to provide training in your city at one of our locations in your city. No investment require, part time evening classes only. Keep your current job and teach in the evenings.

http://www.viennaacademy.com

We have a dedicated student support staff available seven days per week. Highly knowledgeable instructors, enrollment advisors and student services representatives to guide you through your studies and help you successfully complete your training program, leading to certification and or licensure. Our Life Long Placement Assistance ensures that you are able to identify the many career choices available.

Vienna Academy of Arts and Sciences with campuses located in Montreal, Washington DC, Toronto, Ottawa, Miami, Vancouver and Los Angeles offers instructor led classes, distance learning and online skills training.

Our focus is skills training classes leading to certification and or state licensure for designations such as:

Information Technology Institute
Microsoft
MCSE 2003 + security - MCP - MCSD - MCAD - MCSA - MCDBA - MCDST
Windows Office XP Application
Office User Specialist
.NET
Visual Basic
Cisco
CCNA - CCNP - CCSP
CompTIA
A + Network + Security + Server + Linux +

Esthetic Institute
Esthetician (Facialist)
Microdermabrasion
Electrolysis

Massage Therapist
Aromatherapy
Reflexology
Nail Technology (Manicurist)
Permanent Make-up
Cosmetologist (Hair Stylist - Beautician)
Professional Sciences Institute
Dental Assistant
Dental Hygienist
Early Childcare Assistant (ECA)
Home Health Aid (Personal Support Worker - PSW)
Nursing Assistant
Paralegal (Legal Aid)
Pharmacy Technician
Phlebotomy
Vienna Academy of Arts and Sciences is an official VUE Certification Testing Center.

The Esthetician Training Program prepares candidates for the CIDESCO and ITEC exams.

Our education programs include distance learning, online training, degree and diploma programs. Our courses give you the job skills via traditional courses and e-learning combined with self study and computer based training. Our correspondence courses include a GED program for those students needing to finish their high school diploma.

Most likely a bad AGC capacitor. I had the same problem with my
Philips D2999.
I actually replaced the capacitor with a larger one (found by trial and
error) and that gave me a nicer AGC response (less pumping).

That is what I thought at first, but now, it seems that the AGC knee point is set at too low of a level. Many receivers have a way to set the point where the AGC kicks in. Every other Grundig I have seen so far has an I.F. gain conrol of sorts. I think I need to figure out where this one is.

Pete

well boys and girls, here we have another idiotic off-topic thread. so
that you don't all leave this thread dumber for having wasted your time
with it, here's a bit of music history that perhaps some of you didn't
know:

England's Henry VIII was an accomplished music composer.

http://www.amazon.com/gp/product/B00000AFTK/qid=1136589400/sr=1-1/ref=sr_1_1/103-8692647-2
696615?s=classical&v=glance&n=5174

While often attributed to Henry VIII, the lyrics to the tune
"Greensleeves" (the tune on which the Christmas carol "What Child Is
This" is based) were most likely not written by the English monarch.

For those of you who enjoyed tuning in to the CBC's radio documentary
on the life and times of the English composer Thomas Tallis, please
enjoy the wealth of Tallis selections available from amazon.com:

http://www.amazon.com/exec/obidos/classical-artist-search/Thomas%20Tallis/103-8692647-2696
615

You are invited to learn more about Tudor England at PBS.org:

http://www.pbs.org/wnet/sixwives/resources.html

FWIW I have had a DA5 for ~20 yeas and it has been very usefull.
I modified for LF operation but with all the noise in my house if
wasn't
that usefull.

My SIL found a DA7 at a junk mart in kalifornica and sent it too me.
Works the same as the DA5 except for the included LF. It isn't
a Wellbrok, but they both do a very good job.

During an extended power outage I was able to do some serious LF work
and away from noisy equipment both the modified DA5 and DA7 do a
very good job. Doubled the number of NDB and got about 7 tinmes as many

DGPS stations.

Terry

784. WGN Radio 720 kHz - The Rise And Fall Of Empires / Landscape Of The Cosmos

Newsgroup: rec.radio.shortwave
Date: 2006-01-07 01:29:43 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11ru6cnosin0vfd@corp.supernews.com>
Source record: 57271

WGN Radio 720 kHz - The Voice of Chicago

Program: Extension 720 with Milt Rosenberg
When: 9PM CST, Friday, Jan. 6th (0300 UTC Saturday, 7th Jan.)

- Tonight's Discussion -

THE RISE AND FALL OF EMPIRES
Benjamin Franklin once said, "a great empire, like a great cake, is most easily diminished at the edges." Indeed, once an empire is formed, its maintenance becomes a political, social and cultural struggle and it often seems that all empires are doomed to failure. Tonight, we will be examining some of the great empires throughout history, discussing the roots of empires and the sources of their falls, and defining imperialism in historical and modern terms. Our guests will be BRIAN LAVELLE, professor of classics at Loyola University, CORNELL FLEISCHER, professor of history at the University of Chicago and an expert on the Ottoman empire, and MICHAEL KHODARKOVSKY, professor of history at Loyola University Chicago and an expert on imperial Russia.

Live Streaming http://wgnradio.com/listen/liveWGN.ram

WGN Radio 720 kHz - The Voice of Chicago

Program: Extension 720 with Milt Rosenberg
When: 9PM CST, Monday, Jan 9th (0300 UTC Tuesday, 10th Jan.)

- Monday Night's Discussion -

THE LANDSCAPE OF THE COSMOS
Charles Darwin once that the universe "has precisely the properties we should expect if there is, at bottom, no design, no purpose, no evil, no good, nothing but blind, pitiless indifference." Tonight, Extension 720 turns its eyes skyward once more as we contemplate the origins and nature of the universe and how the makeup of the cosmos affects the structure of the earth. Our guest is LEONARD SUSSKIND, professor of theoretical physics at Stanford University and author of the new book The Cosmic Landscape: String Theory and the Illusion of Intelligent Design.

Since the majority of the population in Amman buys shortwave radio's just ask any local....I dont recall names and streets but it seemed there was electronics for sale in Amman every 50 to 200 yards in the merchant districts when I was there 2 years ago.

Thats one thing you gotta give the typical middle easterner! They know a great hobby when they hear it! (Listening to shortwave!)

Too bad it dont catch on in the US like it does elsewhere in the world??

I very much enjoy WABC's John Bachelor 770kHz at the same time as WGN's Milt
just a few kc's down.
I sometimes flip over from one program to the other as they both can keep me
riveted at times.

Glad you enjoy Milt's program. I have enjoyed his shows for many, many
years. He has the best variety of subjects. Eclectic he is! But Milt is
getting along in years as we all are, sadly.

Happy New Year to you!

Stumbled across great sounding middle eastern music, then at the top of the hour sound Asian? Now it sounds like French? All my sofware has nothing that I can match to this?

Anyone listening to this? Know what it might be? Wish I had started earlier as the music was great!

Jim

793. (OT) : Carl Claims - If You Vote For Any Republican... You Are A Traitor To Democracy And The Constitution.

Newsgroup: rec.radio.shortwave
Date: 2006-01-07 02:25:35 UTC
From: RHF <rhf-newsgroups@pacbell.net>

Source record: 57280

Carl Claims - " If you vote for ANY Republican...
you are a traitor to democracy and the constitution. "

Carl - Such contempt for the Wonderful American People and Our
Constitutional Form of Elected Representative Government.

Carl - With 1 or 2 or may be 3 Posts to 'your' New Name . . .
[Does Anyone know Carl by any other Name ?]

Gee - Another Democrat Party of the USA Sock-Puppet Posting
an Off-Topic Political Message to a Shortwave Radio NewGroup.

Wow - I Am All Excited - Howard Dean's "Scream It To The People"
Daily Talking Points from the DNC {Democrat National Communtern}

Howdy - At Least Put and (OT) : at the start of the Subject Line.

Carl - The 2004 Elections Facts Speak for Themselves :
President George "W" Bush the Republican presidential candidate
received 62,040,610 Votes and that was 50.73% of the Total Vote
by American Citizens. President Geroge "W" Bush {Republican}
Won with 286 Electoral Votes and John 'ff' Kerry the Democrat
presidential candidate lost with 251 Electoral Votes and received
59,028,111 Votes and that was 48.27% of the Total Vote.
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_2004
Carl - That would make more the 50% of the America Voters = Traitors.

US House of Representatives Election in 2004
http://en.wikipedia.org/wiki/U.S._House_election%2C_2004
Republicans with 232 Seats with 53.3%
Democrats 202 Seats with 46.4%
Carl - That would make more the 53% of the America Voters = Traitors.

US Senate Election in 2004
http://en.wikipedia.org/wiki/U.S._House_election%2C_2004
Republicans with 55 Seats with 55%
Democrats 44 Seats with 44%
Carl - That would make about 55% of the America Voters = Traitors.

Carl - Did 'you' ever think that They (Like You) may be just average
Americans - Who Love Their Country and Vote Their Hearts ?
[Their Hopes, Dreams and Prayers for a Better America - Amen.]

Carl - Did 'you' ever consider that Good People could :
Disagree About Important Issues and Still Be Friends ?

Carl - Quit trying to make the USA into a One Party Political
System run by the Liberal (Left-Wing-Radial} Leadership of
the Democrat Party of the USA.

Carl - All American Citizens have Equal Rights : be they Democrat,
Republican or other; and whether they are Liberals or Conservatives
{Right or Left Wingers} or simply Middle-of-the-Road Moderates.
.
.
THREE POINTS ABOUT - This (OT) "Off-Topic" Reply by RHF :
Objective - Change 'their' Propaganda Message to a more Fair,
Balance and Positive Public Information Message presenting
more information and the-other-half-of-the-facts that 'they' omitted.

About an hour ago,I read an article at msnbc,(PMSnbc) U.S.Opening Private Mail.
An 81 year old guy (retired from a University of Kansas (he was a History teacher) in U.S.A.got a snail mail from a woman in Phillipines.His snail mail had been opened and "inspected" and resealed with a strip of dark green tape bearing the words, Border Protection and it had the official homeland security thingy on the tape (read that,homeland INsecurity) He said there wasen't anything suspicious in his snail mail correspondence with his friend in Phillipines (notice I spelled Phillipines the way it is suppose to be spelled,with two lls) I wonder if that meanes those Stupid Morons "inspected" the Christmas card I sent to that married Irish woman wayyyyyy over yonder accross the big pond? If so,those Morons wont ever find anything suspicious in hers and my snail mails to each other! Hey,metinks I might find me a penpal galfriend in Phillipines and snail back and forth with her (y'all just know how penpals just loveeee to snail mail) and see what happens.

As i understand it when a AM signal fades you can sometimes still hear the modulation content but without the AM carrier to support it so it sounds garbled like listening to a SSB signal on AM, so the SD circuit is adding the carrier back to the signal sync'd to the original carrier so it does'nt beat against the existing AM carrier and cause a heterodyne and then the audio does'nt distort when it looses it supporting carrier because of the receiver has generated it own carrier.
Correct me if i'm wrong.....

Small amplified loop antennas are the way to go for medium wave and at
least the lower SW bands where local noise competes more with signals.

For the same reason they should be better for LW.

Syria has many WMD sites indicated on the web site and Syria supports,
exports terrorism.

The connection is that large convoys of trucks left Iraq for Syria just
prior to the US invasion. The suspicion is that they were filled with
weaponry and in particular WMD.

I don't mean to be funny but I don't understand why you are not able to
appreciate sync detection since you have radios with and without it. It
must have something to do with the part of the world in which you live
in or the signals you choose to listen too. Speaking for myself daytime
MW it usually has no benefit for example but dusk to dawn it makes a
huge difference where without it many stations would be unintelligible
for up to several minutes at a time. The example here are 50kW stations
50 to 200 miles from my location such as KFI and KOGO. These stations
have very strong ground wave daytime signals that at night are phased
with very strong sky-wave signals from the same stations. This vector
combination can be stable for minutes at a time, which if out of phase
means you can't understand a thing being said for minutes at a time
without the sync detector on.

For short wave sync detection helps about 50% of the time day or night.
Whether it helps or not depends on the signal path, ionospheric
conditions or both. Here the non sync distortion time is usually shorter
from 1/10 second to a few seconds most of the time.

I have sync detection on most of the time and only turn it off when I'm
band scanning.

Another benefit is on the RX340 and R8B I can select the side band for
sync detection. This is a very effective block for adjacent channel

interference. More effective than the passband tuning. The 7030+ can't do that trick for you but the Sat 800 can.

< Snip >

That's because an load open just like a short load causes the RF
amplifier output to dissipate two times the output power. Opens and
shorts both cause 100% power reflections. On older generation equipment
operating into an open or short usually meant the output would be blown.
Equipment built these days have more power handling margin on the small
signal stuff. Usually the higher you go in frequency capability the less
likely an amplifier will withstand a 100% reflection. Big amplifiers
will still get destroyed at any frequency. High power TWT's can be
ruined in a few seconds. The prior comments refer to utility amplifiers.
Commercial ham gear these days have power fold-back protection that
usually but not always saves the finals.

Basically the energy is being reflected back to the RF amp instead of
going to the load.

When DxAss was a long haired hippie back in the 60's, he used to break
the antenna off police cruisers. When the cop hit the PTT, the radio
would fry.

It's quite sad. I never knew an asthma attack could be fatal.

I always thought Ramona sounded great on KNYE. Somewhere down the line,
Art has to figure out if he wants to keep her voice alive on the radio.
She is the "automated" voice doing station ID, time and temperature.

When I bought a new Sony 2010 I was amazed that with the SD on I could hear
a MW station clearly that I never had before. A local would wipe it out
without the SD on.

I don't know a lot about asthma, but I guess this illustrates how dangerous it can be. If I'm not mistaken, Ramona had been "managing" her asthma for years, only to succumb to what appears to have been an unmanageable asthma attack. That's pretty scary when you reflect on the number of people who have asthma.

In any case, I feel bad for Art. I hope he has some good friends nearby who can help him through this period.

Please, please take a bigger view...you keep looking at a day here and a day there. Please read more carefully what I said (and what you were so gracious to quote above). What I said was, that for the *year* of 2005, the DJIA showed an *overall loss*, an easily verifiable, published fact that you can look up in that left-wing, commie pinko Wall Street Journal.

As I also said, "I hope you are right" [that the economy is in good shape]. However, if you believe that is so, please justify why, if the economy is in such "good" shape, *major* iconic companies that provide jobs to large portions of our citizenry are near bankruptcy, are sinking further into junk bond status, three(!) national airlines are in bankruptcy, the American Tool and Die industry is gone, the telcom industry is in a shambles and in just the last month or two, almost 100,000 good paying jobs in the auto industry alone went into the dumper.

Feel free to continue defining *that* as a "good" economy and feel free to keep whistling in the dark...

From: Charly <No.Emails@No.Spams>
Message-ID: <43c00288$0$21681$626a54ce@news.free.fr>
Source record: 57327

Since I didn't find what I wanted, I made it...

In fact the PT80 (aka Grundig Yacht Boy 80) is an expensive small little radio... I don't speak about performances, I did not try it. I'm just speaking of features as listed on the manufacturer's web sites and so on.

Compared to the ATS 505 and 606, the PT 80 is in between the two former in size, it has the SSB and tuning knob of the 505 but lacks the PLL.

I would say, if you need SSB takes the cheaper, 505 else take the smaller 606.

But the Kaito/Degen beat them all by far with a lots of features for a much lower price...

http://calebrun.free.fr/radio/kaito-sangean.html

Hope this helps,

Charly

Hi BuzzyGirl

I listen to Hams on frequencies between
3800 to 4000 approx. I see the Degen 31 loop antenna only works between 3.9
and 22. Is that definitely correct? I mean the loop would do nothing for me
for frequencies under 3.9??????

Thanks
Lucky

Hi there Jim

That sounds almost incredible. You picked an additional 45 brand new
stations with this new loop?? I mean that's extremely incredible. It's
like having a brand new radio! I want one then for sure.

Amazed

836. AM only radios.....does anybody still make them?

Newsgroup: rec.radio.shortwave
Date: 2006-01-07 18:34:21 UTC
From: Pete KE9OA <p.gianako@comcast.net>
Message-ID: <dNednd86P7E2lF3enZ2dnUVZ_sydnZ2d@comcast.com>
Source record: 57330

I've got a Sony 6500W radio. Even with the cheapest multi-band radios there were separate oscillator and antenna trimmers for each band. Not so with this radio! Sony chose to use the same pair of rear mounted trimmers for the AM and all of the shortwave bands.
What I need to find is a currently available AM only portable radio so I can remove the tuning capacitor and mount it inside of the 6500W. The purpose of this whole thing is so I can have a separate tuning capacitor for the AM loopstick.
The fact that this radio uses the same trimmer pair for the SW ranges is ok, because since the antenna circuit for these ranges is relatively low Q tracking error is not a problem. The problem shows up when you are tuning a loopstick that has a Q of 400+.
Now, if I can find a nice low-profile cap I will be all set. One other thing about this radio.....it is dual conversion on the shortwave ranges but single conversion on the MW band. It isn't a bad MW performer, though.

Pete

I've got one of those 2999s. It is a very decent LW/MW receiver. The Grundig 650 has very similar performance on these bands. As I was playing with the 650, I noticed the effects of reciprocal mixing on the 19M band. Plenty of sideband noise out of this synthesizer.

Lucky,

I'm not sure myself, I haven't used this antenna. However, I found a couple other sites that discuss this antenna, and it seems that the range is 3.9-22 MHz. FWIW, most of the reviews I've read on this antenna have been positive, and its owners attest to its being a real bargain.

I don't know why you are forming the outlook that you have as there are
always problems to point at. The economy is never going to be firing on

all cylinders at the same time. Some sectors will be flat or going down while other sectors will be going up. If you want to discuss the over all economy then you have to look at least the whole year and the economy as a whole. The economy is on an upswing for the year. Most of the tax is collected on net profits and federal tax income is up. End of story on the past year. Looking ahead are some industries in trouble? Yes. Are some sectors on their way down? Yes. Over all is the outlook for the economy good? You bet. 2006 should be a good year over all.

Telamon's take on the big view.

I'm done being drawn into yet another off topic thread. Feel free to have the last word.

I know people that are allergic to peanuts that will have an asthma
attack and die if they eat them. Peanut oil is used in a lot of
processed products so they can't eat them.

I don't know what Ramona was allergic to but it does not matter once
the asthma attack begins. It could be something in the air or in food.
You rush them to a hospital and hope for the best that you are not to
late.

I see you also referred to DC to DC converters. Those devices along with
many industrial power supplies have minimum load requirements for the
control feedback circuits to operate within specifications. Without the
minimum loads the gain/phase of the control circuitry can go into a
positive feedback mode when they are supposed to be in a negative
feedback mode so yeah they can even blow up for that reason, which is a
completely different reason from the RF amplifiers explanation.

Their winter schedule has been doing as well as their summer schedule.
Today I have been listening to them on:
11,655 very good
15,325 very good
15,525 very good
17,725 very good
17,810 good but weaker then the other freq's
where 17,810 has been the weakest since it is directed to Africa.

These are on the weekend only. I know that 17,810 is on during the weak
but most of the others are not at 19:00 UTC.

Is there something new here I'm missing in the press release? I don't
see anything new about the radio.

Well, close (but no Klintoon cigar).

It actually means "Underwriter's Laboratories" and it (used to) mean
that the device was approved from an electrical safety viewpoint.

Unfortunately, some manufacturers have gotten pretty slick at dodging
around things. For example, they will put the UL sticker on the power
cord (which *is* indeed UL approved), but the device is not--they hope
the customer will *presume* the entire device is UL rated.

Our Chinese friends can get even worse. I was talking to an acquaintance
that was investigating getting some devices manufactured in China, he
asked the Chinese rep about UL approval and the rep said, "Sure, for
another 10 cents per unit, we will put on the UL label". Either way, the
rep was incredibly naive or incredibly crooked.

Let the Buyer Beware!

I'd look at a car parts junkyard, where you might find an AM-only car
radio for peanuts; or, if you know what you want, just get in touch
with a place like Mouser.com (no minimum $$ on orders), and order the
exact trimmer cap you want.

Could some kind soul please explain the whole AGC thing to me ?
And keep it simple please.
What does it do?
When should I use AGC Fast?
When should I use AGC Normal?
If I turn off AGC, and manually adjust the RF Gain, what am I doing, and why am I doing it?
Anything else I should know?
FYI, I have an Icom R75 with all the Kiwa mods, and an Antenna Supermarket Eavesdropper dipole.
Thanks,
Lenny

Use FAST when bandscanning, SLOW after you stop on a station.

OFF when backing off on the RF gain (good for quiet SSB; works better
than Squelch). You may need to use more AF Gain.

13:00 to 19:00 UTC time frame. They are not all on all these
frequencies at the same time. I just flip between them to find the best
one on at the time 5 AM to 11:00 AM my time. Generally going from lower
to higher frequency as the morning progresses as you would expect.

Basically the radio has to adapt to the signal level you are tuned to by changing its sensitivity. A weak signal will cause the AGC voltage, which stands for Automatic Gain Control (this is a feedback loop in the radio) to change to a level for maximum sensitivity. If the radio is tuned to a strong signal the AGC voltage will change to cause the radio to be less sensitive. This same AGC voltage also drives the "S" meter on most radios so when the "S" meter swings up to indicate a strong signal the radio is also being driven to be less sensitive.

Generally I set the AGC to the fastest settings that does not cause an annoying pumping of the signal for AM. If the AM broadcast has a rapidly changing amplitude I would then switch the AGC to a slower rate of change.

For SSB usually you want a slow AGC so you don't get the noise between the audio peaks for SSB broadcast. Generally you will want slow AGC for ham SSB for the same reason.

For any kind of digital mode you want fast AGC and if it is an option on your radio you would also want to use fast response IF filters.

Band scanning for any type of signals I use the fastest AGC.

The ICOM R75 AGC is a more complicated thing than on most radios and some of the "Mods" may well have changed the way the radio AGC behaves so I'll have to leave the commentary to someone else that owns one.

The D1875 offers fair performance for an analog receiver. It is
completely eclipsed by the performance and sheer number of features on
a Degen DE1103, which can be had now for about the same price a 1875
sold for 15 years ago. The RFP-11 is essentially the same as the 1875.

So..what happens to the old inhabitants? Will they be welcomed back or will they not be able to afford the new city anymore? If they are not welcomed back, then the spectre of a 'social/economic cleansing' rears it's ugly head.

There are already enough 'The levee was blown' theory adherents without adding fuel to the fire.

> Correct me if i'm wrong.....

You're essentially correct. When the signal fades it changes the phase
relationship between the carrier and the audio sidebands, which produces
distortion. A sync' detector replaces the defective received carrier
with a locally generated 'clean' one.

I think Pete is looking for the 'main' tuning capacitor from an AM
radio. Analog car radios generally use inductive tuning (variable
permability coil) so they don't have a tuning capacitor.

883. WTOP 1500AM Leaving BCB Tonight

I thought what happens with selective fading is the carrier amplitude
is reduced to the point the demodulating AM envelope detector can't
detect the side bands properly and the result is high level of
distortion.

When the carrier is greatly weakened to that point there may still be
enough signal for the sync detection circuit to stay locked to the
carrier and that receiver generated carrier is mixed with the original
signal so the demodulating detector can then detect the side bands
correctly.

I'm sure the phase distortion also occurs but the sync detector can't
help with that.

Very disingenuous and predicated upon a lack of scientific knowledge. Here's a question for you: If it isn't the CO2 that keeps some energy from being kept in then what does keep all the energy from being re-radiated?

> Woweeeeee. It lowered global temperatures by 1.2 degrees C.

1.2 degrees C is a considerable change in global temperature and was the average global temperature decrease. You can bet that the decrease was more than that in the areas closer to the blast site. That decrease is primarily due to a decrease in energy reaching the planet's water sources.

> Contrast that
> to what the nuclear winter "scientists" claimed; that one ten-megaton
> nuke could cause nuclear winter, blackening the earth's atmosphere for
> decades.

If you can, dig up a reference to the 10-megaton nuke causing nuclear winter. Anything that I have read on this topic indicates that it a whole lot of nukes going off i.e as in a large-scale nuclear exchange that will toss sufficient amounts of dust into the atmosphere to cause a good portion of the incoming solar radiation to be reflected back out. Hence, the temperature decrease. Krakatoa proved that it is possible to have enough debris sent into the atmosphere to cause a temperature decrease.

> Yet Mt. St. Helens is estimated to have had as much energy and

The more energy that gets trapped in can mean alterations in global air and water flow. Those currents have major impacts upon planetary climate. El Nino and El Nina are good examples of that.

>
> Talk about "good for a laugh". Krakatoa virtually obliterated the sun, and

> to kill everything on the earth? (And without getting the water too hot!)

To you, a 1.2 degree C decrease is nothing. To the planet, it is a different matter. And it is more than "heating" water. It is the effect upon all planetary systems. You seem to have a hard time with this concept.

>
>
> Just how stupid do you think I am?

Best efforts of all mankind? Freons and halons do a very good job at destroying ozone and they are "recent" inventions. The combustion engine is also a relatively recent invention. Too bad that the greatest CO2 level increases coincide with the large scale introduction of the combustion engine. The problem with CO2 in the atmosphere is that there isn't much of it in the first place so any increase can have a large effect.

Any idea of how many of those explosions were actually below the surface
of the earth and what were the actual yields of the nukes tested?

It makes a world of difference if the tests are above or below ground.

Lenny,

I'm in the eastern time zone of the US also, and I get Australia great on 9580, and RNZI fairly well on 9885.

Both are on at the time of this post, though neither is coming in as well as I've heard in the past.

897. Re: Magnavox D1875 II Band World Receiver and Toshiba Model No.RP-F11

My brother and sister-in-law have one of those Toshibas. It was given to them as a gift, oh, must have been twenty or twenty-five years ago. I bought it at the old Electronics Equipment Bank in Vienna VA.

Passport thought highly of them. They were considered good value for the money. I'm sure I can dig up the review. The Toshiba was sold under a variety of names, including Kenwood/Trio. Not a bad radio at all. I had to fix the PCB where a battery had leaked and corroded it. Wouldn't mind one for myself.

898. Help-New Sangean can't pick up and SW/LW ???

Newsgroup: rec.radio.shortwave
Date: 2006-01-08 12:59:23 UTC
From: Icefish <epetersen@metrocast.net>
Message-ID: <1136676348.390825.182760@o13g2000cwo.googlegroups.com>
Source record: 57534

Hi,

I'm hoping someone can point me in the right direction. I got a Sangean ATS 505 for Christmas and have been playing with it for last 2 nights and can not raise anything on SW or LW. I do get great AM & FM reception. I have plugged in the Ext. Ant 60 and streched it out across my living room on beams in the ceiling. I read tons of 'stuff' on web pages - tried dialing in on a couple dozen frequencies listed - even ones aimed at Americas - still nothing.

I've moved from bedroom to living room and still nothing.

I do have 3 wireless home phone lines (2.4; 5.8 freq) and Linksys Wrt54G with repeater in the house - would that affect my reception?

Other than that I live in NH - a fairly remote area 2 1/2 miles north of Boston...

Any guidance would be greatly appreciated - point me to newbie web sites or whatever...I'm lost.

Thanks in advance!
Icefish

Mississippi vs. New Orleans

Mississippi: We have a plan
New Orleans: We gots us a plan, too

Mississippi: We have trucks waiting on higher ground to move food, ect.
New Orleans: We gots our trucks parked, too. Just in 6 feets of water.

Mississippi. Police will be back on patrol as soon as we can move
around.
New Orleans: Cops loot Wal-Mart.

Mississippi: Home owners begin clearing debris by themselves.
New Orleans: Who's gonna clean up this mess?

Mississippi: It'll cost me some savings to rebuild, but . . .
New Orleans: Where's the damn government with the debit cards?

Mississippi: We are partners with FEMA, but it starts here first.
New Orleans: Damn FEMA, why wasn't they ready?

Mississippi: It was worse than I believed. I should have evacuated.
New Orleans: They didn't send nobody to gets me.

Mississippi: : Leaders: We have work to do, let's get started.
New Orleans: Leaders: Let's go to Las Vegas and party.

Mississippi: We made a few mistakes, but we learned.
New Orleans: It was ______ (fill in the blank) who was at fault.

And you wonder why Mississippi isn't getting the news coverage New
Orleans got? The media doesn't
want to see a state with it's act together or watch people work to
rebuild. Whining,
complaining and infighting. That's news, Baby!

> Basically the radio has to adapt to the signal level you are tuned to by
> changing its sensitivity.

... in order to avoid overload distortion at any stage in the receiver by excessive signal and to even out the loudness between weak and strong signals so that the listener does not have to adjust the volume control.

> For any kind of digital mode you want fast AGC ....

Telamon, I've read that elsewhere and it seems to be embedded in specs but I don't understand why after having experimented with modifying a DX-394A. My impression from the literature I have read is that the 'ideal' receiver is supposed to have fast attack (under 10 milliseconds) and variable release (slow > 1 second, medium ~ 100's of milliseconds, fast ~ 10's of milliseconds).

1. A problem is if the attack is under 10 ms and the release is slow, then a very short noise burst reduces the receiver gain for a long time. Seems to me that the attack should be proportional to the release to avoid that problem but that might not be ideal for SSB or Morse. I can see that, for most data, a fast attack/release combo would likely minimise dropouts. Maybe the ideal has independently variable attack and release to accommodate all conditions.

2. Many DRM experimenters have found that the maximum DRM SNR is achieved by turning AGC off but that may result in a higher long term error rate due to signal fades and surges after the gain has been set. The reasons why the Max SNR is reduced by AGC are not fully understood - one, specific to the DX-394A and original DX-394 but possibly a factor in other radios, is that a local oscillator was pulled as the mixer gain varied, whether by manual RF Gain control or by AGC. This results in a phase noise and, in extreme swings in gain, in the loss of lock. There are other more subtle factors degrading the Max DRM SNR that remain that I don't know about. (Note that the DRM SNR has nothing to do with the perceived audio SNR but is a simple representation of the quality of the transmission channel calculated from the scattering of the transmission coding constellation.)

Tom

Hello again,
I can only assume it the place I live, London. I will accept that
sometimes the SD circuit does help a little but overall if i take PWBR
at face value in their view of it I think, for my situation they are
wrong. Perhaps where signal strenghts are weaker you are able to make
good use of it.
Regards,
Alan

I can't believe what some RRAP hams are into!

The ultra-perverted FURRY FETISH !

Iffen you ain't heard about the furry fetish and wanna see the
incredible PHOTOS, then by all means lookie
over here: http://orifice.net/search/furry (..not for kids, OK for lids)

and here too for all the details: http://crushyiffdestroy.com/b2/index.php

here too: http://www.crushyiffdestroy.com/showr/vanityfair

Ugggh!! Fat middle-aged balding white men who
are into having their friends dress up in anatomically
correct full-body costumes with *holes cut* in just
the right places (!!) for what they call....."yiffing"!

How shocking! Only cloistered fatassed ham radio
operator perverts could have come up with this.....
Forget the LAMBDA a.r.c. stuff, this is FAR WORSE folks.

BARFFFFFFFF!!!!!!!!!!!!!!!!!!

ps: We are also VERY HAPPY to announce that 14.275
in the daytime on the weekends is back to it's old revolting
self again! Yes folks, all of the old clowns are back on 14.275
on the weekends mixing-it-up LIVE and ON THE AIR again
just like they used to do in the good ole days with music, foul
language, tape playing and more. Hail Hail the gang's all here!
Toon in any weekend for some good ole-tyme "pre-Hollingsworth"
radio fun! (It's almost as good as the old Mike and Judy Show!!!!)

Pfhbltttt!!!

on

http://users.fulladsl.be/spb13810/oc/

I put some pictures of self made loops

with pvc pipe or hulahoop !

more turns makes them have a lower freq

eg the 1 meter hula is about 5.5-12 Mhz,
I already made an AM ant with the hula ..

calculations in Meters:

Oops... sorry.

And sorry you hurt your leg.

The Sangean ANT-60 is a good little reel up wire antenna. Can be clipped to the telescoping whip of
a portable
SW, or use a 1/8 inch antenna jack if the portable radio is so equipped. Amazon.com has a good price
on the ANT-60

Take care and get well soon.

Rob Shlogman wrote:
> I have a radio. I meant a portable antenna.

Hello Rob,

I whish your leg will be healed asap...

About the antenna, you have the well-known Sony AN-LP1, but expensive. there is a cheaper one, although said to be a bit less sensitive : Degen DE31 or Kaito KA31 (same hardware, DEGEN is the chinese make, KAITO is the exportation make). See review here : http://www.radiointel.com/review-degende31.htm

The Degen can be found on eBay for 16$90 + shipping (from Hong-Kong). You can also go to some american web site such as Radios4you.com (I don't have any interest with them, I'm just a customer, and they seam to propose the cheapest prices on the US web : $34.95 + $7.05 shipping). They resell the KAITO radios and accessories in the US, quite quicky (I received my antenna in 3 days), with American waranty and manual.

No, don't ask me : I did not try the antenna yet : I'm currently traveling far away and the antenna is in the US in my sister's home.

In April of 2004,I slipped off my ladder in my back yard and fractured the two big bones in my left wrist.Get a few feet of wire and wrap a few inches around the antenna or connect to the antenna jack of your radio (if it has one) and tape or pin the other end of the wire up to a window.That should help some.Be extra carefull up there on that roof and ladder next time.

Cool! Looks simple to make and inexpensive. How do you raise the antennas,
do you have them on your roof or somewhere else?

Basically, if there is a lot of fading and variability in the signal,
the Automatic Gain Control can smooth it out. It might help you on a
fading and choppy foreign broadcast. It can smooth out a ham SSB
signal. I like to set the AGC to off on CW because then I can hear a
"pop" at the beginning of each dit or dah; otherwise the reception is
smoother and I hear no pop. For RF gain, I like to set it on the
threshold between increasing and decreasing the signal. Any higher a
setting, and atmospheric noise seems excessive, to me. I'd let your
ears be your guide.

The choppier the signal, the more you might use AGC, and the faster
the settings.

The smoother and stronger the signal, the less it might be needed.

RF gain, I just keep at the threshold, and don't diddle with much.

Other ears may vary...

Yes, this is one of the few remaining fun aspects of
SWL these days -- Jordan of all places, still on shortwave.

As the shortwave bands continue to slowly but surely
quiet as stations leave the air, this is part of the strange
21st century story of the death of shortwave, that sees
countries like China and Cuba still on the air, supposedly
broadcasting (they think) to Americans and others, while
most folks are focused on the internet and TV.

That said -- I am one of the SW die-hards so I don't
look forward to the day when the bands fall silent
permanently, except most likely for religious evangelists
and political extremists.

Thanks all for reponding. Too bad this is just for the MW band. I might
still still try it.
I going to wait on some more reviews.
I built my own loop too. I used copper tubing for the main loop and heavy
wire for in the 2nd loop. It works OK but it's so big and bulky it's a
hassle to use in the room.

I have to constantly turn it and use the adjust the resistor for each
frequncy. It was fun to build though. I built it when I first got into SW
and had visions of picking up far away planets with it :)

It's good for when it's raining bad and you still want to pick up certain
stations.

Lucky

>

It might be safer or better to say that transformerless
amplifiers(OTL), either
stereo or mono power amplifiers can almost always operate safely
without a load.
I remember a Kakimichi ~50W unit that tended to go into ultrasonic
oscillation
unless it was operated with something close to 8 ohms.

However transformer output amps will more freqeuntly then not self
destruct
with any significant power. Tubes survive slighlty longer then
transisitors.
Transistors will very frequcnly "pop" on the first load sound impulse
where
tubes may survive the high voltage spike only to have the output
tranformer
arc through in short order. I have made nice money repairing older
Macintosh,
audio not PC, amplifiers that people had neglected to operate under
load.

And I made a nice bundle repairing a high power Marshall guitar amp
that
a doper guitarist fried by operating with the speakers disconnected.
this
unit operated with about 1400V DC on the plate. Most of us will not see

consumer power audio, and damn little pro, gear that has output
transformers.

I no longer do much work on tubed gear because in a +12V world I fear I
might
have becmoe a bit lax in my safety habbits.

Touching, while also touching ground, a 1400 plate line will KILL you!
A good tech I new screwed up back in 1985, he got just a little
careless
on a Marshal amplifier "head" and got bit but good.

Terry

The propellant mixture in the SRB motor is 69.6 weight % ammonium perchlorate (oxidizer), aluminum (16% by weight), iron oxide (catalyst, 0.4% by weight) and a binder (12.04% by weight). I'd have to check my references at work for the ozone-depleting potential of the oxidation products.

Yes,

I really feel terrible for Art. He was with her a long time and they seemed like great buddies not just man and wife. Many married couple are not really "really buddies" and share the same hobby with each other. He is getting on in age too. It's must be so so sad to be alone all of a sudden after all this time together. As I get older, I see how cruel life really is, no if, ands or buts.

Yes, it is beautiful too, but just look at the news everyday. Nothing but depression.

Tell me, how come there isn't a "good news all the time" news station? Where miracles and good things are shown to uplift people's hope, faith and spirits?

The only thing that seems to make MONEY is death, crashes, war and heartbreak. It says a lot about us and our society.

Lucky

Whoops, it would be the perchlorate derivatives and not the oxidation products that could have ODP.

An untuned air core loop like the Wellbrook works well beyond the
shortwave band.

I can see someone getting twice as many AM BCB stations with a loop
antenna since they have good nulls. The stations were probably there
all along, but unlistenable due to multiple stations on the same
frequency. Put the offending station in the null and you get a new
signal.

In some locations of the bay area, you can hear two TIS on the same
frequency. With the wellbrook, you can null one to hear the other. Er,
not that you really need to hear those things. I can listen to those
TIS for about 25 miles in the daytime with the Wellbrook. I've posted
this before, but this is a recording of the LAX TIS that I did from
central Nevada, about 90 miles north of Las Vegas.

I rarely ever use earbuds or earphones because I just dont like to wear them at all,my eyeglasses give me problems enough rubbing around on my nose and making it hurt.Even so,on the rare occasions when I do use earbuds and if whatever device I am using with them,radio,my sound amplifier gadget,cassette recorder/player,whatever,I never let the earbuds get too close together.

Loops of different shapes and sizes should be easy to build.You can use a simple tacked or glued together wooden frame,rigid foam from packing,cardboard,any number of things to wind the antenna wire around on.

Hello.

I've seen the replies already posted and I agree with most of them. I too cannot understand why you can't see a difference with a synchronous detection circuit. I believe this circuit is one of the greatest advances ever made in shortwave radio listening.

One thing is does which has not been mentioned here is that, on most receivers, it lessens the audio distortion and this can be easily heard, even on a daytime local MW station. (On the Grundig Satellit 800, it HALVES the distortion! And by the way, yes the Satellit 800 had q.c. problems - my "early" one had to be sent back to Drake after only 3 1/2 years - but I really like that radio.)

And on my AOR AR7030 Plus the difference in reception quality on weak signals is amazing. With the sync on, I rarely have to switch over to ECSS tuning.

Your opinion is certainly as valid as mine but I have to tell you that, unless someone invents something better, I won't buy ANY shortwave receiver without a sync circuit.

I agree with you 100% about the clocks on radios. As you can now buy a small portable radio-controlled ("atomic") clock for $9.95, who even needs a clock on a shortwave radio at all, except perhaps on a portable so it can be used as a clock-radio when traveling. (Even in that situation the $9.95 "atomic" clock is more reliable!) Did you know that some LaCrosse table/wall "atomic" clocks can be set to read UTC?

But I still love my PASSPORT (and WRTH too) and would not be without it. (All the above represents my usual "two cents.")

Best,

Joe

>It makes a world of difference if the tests are above or below ground.

Yes. "The Effects of Atomic Weapons" published by the US govmnt
in 1963 had a list of announced tests. (The later "Effects of
Nuclear Weapons" dropped that appendix).

You can also (as I did in a post in seattle.general several years ago)
compute how many megatons were exploded by taking the values for worldwide
fallout from fission products and work backword. As I remember, it came
out to around 250 megatons in above ground testing.

But most of those test would have made no long term contribution
to atmospheric dust or the chemical composition of the atmosphere.
Fallout settles out fairly quickly, as many published maps for fallout
patterns show, so won't effect climate.

Compared to solar energy, the energy release of an atomic bomb isn't
much. A megaton is defined as 10^15 calories, so the solar energy
received by the United States at midday is about 2 megatons per second.

Global warming doesn't come from any direct energy release, but from
the change in the characteristics of the environment. Like the
infared characteristics of the atmosphere, or the reflectivity of
atmospheric dust, or clouds.

One thing left out of postings earlier in this thread is that not only
is CO2 at the highest level in the ice core record, but the increase in
the level over the last couple of centuries is several (10s to 100s ?) of
times FASTER than any other point in the record. (Doesn't anybody else
here listen to the BBC's "Science In Action" or ABC "The Science Show").
Right at this point in time, there isn't anything, besides us, that
could have done that.

Hey Everyone!

I'm thinking about a new radio and/or an antenna pre-selector/active loop/tuner. I'm in Suprior WI USA right at the Western tip of Lake Superior.

I started with a Kaito 1102 which I still love, then moved on to an Eton E10 and E100 (the girlfriend has the E10 now and my oldest son has the E100), then got a Sangean Super 909 from radiolabs (which I love), and also an Icom IC-R5 for work, and a Degen 1105 just for fun.

I've got a 75ft longwire outside with a 4ft copper plated ground rod, and a Degen DE31 active loop.

Thinking about antenna stuff... should I go with the Palstar AA30, the MFJ 1020C, 1022, 1024 outdoor, the Vertronics AT-!00, or the Ameco TPA? I might be missing some makes/models and would be interested in hearing comments about them. How about the LF Engineering H-800 or 900? (trying to stay under $150 or so)

When it comes to a new radio, I'm interested in the Icom R-75, a reconditioned Grundig Satellite 800 Millenium from Universal, and of course the new Eton E1. Or maybe the Palstar R30 series or the Yaesu 100B?

I'm just tossing around serious ideas in my head, and thought I'd toss them around in yours as well!

Thanks in advance for any replies! Also, thanks for keeping things "on-topic!"

yah !
I am finding the Degen 1105 one of my favorite radios..
I walk lots.. so having something that fits inmy shirt pockt and can
pick up shortwave is.. really cool !
Very nice little set.. picking up Radio Ausralia 10,000 miles away is
quite cool

The whip is sensitive enough so you can find out how shortwave signals
are polarized in your area.. moving the set around to get a better
signal..
again, fun..

Here's a quote from Carl Sagan speaking to 100 megatons. I read the info
about 10 from print media, I believe a periodical, and don't remember
which one.

"But what if nuclear wars can be contained, and much less than 5000
megatons is detonated? Perhaps the greatest surprise in our work was
that even small nuclear wars can have devastating climatic effects.
We considered a war in which a mere 100 megatons were exploded, less
than one percent of the world arsenals, and only in low-yield
airbursts over cities. This scenario, we found, would ignite
thousands of fires, and the smoke from these fires alone would be
enough to generate an epoch of cold and dark almost as severe as in
the 5000 megaton case. The threshold for what Richard Turco has
called The Nuclear Winter is very low."
<http://www.cooperativeindividualism.org/sagan_nuclear_winter.html>

Incidentally, AFAIK both the US and the USSR have exploded 100-megaton
nukes, and the resulting nuclear winter, uh, caused global warming.

Okay, so at this moment CO2 is trapping heat. Let's heat our homes and run
our cars with it, and before long we'll be running out of CO2.

Let's insulate our homes with CO2! The stuff we use now doesn't let heat
in or out. CO2 would let solar heat in, but not out, warming our houses
and cutting down on fossil fuel usage.

>> Talk about "good for a laugh". Krakatoa virtually obliterated the sun, and

It's well documented that the earth has been warmer than it is today, and
has been colder than it is today. If you believe the entire planet somehow
found perfect static equilibrium and remained at the same temperature for
a billion years until mankind started making engines, nudge the ostrich
next to you and ask him if he believes it too.

>> Anyone who believes that the best efforts of all mankind could change the

>
> Best efforts of all mankind? Freons and halons do a very good job at destroying ozone
> and they are "recent" inventions.

Uh huh. That's another subject. A while back I took NASA's figures and
factoids and did a little back-of-the-envelope calculation. I took all
the freon ever made (figuring something like 10 trillion cubic feet per
year since 1940) and put it ALL into one tiny wedge of sky to let it
wreak its destruction. With NASA's figure that one molecule of this
stuff destroys 100K molecules of ozone, I figured it would take about
five hours before all the freon was used up and solar production of ozone
resumed in my tiny wedge of sky.

If you just took the time to calculate the volume of the stratosphere
where they say the ozone layer is, you'd easily see that mankind could
never produce enough freon to destroy the ozone layer if we put all the
earth's resources to the task.

And all this ignores the bullshit story that these really heavy molecules
of freon get transported up there by thunderstorms, but much lighter
molecules of ozone (and now CO2) don't get transported up there. i.e.
thunderstorms are selective transporters of chlorinated hydrocarbons.

What really happened is that DuPont's patents on the Freons ran out, and
NASA needed more money to waste on parking Ph.D.'s doing research on
froggies and navel lint, and the two worked together to stop the worldwide
use of Freons in favor of other compounds that DuPont owns patents on.

> The combustion engine is also a relatively recent
> invention. Too bad that the greatest CO2 level increases coincide with the large scale
> introduction of the combustion engine. The problem with CO2 in the atmosphere is that
> there isn't much of it in the first place so any increase can have a large effect.

CO2 isn't a problem. Plants breathe it and exhale O2. As soon as we start
using the existing CO2 for our solar energy plants, we'll quit making CO2
and run out and won't have global warming any more.

Ok, Lenny, here is a (somewhat) simple explanation. The Automatic Gain Control attempts to keep the volume level the same on all stations so that if you turn the volume up on a weak station and then tune to a stronger one, you won't get "blasted" out of the room. The reverse also holds true - if you've set the volume based on s atrong station and then tune to a weak one, the volume will be about the same and you'll be able to hear it.

"Fast" AGC and "Slow" AGC are just what they say they are. One setting makes it work quickly and one makes it work slowly.

Of course your question is "why" and what does it mean to me?

When tuning the radio, you want a fast AGC to keep all the volume levels approximately the same so that, if you tune to a weak signal, you can hear it, and if you tune to a strong signal, the volume level will not be too great. AGC has been featured on radios since the 1930's (maybe even earlier) but, on most consumer AM/FM radios, it is so common that no one mentions it any more (just like the "number" of transistors - no one "cares" any more). But on shortwave, not only is it very useful, it is necessary to be able to adjust it. You cannot take advantage of a radio's DXing abilities unless you have an adjustable AGC (among other things!).

Once you have tuned in a station and have decide to listen to it, you switch to slow AGC. Why? Because signal strength fluctuates greatly on SW signals and a slow AGC, not responding as fast as fast AGC, will tend to keep the volume level the same and will not fluctuate up and down as it would if you used a fast AGC. (You'll hear background "hiss" rising and falling as the signal-strength increases and decreases - look at your S-meter, but the volume level of the broadcast will stay about the same.)

So, to make a long story short, when tuning your radio, use fast AGC. Once you find something to which you want to listen, switch to slow AGC.

Now what about AGC "off?" You use that in conjunction with your RF gain control when chasing the most exotic and weak signals (it is also sometimes useful when listening to Hams on SSB). The AGC can attenuate (lessen) the apparent strength of some signals so, by turning it off and adjusting the RF gain to maximum, you may be able to hear the station. Note that you do NOT want to casually tune with the AGC off. You'll get "blasted!" (Just try that and see!) You CAN tune slowly in, say the tropical band, where you might expect to find some unusual or difficult-to-hear country. But always you must do this carefully. You

can also (rarely) use this to minimize "overload" from a strong station located close to your location; in this case, you would turn the RF control all the way down. With an ICOM IC-R75, though, you should rarely, if ever, need to do this. Remember, most AGC sections, certainly the one on your ICOM, work extremely well and rarely, if ever, cause problems that would make you want to turn the AGC off.

So, in conclusion, you will use the AGC fast setting for tuning and the AGC slow setting for listening. AGC off will be used rarely, if at all.

I hope that's of some help to you.

Best,

Joe

The D1875 offers fair performance for an analog receiver. It is
completely eclipsed by the performance and sheer number of features on
a Degen DE1103, which can be had now for about the same price a 1875
sold for 15 years ago. The RFP-11 is essentially the same as the 1875.

I already told you. Socialism. Just about every industry you mention was
driven into the ground by greedy socialist unions, who went far beyond
ensuring fair compensation and decent working conditions for their workers
and started demanding extravagant overcompensation because they could get it.

For my ancient but trusty JRC NRD-525 radio, I'm looking for a CW filter.

Either the CFL-231, 300 hz width, or the CFL-232, 500 hz width.

Also, I have the narrow SSB filter, the CFL-218, 1800 hz width, that I will trade even-steven for one of the CW filters.

Tnx,

Bob

I have read of bands bleeding over on the rfp-11 (also sold under the
kenwood name).
I have 3 d1875s and a couple of them are extremely quiet and sensitive
on SW, at least as good as my 1103. They are very good on MW but not as
good as the 1103. The 2 that are excellent seem to be a newer version
with a curved grill over the speaker. This must have some circuit
tweaks over my 3rd 1875 which may be a slightly older version that has
a flat speaker grill. Also the tone control on the 1875 is very
effective. I still like my 1103 and my desktops better though but for
15-20$ on flea-bay (or goodwill) these cannot be beat, IMHO.

One other thing comes to mind: when listening to AM DX, turn off your AGC.
You may want to set AF gain (Volume) up quite high, after first turning down
RF Gain. Control the "volume" by the RG gain (instead of the usual AF gain.)

Telamon,

Maybe - Carter [K8VT] should ask the French, Germans,
Japanese, Russians is they would like the US Economy
with it's Higher Rate of Growth and Lower Un-Employment.

The reality is that very few National Economies did as
well in 2005 as the State of California which is about
One-Tenth (1/10) of the Total US National Economy.

It is clearly un-fair to compare a national economy that
is less-than 1/10 the size of the USA : To a National
Economy that is Ten Times Bigger like the USA.

Comparing : Big Apples to small potatoes a favorite

http://online.wsj.com/public/article/SB113639173784337602.html?mod=todays_free_feature

The U.S. Economy has traveled a long road through Four Years
of Expansion, rarely swerving from a Course of Steady Growth.

Brian Wesbury writes:
* Real GDP Increased 3.6% at an Annual Rate during the first three
quarters of 2005 and through November nearly 200,000 Jobs-per-Month
were Added.
* Real Average Hourly Earnings in November were 5.8% above their
1995-1999 average and the net worth of U.S. Households hit $51.1
Trillion in September, an 11% (or $5 Trillion) increase from the
previous year.
* According to the Fed, U.S. Manufacturers produced more in November
2005 than any Month in History.
* In addition, the U.S. Exported $1.3 Trillion of Goods and Services
in 2005, making it the Largest Exporter in the World.

The Gipper's Type of Tax Reconciliation
- by - Julie Kesselman - Dec 9, 2005
http://www.townhall.com/opinion/columns/JulieKesselman/2005/12/09/178571.html
* Real economic growth averaged 3.2 percent during the Reagan years
versus 2.8 percent during the Ford-Carter years and 2.1 percent during
the Bush-Clinton years; the productivity rate was higher; real median
family income grew by $4,000; and interest rates, inflation, and
unemployment all fell faster under Reagan than they did immediately
before or after his presidency.
* Note - This type of economic policy crept back into favor a few
years ago, with President Bush cutting taxes in his first term. *

These tax cuts and other policies should be credited with helping the U.S. economy grow by 4.3 percent from July to September this year and adding 215,000 jobs last month.
* In addition, Real Gross Domestic Product (GDP) has grown at 3 percent or better for ten straight quarters for an average rate of 4.1 percent, the best performance since the middle 1980s.
* Business profits have increased at a double-digit pace for nine straight quarters -- for only the third time in the past 55 years.

If all that energy is being re-radiated then what keeps the side of the earth not in direct sunlight still relatively warm at night? Obviously, some energy must be retained otherwise things should get considerably more cooler at night!

You might want a bib to wipe up your drool. Temperatures during summer along the coast are often around freezing or slightly above 0 degree Celsius. The interior plateau is much colder
and often doesn't get above -20 oC during the summer. Strangely enough, it is the melting along the coast line which is altered by increased global temperatures. I do salute your ability to be selective with facts.

Interesting. The largest USA nuclear yield reference that I could find was to "Castle Bravo"
in October 1954 and it was only 15 megatons which makes it well short of your 100-megaton statement. The largest Soviet air test that I could find was of 50 megatons and was a

high-altitude air test. Not much in the way of combustible matter at high-altitudes. Everything that Sagan refers to is low-altitude bursts over cities which to no one's great surprise would spew lots of dust and smoke. Very good imagination on your part.

Darn! I will try once again and drive the point home to you. It is the high-energy radiation
that gets through but the less energetic infrared energy that gets trapped. Unless, of course,
you believe in a re-radiation process that is 100 % efficient!

>

> a billion years until mankind started making engines, nudge the ostrich
> next to you and ask him if he believes it too.

So to you it is mere coincidence that the highest levels of CO2 just happen to occur after the
invention of the internal combustion engine? If it isn't due to use of fossil fuels then what
is the cause of the increase of CO2?

>

> never produce enough freon to destroy the ozone layer if we put all the
> earth's resources to the task.

I did calculate the volume of the stratosphere (between 15-30 km) and I did use your 10 trillion cubic feet per year value and found that Freon outstripped ozone by approx. 10^6! And
this includes an estimated 85% photodegradation factor for the freon with reactive stratospheric O2. The 10^6 figure does not include the 1 molecule of Freon destroying 100k molecules of ozone. My values show that mankind can produce enough Freon to destroy the ozone
layer. I suspect that the biggest flaw to the calculation is using your Freon production estimate.

>
>
> And all this ignores the bullshit story that these really heavy molecules
> of freon get transported up there by thunderstorms, but much lighter
> molecules of ozone (and now CO2) don't get transported up there. i.e.
> thunderstorms are selective transporters of chlorinated hydrocarbons.

What does the molecule's mass have anything to do with it? The densities of a lot of halons and Freons are close to that for the density of air at sea level and it takes no stretch of the imagination to have these things get into the stratosphere. Why should ozone be transported up when it is made in the stratosphere? Ozone in the troposphere is bad and tends
to be reactive with things in the troposphere. Freons don't have a "sink" as does CO2. The CO2
sink would be the oceans and plants but they have a certain capacity to handle excess CO2. The
rest does go into the atmosphere. Winds aren't selective transporters but your imagination is
very selective!

>
>

She didn't die in her sleep. She was treating the attack in the same manner she had previous attacks. The attack itself started while she was asleep, which is not at all unusual.

Also, many people do die of suffocation/asphyxiation in their sleep. Snorers die regularly as a result of apoxia.

In Memoriam: Ramona Bell
Art Bell's beloved wife of fifteen years, Ramona, died unexpectedly last night after an asthma attack. At present, the exact cause of Mrs. Bell's death has not been determined. It apparently took place during her sleep.

Until her death, Art and Ramona Bell had not been apart a day since they were married. Mrs. Bell had suffered from asthma for years, and took her normal steps to control the attack, which occurred sometime last night in Laughlin, Nevada where the Bells were taking a brief vacation. Ramona Bell was 47 years old.

Don't try for specific frequencies at this point, but just tune around the major shortwave bands. Skip the external antenna for now and just try to position yourself near a window and away from the pc and wifi.

Try the following:

5.8 to 6.3 mhz in the evenings.
7.1 to 7.5mhz in the evenings and mornings.
9.5 to 10.0 mhz in the evenings and mornings.

And since you are on the east coast try 9580 in the early morning hours, say 6:00 to 8:00 for Radio Australia direct from down under.

Be sure and post your results...hopefully you will hear a bunch of signals, especially around 6.0mhz at night.

At $15.00 that is a pretty good deal - comparable pricing to the Degan
and Tecsun analog units on Ebay. Yes, the sound from the Magnavox is
quite pleasant and easily beat the Sony analogs it competed with in the
early 1990's.

Did you find the "Hidden band" yet? Just push the slider switch over
one more notch to the right into the analog scale section and it
connects to the highest shortwave band.

What might ALSO help is opening the window a crack & sticking the whip
antenna out..

tried 9.580 at 13:40 UTC.. got a thready weak signal, UNTIL I opened
the window & started moving the whip around..

The very strongest signal (using a Degen DE1105) appears whe you
point the antenna NE (checked with a compass..)

- Which means the Radio Australia signal is bouncing down from he
Southeast (or northwest)

Try this with your 505, I'm sure you'll get results

> Essex, Maryland

I think WTOP is reformatting it's successful all news format as Washingtonpost Radio or something similar. Hopefully they will keep the traffic and weather reports we have all come to rely on.

Here's a copy of a portion of the article on Washingtonpost.com:

"In Washington, where public radio's more serious news and talk draw a larger portion of the audience than almost anywhere else in the country, Bonneville is joining its successful noncommercial competitors by betting that the appetite for news has not been sated. With both public radio and its own all-news WTOP going gangbusters, Bonneville has decided to scrap its rock station and develop a new kind of news format. Washington Post Radio will debut in March on WTOP's old frequencies (1500 AM and 107.7 FM), presenting the newspaper's reporters and columnists in a radio news and talk format that is Bonneville's effort to extend what works elsewhere on the dial."

Unclear to me is what this new format will cover. Hopefully they will not fix the highly successful all news format too much.

Source record: 57723

Hello Everyone,

I am new to SW listening.

The few times I have heard SW, I assumed that the BBC was the only broadcasting station.

My dad used his SONY ICF-2002, to pick up the BBC news in the mornings.

(So.. I never used to trouble the controls)

Much later, the AC adpter got damaged & he stopped listening to the BBC. (I believe he mentioned the SONY ate batteries)

It gathered dust for a while, & then I tried using it with an adjustable, DC voltage adapter & realised there was nothing wrong with the radio itself.

Since then, I learnt:

1. The BBC isn't the only broadcast station on SW.

2. Signal reception would be improved if I learnt how to build a better antenna.

3. I should really return the radio w/DC adapter to my dad so he could listen to the BBC again.

So I bought a Kaito KA1102 portable radio last November 2005.

Initially I was thrilled.

Then after the excitement of owning my own wore off (i.e. about a month of SW listening), I suddenly noticed that whether operated on battery or Adapter:

1. A high pitched whistle on the local FM station.

2. A warbling, high pitched whistle on the SW bands.

NOTE:
I am resident in South America.

Within my neighbourhood, two people use broadcasting radio sets to contact their inland business operations & two taxi service bases operate near my home.

The whistle is sometimes so loud that it overpowers the voice tones of the announcers... which is very annoying.

The manual didn't say anything about high pitched whistles, and I have tried moving to different locations at home (i.e. where I got good reception before), all to no avail.

Fortunately, it doesn't happen all the time during a sitting, so I just turn the radio OFF, pause for a bit and then turn it back ON.

That works.... for a short while.

I would really like to understand what causes this problem in my KAITO KA1102 and what I should do to correct it. (i.e. Preferably before I return the SONY to my dad)

I believe that if I can resolve this problem I will have a great portable radio.

My dad's SONY ICF-2002 has been around for years, and except for the adapter issue and some whip antenna wiggle, gives no trouble today.

Your suggestions on my KAITO 1102, (i.e. besides shipping it back to the Manufacturer's) would be most helpful.

Kindest regards,
SW Newbie,
Yerodin P.

1025. ABOUT - The TG33 In-Door AM/BCB Medium Wave Active Loop Antenna

Newsgroup: rec.radio.shortwave
Date: 2006-01-09 15:36:03 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1136820963.452494.233670@g14g2000cwa.googlegroups.com>
Source record: 57724

ABOUT - The TG33 In-Door AM/BCB Medium Wave Active Loop Antenna

The TG33 - Is special designed and manufactured by a Chinese company,
it is perfect for the Medium Wave Band (AM/BCB) Signal Reception using!
? Manufactured by a Chinese Company = Degen / Kaito /Tecsun / ______ ?

TG33 - Frequency Coverage: 520 kHz - 1710 kHz
Weight: approx. 180g (without battery)
Power Supply : Two(2) AAA Size 1.5V Batteries

The TG33 - With this TG33 In-Door Medium Wave Active Loop Antenna, will
improve the reception on the Medium Wave Band (AM/BCB) between 520 kHz
to 1710 kHz for any AM/MW/BCBC Radios when compared to it's built-in
(internal) Ferrite Rod AM/MW Antenna.

eBay Auction Item # 5851728430

The TG33 - It works with the any Radios that have the Medium Wave Band
(AM/BCB).
* The AM/MW Signal from the Antenna can be Coupled to the Radio via
the Built-In (Internal) Ferrite Rod Loop-Stick Antenna.
* Also there is an Additional Adapter Cable for some AM/MW Radios
which use Binding Posts as the External Medium Wave Band (AM/BCB)
Antenna Input Jack.
* Plus there is a 15 Foot long Connecting Cable that comes with the
Antenna that connects the Loop Antenna Element to the Control Module.
* Which allow the you can Hang-Up the Soft Loop of the Antenna
in-the-Air to get better AM/MW/BCB Reception.
http://cgi.ebay.com/TG33-INDOOR-MEDIUMWAVE-ACTIVE-LOOP-ANTENNA-FOR-MW-BAND_W0QQitemZ5851728430

The TG33 - Coming with the following items in the Original Package (No
Batteries), Operation Manual in English is provided!
http://cgi.ebay.com/_W0QQitemZ5851728430

NOTE - The TG33 would appear to be a "Window Loop" like the Degen DE31
Shortwave Loop Antenna
http://i22.ebayimg.com/03/i/05/e9/9c/9e_1.JPG

FYI - This Message is being Posted for Informational Purposes Only
- Use the Information at your own discretion.

NOTICE - This is NOT my eBay Auction and
I am NOT associated with this eBay Seller.

FWIW - The above is a basic re-write of an eBay Listing in-order to
clarify some of the English Language terms and usage related to Radio.

CAUTION - I Am Not Responsible For Any Errors Or Omissions [.]

hope this helps - iane ~ RHF

Review 2005: Climate going crazy
24 December 2005
NewScientist.com news service
Fred Pearce
More Stories
Explore: earth
THE ominous phrase "tipping point" entered the vocabulary of climate
science this year, sounding a warning that global warming may soon
spiral out of control.

The permafrost beneath the west Siberian peatlands is thawing,
creating giant lakes and swelling rivers. More worryingly, the melting

of the bogs - which cover an area the size of France and Germany combined - could unleash billions of tonnes of methane. This greenhouse gas is 20 times more potent than carbon dioxide, so the event has the potential to accelerate global warming.

Meanwhile, higher air and sea temperatures dramatically reduced the extent of sea ice in the Arctic Ocean this year. Satellite measurements analysed by the National Snow and Ice Data Center (NSIDC) in Boulder, Colorado, showed 20 per cent less ice than when NASA took the first pictures in 1978. "Feedbacks are starting to take hold," says NSIDC's Ted Scambos. Newly thawed expanses of ocean absorb more solar radiation, which in turn melts more ice.

And this month one of the linchpins of the climate system, the global ocean circulation system known as the conveyor belt, was found to be faltering, as evidenced by a 30 per cent reduction in the northward flow of warm water from the Gulf Stream over the past decade. The worry is that this could herald one of the most widely discussed tipping points of all - a shutdown of the conveyor that would plunge western Europe into freezing winters and threaten climate systems worldwide, including the Asian monsoon.

Looking through a book on the nuclear infrastructure, "Nuclear Battlefields",
it didn't appear that the US deployed anything much bigger than 9 megatons,
on some of the old Titan missles. Somewhere in my readings, I remember a
quote that there wasn't any military use for anything over a half a megaton.

>somewhere I have read of a 57 MT explosion by the USSR but that was
>subsurface 1980's I belive and not sumoething would afect global
>warming

When they get that big, there's no such thing as a surface anymore.

Another vague memory of a quote was that that test showed that there was
a maximum useful explosive yield, and this test exceeded it. When you
make the bomb too big, it exceeds the ability of the local environment
to absorb the energy and it ends up blowing a lot of the energy out
the top of the atmosphere into space.

I remember my junior high science teacher talking, a few years later,
about how the cloud chamber they set up that year was so busy it was scary.

1033. Computer interference : I can't believe it...

Newsgroup: rec.radio.shortwave
Date: 2006-01-09 18:29:56 UTC
From: Charly <No.Emails@No.Spams>
Message-ID: <43c2aba5$0$5260$626a14ce@news.free.fr>
Source record: 57732

Hello,

I knew that electronic devices installed near by the radio could create noise and the like, and that any wire passing close to the radion could bring such interferences. For example I avoid in the hotels to use the AC adapter of the radio (ATS909), because I simply can't anything but noise on SW...

I'm often having the computer on, not to close from the radio (1.2 m far ?) and I'm listening to the radion while checking on the computer (laptop) frequencies and the like to identify what I'm listening.

When I put my hands on the computer, the noise level (quite low at this distant), is raised : the S-meter gain 1 bar on 9. And this is worse when I'm using headphones... So my body behaves like an antenna for the computer waves...

Perhaps I have a too sensible radio ? ;-)

Really amazed...

Charly
Sangean 909 +
coax fed 4m random wire dipole glued to the window.
(works better that ANT-60 reel antenna in the same conditions)

Have a little bit of a sensitivity issue there Klaus? Wasn't it the German Master Race that perpetuated Naziism and the ordinary German people that supported it at the time whether blindly or openly.

I got a Sangean ATS 505 for Christmas and can't seem to pick up anything. I've scanned several frequencies/sites listed on the web, moved the antenna around, day and night, used the external antenna, etc. etc. Can't seem to raise a thing! Been trying for several days now...what could I be missing.
Icefish

PS. I live in central NH so interference is minimal...do have Linksys and repeater in house along with a couple cordless phones - could that be doing it?

Thanks in Advance

Z104 bit the dust, with WGMS (Classical 103.5) taking the 104.1
frequency slot. Thank heavens that WGMS is still alive and well,
although where I am its signal isn't as good as it once was. So WGMS
is being broadcast out of Waldorf, MD now, huh?

David wote:
> Make sure the SSB is OFF. Try Narrow Bandwidth.

Thank you for replying.

However, on the KAITO 1102 radio the SSB feature is only accessible
(i.e. useable) on page 9.

Page 6 catches SW signals, doesn't allow SSB, and I still hear the whistle.

(It sounds a bit like a mosquito buzzing in your ears.)

I try hard not to pull the unit to pieces everytime I can't hear BBC's outlook or Interview.

A few days ago BBC interviewed Mahatma Ghandi's grandson..... I really wanted to hear that interview, I instead heard some of it and mostly mosiquito buzzing in my ear.

More help would be greatly appreciated.

Kindest regards,
Yerodin P.

This from the country that had racial segregration long after WW2 with
firmly entrenched anti-miscegenation laws, implemented by you, the
ordinary American master race? hey you pious hypocritical puke - youre
HILARIOUS! haha your fondly touted bastion of national identity,
NASA,might as well be called NAZI, for it wouldnt have existed at all it
not for the Nazi scientists you knowingly and intentionally welcomed
into the programme. Theres little difference between the rhetoric German
citizens embraced under the war time National Socialists and the
rhetoric many American citizens embrace under the current neocon
republican war-party regime. Now, take your American ideal of "blonde
and blue" and walk out into your street in the "greatest society the
earth has every known" and crow out about your "superior military
capabilties". Just dont forget to seig heil. not that you have to, its
always and inescapably implied ;)

> Kindest regards,
> Yerodin P.

I remember reading somewhere that the human voice is transmitted at a particular frequency, that is one of the reasons why we can hear each other. (i.e. we speak within the audible frequency range)

The article suggested that voices of different pitches have higher frequencies.

I was wondering if the whistle I am hearing on my KAITO 1102 is:
a. Within the audible frequency range of human hearing.
b. Higher than voice frequencies and
c. Being given more amplification than the voice frequencies. (i.e. by my KAITO 1102)

It seems logical, but I am really just guessing.

I will try to dig up the article.

Kindest regards,
Yerodin P.

Wow, 29 years bootlegging on ham and no FCC check? I think that's a
new record!! There's been a couple of guys on a Militia/Patriot
net every night on 3.8-0 mHz LSB for over 3 years now with phony callsigns
who still ain't got caught or even raised a red flag with either FCC or
OHS.
but if you went along for that long and got off with a slap on da
wrist, then woo-woo on you. (bet you were a good customer at the ham store
also eh? Did the buffoons sel you a big amplifier too with no license
check? prolly did..)

Have you tried the radio several miles away from your house? If there
is no whistle away from home, then at least you know it is a noise
generated in your neighborhood.
>
>Fortunately, it doesn't happen all the time during a sitting, so I just

If there is no whistle when you turn the radio on, but then after a
short while it comes back, it sounds like the problem may be with the
radio.
>
>

Also, have you tried the radio with and without batteries? That would
tell you whether it is something coming over your AC power lines.

www.google.com Photos Arnold Schwarzenegger Heil Hitler Salute.

I dont paticulary go for "blue Eyed blondes" any more than any other race,color,or creed of people.The so-called master race/super race of people is pure BS.I know that most Germans are anti-nazi.My older brother spent 1963 (U.S.Army) in Gemany,he told me many things about Germany and German people.Right after World War Two,a guy who lived up the street from me in a two story house,he was in Germany (U.S.Army) and he married a German woman and they had a little girl,some of the nicest people I have ever known in my life.I have chatted with many Germans in Germany via the intenet before via email and instant messnger,I know they (Germans) are good,decent people.By the way,the so-called Aryan "race" of people are a mixture of Iranians and Indians.(India) Why do you think Hitler used that reverse twist of the Indian (India) Sun God logo? Now you know.

After a 16 month delay I had a chance to go by the University's library today and
I looked up Burhans""Radio Elecronics" February 1983 Burhans"VLF Active Antenna"
piece.

I found parts one and two on line ,but parts 3 through 5 were additonal goldmines.

April 1983 Constructino with charts for fine tunning respsone.
May 1983 Passive Tuner.
June 1983 Loop Construction and ideas on tuning. Shows a better way to test a loop antenna.

An unexpected bonus was found in the December 1983 with a "Notch MW/BCB

traps for the SWL". A much different fitler design then commonly used.

July 1983 had a very interesting piece on using Loran C at 100KHz to calibrate a
1MHZ refference.

The magazine was on microfilm and their printer was down so I am going back with
a high resolution digtial camera and I hope to get useable pix.

If anyone has access to the paper copies they would be well served to at least read
this great refferences,. Ralph Burhans understood antennas better then 99% of the
"real RF engineers out there. I only whish I had realy bothered to read and study the
designs when they weer origninallly published!

RHF if you are interested, if this works I will create and post a short term
hotmail account where I can send you the pix for your SW antenna group.
Be early next month at the soonest.

Terry

1059. KBS Transmitter location please ?

Newsgroup: rec.radio.shortwave
Date: 2006-01-09 23:11:15 UTC
From: Charly <No.Emails@No.Spams>
Message-ID: <43c2ed92$0$29924$626a14ce@news.free.fr>
Source record: 57658

Dear all,

I was able to listen to KBS World radio (Korea) in French on 5955 kHz tonight, with the help of my portable random dipole and ATS909 : 5 bars on the S-meter (no so stable but very clear sound), 0 bars and hardly possible to hear off the whip.

I'm pretty sure that this transmission is not comming from Korea. I've they have some agreement with BBC. Do they transmit this program from the UK ?

I was also able to pick up VOA in portugese on 9805, which is said to be transmitted from the Ascencion Island ??? Again hardly audible off the whip, clear even if not very good quality reception.

Have a good night,

Charly

While I am sure that the courts will toss this, I don't have deep
enough pockets to even
think about risking the outcome. Call me a coward, but this group is at
best "fun".

At the very lest I am sure my mispellings will "annoy" someone.

Given a new law has been signed into effect that requires uses to sign
with their real name
if:

" Annoying someone via the Internet is now a federal crime.

It's no joke. Last Thursday, President Bush signed into law a
prohibition on posting annoying Web messages or sending annoying e-mail
messages without disclosing your true identity.

In other words, it's OK to flame someone on a mailing list or in a blog
as long as you do it under your real name. Thank Congress for small
favors, I guess.

This ridiculous prohibition, which would likely imperil much of Usenet,
is buried in the so-called Violence Against Women and Department of
Justice Reauthorization Act. Criminal penalties include stiff fines and
two years in prison.

"The use of the word 'annoy' is particularly problematic," says Marv
Johnson, legislative counsel for the American Civil Liberties Union.
"What's annoying to one person may not be annoying to someone else." :

Yes, thank goodness WGMS didn't get reformatted into some talk format
show. They are the only full-time classical music station left in the
D.C. metro area that I'm aware of.

I can only hope the listener base is such in D.C. that they will not
follow in the footsteps of so many other classical music stations.

Great explanation.
Now I get it.
Thanks Joe and everyone else who answered my question.
Lenny

Almost sounds to me like electrical noise/interference coming from somewhere nearby. I've had this problem as well. I tried not using the AC adapter that came with it, that helped somewhat. If I'm running appliances within 20 feet of my KA-1102 (like the dishwasher, computer, modem, etc.) I hear the buzzing you're describing.

My Christmas tree's lights made for a nice rhythmic buzz over the holidays. Had to turn them off each time I wanted to listen to my radio.

I would try taking the radio to an electrically-quiet area (like an empty beach, hilltop, or somewhere like that) and then see if you can hear these noises.

Good luck!

Jackie

Ground mass does most of the heat retention. This explains why desert sand
areas cool so much at night by comparison with solid dirt ground. Atmosphere
has a tiny contribution, but atmosphere doesn't go away in the desert at
night and it still cools inordinately there.

So the oceans are warming, but the land mass isn't. Guess CO2 only has
its magical powers over water... which is exactly what we need for
enormous solar energy collection.

I guess to you it is mere coincidence that the highest levels of CO2 just
happen to coincide with the greatest population in history. Funny, too, by
your own admission the highest levels of CO2 don't coincide at all with
the warmest planetary temperatures. But it's not important. What is
important is this magical property you ascribe to CO2. It is precisely
what we need to reduce or eliminate our dependence on fossil fuels.
We'll take so much CO2 out of the atmosphere to do our solar energy
collection that we'll be endangering plant life, to the extent that
we'll have to build massive CO2 generators to keep the atmosphere healthy
and feed plants worldwide. Then the environazis will have to "discover"
that H2O is a greenhouse gas so they can force us to stop using our hydrogen-
powered automobiles.

> molecules of ozone. My values show that mankind can produce enough Freon to destroy the ozone
> layer. I suspect that the biggest flaw to the calculation is using your Freon production
> estimate.

I lost my bookmark to NASA's figures about the height of the ozone layer,
but I found <http://hypertextbook.com/facts/1999/DmitryKhodorskiy.shtml>
which figures it's considerably bigger than you estimate. So let's use
your estimate so that I err on the low side.
<ttp://www.ucar.edu/learn/1_5_1.htm>, for example, says 16 to 48 km.
I'd also posit that a trillion cubic feet per year is a pretty drastic
overestimation of worldwide CFC production.

The earth is 24,899 miles in circumference, giving me a rough radius of
7,925.597 miles. The volume of a sphere is 4/3*pi*r^3. The volume of the
inner sphere at 15 km is thus roughly 2.093*10^12 cubic miles; subtract that
from the volume of the outer sphere at 30 km (2.1002*10^12) to give the
volume of the layer, 7,426,514,610 cubic miles.

One trillion cubic feet times 65 years is 65 trillion cubic feet. This is
a cube 40207 feet on a side, or 7.615 miles on a side, or 441.58 cubic
miles. (Remember also that 1E12 cu ft per year is 31689 cu ft / second
for the entire year. And we're assuming that ZERO CFCs are destroyed.)

Now we have to violate the laws of nature a bit. The atmosphere below
80 km or thereabouts is well mixed:
<http://snowball.millersville.edu/~adecaria/ESCI341/esci341_lesson06_vertical_structure.ht
ml>
so putting all the CFCs up into the ozone layer isn't really possible. But
we have to do it to destroy all the ozone.

Now, by violating the laws of nature and somehow getting every CFC ever
made up into the ozone layer, we come up with a density of 59 parts per
Billion of CFCs. The area of stratosphere you specify is quoted at 10 parts
per Million of ozone.

If the sun didn't continuously make huge quantities of ozone, we'd be doomed
because the CFCs would take out all the ozone. But it does make ozone
continuously, and that's what the environazis hope we'll forget.

Some of my bookmarks have died since I last did this exercise, and I can't
find a source on the daily amount of solar ozone production. When I last
did this, it was a matter of days before every last CFC ever made had hit
its 100,000 ozone-molecule destruction limit.

>> And all this ignores the bullshit story that these really heavy molecules
>> of freon get transported up there by thunderstorms, but much lighter
>> molecules of ozone (and now CO2) don't get transported up there. i.e.
>> thunderstorms are selective transporters of chlorinated hydrocarbons.
>

halons
> and Freons are close to that for the density of air at sea level and it takes no stretch
of
> the imagination to have these things get into the stratosphere. Why should ozone be
> transported up when it is made in the stratosphere? Ozone in the troposphere is bad and
tends
> to be reactive with things in the troposphere. Freons don't have a "sink" as does CO2.

The CO2
> sink would be the oceans and plants but they have a certain capacity to handle excess
CO2. The
> rest does go into the atmosphere. Winds aren't selective transporters but your
imagination is
> very selective!

<http://snowball.millersville.edu/~adecaria/ESCI341/esci341_lesson06_vertical_structure.ht
ml>

"Without turbulence, molecular diffusion would dominate any vertical
transport processes.

"Molecular diffusion favors lighter molecules over heavier ones.
Therefore, the lighter molecules would be better mixed through a
layer than would the heavier molecules, which would remain near
the bottom due to gravity."

Etc. Somehow the "bad" ozone from down here, that causes smog and such crap,
never rises to become "good" ozone, while (in the wild dreams of the
environazis) the much, much heavier CFC molecules rise right up there
as if they had their own private elevators. If the environazis are right,
then the thunderstorm winds are selective transporters of CFC molecules.

As you say, winds aren't selective transporters. Thank you for pointing
that out; it's what I believe, too. I don't believe there's any real
mechanism to get the CFC molecules up that high and keep them there for
any short length of time, much less the 200 years that's postulated.

Either CO2 does let heat in but not out, or it doesn't. Pick one and stick
with it.

Now, if you're really interested in seeing what affects the ozone "layer",
see <http://www.nature.com/news/2005/050228/pf/050228-12_pf.html>.

Thank you for responding Bob,

Your suggestion (i.e. operating the radio with and without batteries),
is well documented within the radio community.

Before writing to rec.radio.shortwave, I tried it with no change in
reception.

Over the weekend, I will try operating the radio several miles away
from my neighbourhood to rule out spurious signals specific to my area.

BTW...
Is trying different SW antennas using the KAITO 1102's external antenna
jack capable of damaging anything?

Prior to encountering my KAITO's problem, I have separately tried the
following:

1. Winding the included external antenna around different forms (i.e.
metal & PVC)

2. Connecting a 75 ohm coaxial cable via a plug similar to the antenna
plug.

3. Using a TV signal booster + some coaxial cable connectors + 15 ft of
cable in the hope that it would improve reception. (that was only
mildly successful, but the radio functioned w/o issue even after that)

4. Using longer lengths of non-coaxial wire.

I also tried wrapping sections of the whip antenna with aluminium foil.

The hurtful thing is... the 1st month after removing my KAITO 1102 from
the packaging, it intially worked without this noise.

Kindest regards,
SW Newbie,
Yerodin P.

Have you verified that you can, or can't, get standard stations like
WWV (5, 10, 15Mhz)? How about the AM broadcast band in your area?

That's the first thing I would do -- particularly check that you can or
can't get WWV on 5 or 10Mhz at night.

It could be as simple as a mode problem -- you have the radio set to FM
or SSB but are trying to receive broadcast shortwave (which is AM).

What kind of antenna do you have on it?

Universal came through for me in the end and I should acknowledge that. They red-labled my new radio after my last complaint and it's arrived an in perfect condition.

On the con side, it took some prodding to get Universal to wake up. On the pro side, they made good on the whole issue and never once tried to make it "my problem" (something I had been dreading).

In fact, they went beyond that by giving me gratis some accessories that I had ordered for the VX-7R. Universal has a problem to be sure and that's that it can't seem to ship product within anything that someone would consider a normal timeframe for in-stock items (seven days to get something shipped out the door that was sitting on a shelf in the adjacent room?).

But they do appear to be conscious about their image and their reputation. As long as I squawked loud enough, they bent over backwards to make things "right." But I would have been just as happy, more so in fact, to have not had to squawk in the first place than to get freebies to make up for the hassles.

Bottom line: I'll keep ordering from Universal and will recommend them to others but with the only caveat being that, for reasons that are unclear to me, they have a hard time actually shipping items with any speed whatsoever. I hope they can clean that up because it's the only smudge on an otherwise very good experience.

Hello Jackie,

Your post is very comforting (i.e. Suggesting that there is nothing wrong with my radio), and it also gave me an idea.

I will try another AC-DC Adapter, and I'll also try turning off the building's MAIN electrical switch. (i.e. That'll make for an electrically-quiet area)

I also hope for both our sakes, a knowledgeable SW radio group member can suggest a workaround that doesn't require us to go to such drastic extremes.

Thanks for responding.

Kindest regards,
SW Newbie,

Try listening to a SW station which is playing music with a lot of deep fading. Notice how the audio (music) becomes distorted when the signal fades, indicated by a large drop in the signal strength meter. Now turn on the sync' detector. You'll see that the music still sounds clear (undistorted) during the fading.

For those interested in ordering from a top-notch, quick-shipping outfit that offers ham radio and scanner gear, the fastest and best customer service I've ever had is through gigaparts.com. I'm not affiliated with them in any way; I am just a satisfied customer, and I believe in giving credit where it's due. They bend over backwards to securely pack your order, ship it quickly, and any questions you may have are answered in a timely and friendly manner.

Along with ham radio equipment, they offer a number of handheld scanners/receivers from Icom and Alinco, as well as the Yaesu VR-5000 and the Icom R75. Their stock of scanners is not as wide-ranging as Universal's, but I can attest to their service.

South Africa, huh? I couldn't figure out the footnotes at the schedule I was looking at, an old EiBi one I think.

Years ago, on my first SWR, a multiband affair that I bought at a yard sale for 75 cents (note gratuituous reference to buying radios cheap, for the benefit of Cuhu), I used to love to snoop around the vicinity of 5 MHz on winter afternoons just suc as today's. I used to get regularly a station called Africa No. that played calypso. It was so much fun to listen to that while snow was on the ground. I'd look outside and see the typically beautiful winter sunset.

Later at night I could hear a commercial SW station in Capetown. I remember the ads for John Player cigarettes and Yamaha motorcycles. What was their name, Radio 7, maybe?

I miss analog tuning so much. My radios are better now, but I think digital tuning takes away a lot of the endearment.

Thanks for writing.

I'll try shutting down a couple computers.

I can receive AM and FM quite well, some NYC and Ohio AM stations have come in just fine.

I did try the 5, 10 and 15 Mhz after reading that those were major freq's. WhenI get back I'll try them again as well as switching the modes around again - I know I tried several modes, had the red light come on telling me I was in SSB, nada, the ext antenna is the one that came with the radio, it winds up in a small disc -- I streched it out across the beams in my ceiling, tried with and without the ext. antenna...I do hear static, and it almost sounds like I can faintly hear a station but it stays the same as I scroll up / down, I've tried the 1 khz step too...I see the green light come on indicating it's spotted a signal but nothing...tried the fine tune too

What will I hear on the WWV 5,10, 15 - is that the time stations reserved by gov't I read about?

thnaks for the help - I'll try again Thursday night

Gotcha! It's a shame that a lot of this crap ends up contaminating water supplies.

Right on the money! Though it is strange that the Commies should name
one of their highest yielding nukes "Tsar".

Maybe I should not have commented on the digital mode since it has been years that I have used a decoder on short wave but what I recommended is what I recall working best for me most of the time. I was using an R8 with a decoder and looking at the R8B manual the AGC spec is:
Mode Attack release
Slow 1 ms 2 sec
Fast 1 ms 300 ms

Assuming the R8 and R8B AGC specs are the same the Fast AGC was the right choice for most situations.

Although the R8 and R8B have a filter for RTTY I also used the CW filter for the small shift 450Hz signals. Then there were some modes where I had to use the LSB filter so 500Hz, 1.8 KHz and 2.3 KHz. Generally you used the smallest filter for the shift you were trying to get as the smaller filter lowers the noise floor.

I have no experience with DRM other than the noise it generates on the bands but since it is a digital mode I would think Fast AGC would the best choice. If your radio is programmable then I would set the fastest settings for attack, hang and release. Here you don't actually care what the received digital signal sounds like and you want the AGC on to prevent an kind of overloading together with as rapid response as possible to signal increases or decreases. This would be the best case for getting the most bits in the stream on a continuous basis. The sound you do care about is after the digital processing and then conversion to audio. One problem DRM has on the receiver end is the high noise floor due to the very wide bandwidth needed. This is yet another maddening tradeoff when one looks at the entire system of transmitter, ionosphere and receiver. Increased intermodulation products, high noise floor and probably other things I have not thought about.

I generally stay away from turning the AGC off. The only reason to do that is if the signal you are trying to get is very weak and noise is desensitizing the radio though the AGC action.

It all depends on how you look at things. We have the larger economy
but it is the most developed. Generally the largest growth can occur in
an underdeveloped economy. A general concern of mine is that the
majority of US investment dollars is going to finance foreign
development. US investment is flowing out of the country at a rate 3.5
times the concurrent US reinvestment due to the higher rates of return.
Just imagine what things would be like if all that money was being
invested in the USA! Be sure not to tell the glass is half empty guy
about this as we will never hear the end of it.

Noise on FM is kind of strange due to the capture ratio of the radio,
i.e. it should be reject noise. I'd expect the noise source to be very
close. FM radios aren't hard to find. Try a second radio in the same
location and see if you get the same noise.

Ground masses heat quickly and cool quickly and bodies of water heat and cool down more slowly. So
the environment surrounding any ground mass sufficiently removed from influencing bodies of water
should cool down considerably. That they don't cool down more than expected is due to retention of
heat by the atmosphere.

If you have an ice cube that is in an environment slightly above freezing and one that well below
its freezing point, the 1.2 degree C energy input will help the ice cube melt. The one well below
freezing will still stay solid. And that assumes that pressure is the same for both. Look at a phase
transition diagram for water and you will see what I mean.

Yep and Krakatoa had some pretty impressive effects on the globe given the amount of material that
got tossed into the atmosphere. And this includes my point about the average global decrease in
temperature after the explosion.

I am saying that CO2 lets in high energy wavelengths (things like UV/VIS energy) but keeps in lower
energy radiation (infrared). There's nothing contradictory about it. Molecules absorb differing
wavelengths of energy and let some others through and that pretty much is the basis for molecular
spectroscopies.

I'll re-calculate using this range.

>

I have to admit to being lazy and not wanting to hunt 60+ yrs worth of CFC production ;-).
I did see
if I could get a summary but couldn't find anything.

Understood. And that's where my 85% photolytic destruction of CFC's comes into play.

>

>

> If the sun didn't continuously make huge quantities of ozone, we'd be doomed
> because the CFCs would take out all the ozone.

The toughest part of this calculation is the rate at which CFC's neutralize ozone. The concentrations that you mention above relatively small and the question is how long does it take for
a molecule of CFC to make contact with a molecule of ozone? If it is a short time then the rate of
destruction will be quick. If it is a long time, and I suspect that it would be, then the rate of
destruction is slow.

> But it does make ozone
> continuously, and that's what the environazis hope we'll forget.

No doubt about that whatsoever. The question is which process prevails. If destruction outstrips
production slightly then you end up with a depleted ozone layer. The term "ozone hole" is a misnomer. It's not a hole so much as a region of decreased ozone concentration. Measurements at
Antarctica show that 60% ozone depletion leads to 150% increase in UV.

>

Key part is the "without turbulence". Nature is plenty turbulent ;-)

>
>
> "Molecular diffusion favors lighter molecules over heavier ones.

True - in a non-turbulent situation.

>
>
> Etc. Somehow the "bad" ozone from down here, that causes smog and such crap,

> then the thunderstorm winds are selective transporters of CFC molecules.

The problem with smog is that it tends to get trapped as a result of layer inversion and
doesn't go
anywhere. Ozone and nitrogen oxides don't have a chance to go anywhere. Ozone is a very
reactive
molecule and has a fairly short half-life in the presence of reactive organics. There is no
real
chance for "bad" ozone to go anywhere.

>
>
> As you say, winds aren't selective transporters. Thank you for pointing

I have read one NASA article that entry into the stratosphere is primarily through
upwellings in the
tropics. As for the keeping the CFCs up there I have read 20-200 years. The 200 yr estimate
has no
real meaning as no one has been taking CFC measurements for that long. The CLAES instrument
on the
UARS satellite has been able to measure CFCs in the stratosphere.

CO2 lets in high-energy wavelengths and keeps in lower energy infrared radiation. No
conflict at
all.

Hello Icefish,

Are you using the AC adapter ? If yes, give on try without, while running on baterries. The AC adapter can bring a LOT of noise to rhe radio, making impossible to ear anything, depending on your area, the devices on use in your building (not only your flat), etc.

For me it was like behind deaf (in fact, only having a loud BUZZ) and then being able to hear !

Charly

Hello Yerodin,

Did you check the same frenquencies with the Sony radio ? (the previous posts do not mentioned such try). If you have the whistle on the Sony too, the problem is not in the radio.

About the antenna, you can give a try to a very simple antenna :
- coax feed line maid out from a piece of TV coax
- two thin wires, one connected to the center line of the coax,
the other connected to the shield.

You extend the two wires in opposite directions and it makes a portable random dipole. Mine is about 5m fully extended, just because I had this length of wire. No computation or studies to match specific frequency or having right impedance. In buildings made of iron structure, I put it on a window with adhesive tape, or let it hanging outside, trying to keep the two wires apparts.

This greatly improved my reception on all bands. I must say I tried mainly in the lower bands in frequency (F <= 15000 kHz) since I'm mostly listening at night. MUCH BETTER than the piece of random wire.

I'm interested in your experience since I'm planning to buy this Kaito 1102 some day as a smaller travelling radio than my current Sangean 909.

Charly

Greetings! Lou had a great set of pipes! Did you happen to see him on TV a week or so ago on the program my wife and kids? I am not much on TV, but it was classic! My wife taped it and we saved the tape. He played a doctor giving a colonoscopy to the lead actor while singing Love is in the air, and using the scope as a microphone. Watch for it in reruns if you can. It was hilarious. Jon in South Carolina.

ordinary copper wire pair?

check that the devices at each end are operating correctly
and have the correct power supply etc..

maybe you need a better microphone?
possiblly one with background noise rejection.

amplify the signal before putting it into the wire
then the noise will be less significant

bandpass filter 300-3000Hz

encode the audio digitally (probably major overkill)

> professional marine application. sturdiness is more important than
> bleeding-edge performance.

keep the wires dry and waterproof all junctions...
i'd look at liquid electrical tape unless you have a superior product.

keep them away from power runs or rune them in a separate conduit from
the power

Bye.

Hi,

Have read up a bit on propagation, and the Solar Flux values.

But what i haven't been able to get a good feeling for are the numerical magnitudes, and the
meaning of:

e.g., what value of solar flux value would be considered "good," ? Higher better ?
A & K values ? Lower better ?
Why ?

How often during the day, typically, are there "meaningful" changes, or is it a weekly thing ?

etc. ?

A brief explanation of all of this would be most appreciated.

Thanks,
B.

I think your location can hear BBC from Ascension in various languages on 15105, 17810, 17830 kHz
and other frequencies at different times of the day.

Check the bc-b05.txt schedule for the BBC using those frequencies and others, look for the target to
be
in Africa.

For instance, I see BBC in French on 17885 and 21630 kHz 1800 - 1830 UTC, target WAf

Telamon.

Where do 'you' American Corporations Invest and Build for the
future of the Corporation in the Global Economy :

1. In China (Overseas) where the building a new Manufacturing Plant
will cost one half-or-less the price of one built today in the USA ?

2. In China (Overseas) where the predictable long term Labor Cost
to run the Manufacturing Plant will cost one-fifth-or-less (1/5) the
Average Hourly Wage of one operated today in the USA ?

3. In China (Overseas) where the Chinese (Overseas) Market Place
is open to you as a result of have a Plant-in-Country and having the
ability to sell back into the USA : Giving you an expanded Market
China and a Billion 'potential' customers; plus the USA with 300
Million 'potential' customers. Plus since the Cost of the Product
Manufactured in China is Lower and thus more affordable it can
Be sold competitively in the World Market; where a higher priced
USA made item would be a non-seller.

Every major industrialized nation is currently Investing in China
(Overseas) as a future for their nations and their national economies.

Should the USA stand-a-side and let the rest of the world go by ?

the reality is that the usa is moving away from a manufacturing
economy and becoming a service orientated economy ~ RHF

I'll tried just now on 15400 17830 (BBC English program). I can here it quite loud and clear with my small dipole (s-meter shows 7/9) ! Off the whip, still audible but much weaker (0 on the S-meter).

It is like transmistted from Europe... I can't believe this is so clear. I've checked in the file : no other transmission is recorded on that frequency at this time.

I got to compute the distance...

Thanks !

Charly
Still newbie, the antenna changes averything...

What sort of response do you expect out of a left leaning Canuck like zo. Someone who thinks that the lefty Pierre Trudeau is such a great guy. Thats right didn't he buddy up to the Chinese or some of those. Not to mention that some of the Canadian scum booed a contingent of US teenage hockey players recently. Nice way to welcome those Americans whether you agree or disagree with US war policy. Shows a lot of class by those Canucks. Which is a shame because a lot of Canadians who arent left wing zealots certainly aren't anti American.

Exactly tell me who pulled the Allied countries out of World War II you little weasel. I bet the Mounties really rode to the rescue when those damn Nazis took over France and threatened to take over Russia before Stalingrad. Or the fact that the French had their little white flag ready to surrender when Hitler attacked them in 1940. Who bailed out the Free French resistance. It sure wasn't the French. And who exactly bailed out the British with the Lend Lease program in the 1940s. While London was being attacked daily. Well, Ill be damned it was those nasty Americans. Plus, what country and what people invented a large amount of the good you use and take for granted today. Those damn Americans again.

So when you start your ill informed and fallacy based anti American attacks make sure you have the facts. And yes, the US rocket progams and the nuclear programs in the 40s took in a lot of defectors from Germany. Now if they were such strident Nazis then why did they defect. Or did they participate with Hitler because it was either than or being killed. So they did until they could leave.

Now irregardless of your opinion of American war policy which is sometimes flawed. If you think that they United States is this big evil monster, you are mistaken. This is and has been the greatest nation on this earth for this timer period. Of course, I suspect that you would be more comfortable in Red China or some other socialist hole. Isn't that what Canada largely is being very socialist and generally so red like a watermelon. Oh and by the way, this comes from someone who has traveled in Canada and knows a few Canucks who aren't socialists or commies. In fact, unlike you there are some pretty conservative Canadians.

Don't give me this crap about Canada being a great bastion of racial integration considering that vastly other than large cities Canada like the US is mostly white.

I read an article at www.drudgereport.com yesterday or the day
before about Geely (China) will be selling Chinese built automobiles
here in U.S.A.in 2008. www.google.com Geely Automobile Company
China

Those cars will be selling here in U.S.A.for about ten thousand
dollars,or less.

I done told y'all months and months ago that China will be selling
Chinese built cars/trucks/vans.suvs,here in U.S.A.and we will be seeing
the demise of the Automobile Industry in U.S.A.

Would your sweety pie galfriend hop on over to a U.S.A.car dealeship and
buy a built in China vehicle and save a few thousand dollars (about
forty percent or more) over buying a built in U.S.A.vehicle? You bet
your sweet bippy,she or he will!

Wouldn't the AGC action stick some quick phase shifts in the signal? That
would be readly bad news for a DRM signal. I'd think that no or a very
slow AGC would be best and let the decoder algorithms deal with the short
term variations.

BS - "Canadian scum booed a contingent of US teenage hockey players
recently. Nice way to welcome those Americans whether you agree or
disagree with US war policy. Shows a lot of class by those Canucks.
Which is a shame because a lot of Canadians who arent left wing
zealots certainly aren't anti American.

BS - Yes - Now-a-Days - AMERICAN BASHING seems to be
what is consider "Good Sport" in Canada by a small minority
of so called Can-A-Duha-ians.

Makes one wonder what things will be like for the USA and
Americans in the upcoming 2006 Winter Olympics in Torino, IT.

Thanks for responding Charly,

I did simultaneously check the same frenquencies with the Sony radio...
and there was no whistle (i.e. mosquito buzzing) noticeable from the
Sony.

I do greatly appreciate the instructions on building the "portable
random dipole", & will save what you said and try it later.

FYI, I have been researching what some radio websites call a
"broomstick antenna".

It basically consists of a length on non-conductive form (e.g.
broomstick or PVC conduit), around which a number of turns of wire are
wound.

Technical information (i.e. that made sense to me) was initially scarce
until I found this gem:

" Wound on a 3 foot length of PVC pipe, the long loopstick antenna was an experiment to try to improve AM radio reception without using a long wire or ground. It works fairly well and greatly improved reception of a weak station 130 miles away.

A longer rod antenna will probably work better if space allows. The number of turns of wire needed for the loopstick can be worked out from the single layer, air core inductance formula:

Inductance = (radius^2 * turns^2) / ((9*radius)+(10*length))

where dimensions are in inches and inductance is in microhenrys.

The inductance should be about 230 microhenrys to operate with a standard AM radio tuning capacitor (33-330 pF). The 3 foot PVC pipe is wound with approximately 500 evenly spaced turns of #24 copper wire which forms an inductor of about 170 microhenrys, but I (i.e. the author) ended up with a little more (213uH) because the winding spacing wasn't exactly even.

A secondary coil of about 50 turns is wound along the length of the pipe on top of the primary and then connected to 4 turns of wire wound directly around the radio. The
windings around the radio are orientated so that the radio's internal antenna rod passes through the external windings.

A better method of coupling would be to wind a few turns directly around the internal rod antenna inside the radio itself, but you would have to open the radio to do that. In operation, the antenna should be horizontal to the ground and at right angles to the direction of the radio station of interest.

Tune the radio to a weak station so you can hear a definite amount of noise, and then tune the antenna capacitor and rotate the antenna for the best response."

Quoted from Mr. Bill Bowden's web site, on which there is also a picture:

http://ourworld.compuserve.com/homepages/Bill_Bowden/page2.htm

Although I didn't see any reference to using the radio's external antenna jack, I was grateful for:

1. The entire explanation.

2. The explanation that an antenna tuner, is a a standard AM radio tuning capacitor. (he included values)

3. The diagram.

4. The formula.

For my dad's radio, I plan on combining this information with data from these two websites:

http://www.hard-core-dx.com/nordicdx/antenna/special/broom3.html

http://www.hard-core-dx.com/nordicdx/antenna/special/bromstik.html

I will build one for myself, whenever I figure out what's the fix for
my KAITO 1102.

Kindest regards,
SW Newbie
Yerodin P.

Hello miso@sushi.comi,

Thanks for writing in.

I am unsure of what more competent SW radio fans call "noise".

A "whistle, that sounds like a mosquito buzzing in my ear" is something
I can relate to.

What does noise sound like?

Kindest regards,
SW Newbie
Yerodin P.

Did Sieg Heil HITLER Arnold Alois Schwarzenegger ever Join the Military of whatever Country or Countries? Yeah,I seem to remember Sieg Heil Hitler Arnold Alois Schwarzenegger was in the Austrian whatever and he stole a Tank and went joy riding.I was at Fort Knox and Fort Hood (HELL ON WHEELS!) and a bunch of other U.S.Military Bases,,,, more U.S.Army Tanks than y'all can shake a stick at.What would have happened to me if I had stole a Tank? Arnold driving that Harley Davidson Motorcycle and he with NO license,or whatever.NO EXCUSES FOR EXCUSES!!!! The worst part is,his kid was on the back seat.Arnold Alois Scharwenzegger is nothing but a big old Ugly Stupid Ape!

yerodin@hotmail.com wrote about technical specification of the "broomstick antenna"

Good evening Yerodin,

You see, I'm not a radio technical, and I wanted something easy but efficient.
So I tried things that where easy, without even soldering the wires, it works...
And it is soft, no PVC pipe, so I can put in my suitcase when travelling. That
was part of my spec.

I will try the "Snake-in-the-attic" antenna at home in the coming weeks... Same
: piece of wire, no balun, no soldering, "no nothing" ;-)
(see newsgroup article for the antenna design, search google, I don't have the
reference here).

Hope you will succeed,

Charly

1167. CODAR v DRM: Which do you find to be a greater annoyance?

Newsgroup: rec.radio.shortwave

An open question to any and all RRS participants: When scanning the bands on SW, which do you find to be the greater annoyance: CODAR or DRM?

As one who enjoys tropical band DXing, I'd say CODAR is the worse of the two.

junius

Depends of course on where one is listening. They are both equally annoying, and both = QRM.

Design and make one for your favorite Shortwave Listening Bands
Simply a Quarter Wave Length (1/4 WL) per side Dipole Antenna
using 300 Ohm Twin Lead and factoring in the Velocity Factor (VF).

Shortwave Band and 1/4 WL Feet
120 Meter = 97.5 Feet * VF
90 Meters = 70.9 Feet * VF
75 Meters = 59.2 Feet * VF
60 Meters = 47.7 Feet * VF
49 Meters = 38.5 Feet * VF
41 Meters = 31.8 Feet * VF
31 Meters = 24.5 Feet * VF
25 Meters = 19.7 Feet * VF
22 Meters = 17.1 Feet * VF
19 Meters = 15.1 Feet * VF
16 Meters = 13.2 Feet * VF
13 Meters = 10.8 Feet * VF
11 Meters = 9.1 Feet * VF

Well, if you're referring to fallout, there's the story about the
college in upstate New York that was setting up and trying to calibrate
their Geiger counters for a Physics 101 class. They couldn't get them
calibrated...it turns out a cloud of fallout from a Nevada aerial test a
couple of days before was dumping on them and that's what they were reading.

Yes... to some extent. The ATS909 is extremely sensitive and prone to RF interference. A few meters from the computer isn't all that far away. Also newer laptops primarily cased in plastic are not well shielded to begin with.

1180. Communist China Applies For TV Broadcasting License In Canada

Newsgroup: rec.radio.shortwave
Date: 2006-01-10 23:39:52 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11s8hev52o80d5b@corp.supernews.com>
Source record: 57829

and Chinese Canadians are not happy about it

Victoria, 10 January 2006 - In an attempt to export Communist China's ideology to the Chinese people and the western world, 9 Chinese TV services have applied to CRTC/Canadian Radio-Television and Telecommunications Commission for their license. According to the US Congressional Executive Commission on China, Shi Feng, a senior Censorship Agency official, states that the Chinese authorities must "consolidate the Party's propaganda" to ensure continued Party supervision of public opinion. Reporters Without Borders has called China's largest news agency, Xinhua, "the world's biggest propaganda agency."

It is clear that these 9 Chinese TV services will do a great disservice to the Canadian people by broadcasting mostly 'biased and fabricated' news reports as in the past—a mere extension of the CCP's hate propaganda machine. This is not welcome and must be stopped. Last year Phoenix TV's application to CRTC was turned down thanks to everyone's great support. Let's not forget that Phoenix North American Chinese Channel (PNACC) got involved in espionage and was arrested for stealing military secrets last November. One more reason to discredit those Communist Chinese TV services.

Let's keep it up by writing to CRTC (Fax: 819-994-0218) and copy CCTA (Fax: 613-232-2137) to oppose the application by the 9 Chinese TV services for inclusion in the CRTC's list of eligible satellite services for distribution on a digital basis.

Or send you comments here.

1182. All India Radio 9705kHz @ 2245Z

Newsgroup: rec.radio.shortwave
Date: 2006-01-11 00:10:05 UTC
From: SeeingEyeDog <lookin@u.org>
Message-ID: <11s8j7imao8vac7@corp.supernews.com>
Source record: 57831

Mon., Jan 9th
Heard on 9705 kHz @ 2245 UTC at sign-on
with male announcer in english with intro talk then into Indian music.

Passport indicates beam towards E. & SE Asia with 250KW.

Radio: Sony SW100 w/AN-LP1 active loop located in US upper-Midwest.

1183. Weird sounds around 6945 khz

Newsgroup: rec.radio.shortwave
Date: 2006-01-11 00:13:53 UTC

I'm hearing it here in SE Minnesota, about S-2, at 6:25 pm CST... it's definitely not Morse. If it's a data signal, then I have no idea what type it might be as it does not resemble any I've heard before.

> e.g., what value of solar flux value would be considered "good," ? Higher
> better ?
> A & K values ? Lower better ?
> Why ?

For A and K values, the lower the number, the better. The values typically vary with the strength of geomagnetic activity on the Sun's surface.

Generally, propagation conditions are best when the A index is 15 or lower, and the K index is 3 or lower.

Besides causing auroral activity, high geomagnetic field conditions can affect the electrons in the ionosphere, reducing the maximum usable frequency (MUF).

Hope that helps?

Jackie

Well, seems to me that if they wanted to protect women against violence, they would allow women to use " pen names " much as a novelist would do. Since I know several women who have been harrassed via internet, phone and in person by people whom they have encountered on line - I would think that BIG BROTHER would have figured out by now that letting individuals use " pen names " would do more to protect the innocent than help the guilty. Just a thought: what will this do to the on - line dating and on - line gambling biz??

If CO2 lets in solar infrared (which is largely radiant heat) and doesn't
let it back out, then it's perfect for making solar power collectors.

> Antarctica show that 60% ozone depletion leads to 150% increase in UV.

Now hold that thought.

Now remember that everything below 80 km is mixed well, so even if every
CFC that ever existed still exists, we couldn't get the whole thing to
hit the ozone layer at once. Given the sun's prolific production of O3
and the slow destruction of it, ending at 100K hits per CFC molecule,
there's no way we caused the ozone hole.

>> Some of my bookmarks have died since I last did this exercise, and I can't
>> find a source on the daily amount of solar ozone production.
>
> I can't find a source on ozone production either.

I had one, but it's not among the remaining working bookmarks I have for
ozone layer. Basically it said the sun produces O3 a little faster than
it destroys it with UV, the equilibrium provided by cosmic rays and such.

>> As you say, winds aren't selective transporters. Thank you for pointing

estimate has no
> real meaning as no one has been taking CFC measurements for that long. The CLAES
instrument on the
> UARS satellite has been able to measure CFCs in the stratosphere.

NASA still can't measure the temperature on the ground from a satellite
after over 25 years of trying. They themselves being the source of my
100,000 molecule figure, it appears they changed their story to get 200
years. Either that, or each CFC molecule only comes in contact with about
500 O3 molecules per year, in which case we're not destroying it nearly
as fast as the sun is making it.

>> Either CO2 does let heat in but not out, or it doesn't. Pick one and stick
>> with it.
>
> CO2 lets in high-energy wavelengths and keeps in lower energy infrared radiation. No
conflict at
> all.

The low frequencies, the infrared, are the ones we need to do solar heating.
Put a layer of CO2 over a big tank of water; solar infrared goes in, heating
the water, and the heat can't get back out.

>> Now, if you're really interested in seeing what affects the ozone "layer",
>> see <http://www.nature.com/news/2005/050228/pf/050228-12_pf.html>.
>
> Interesting article! Thank you!

One day, when NASA has played the CFC game long enough and can't drain any
more money out of the government with it, they'll release that information
to try to get the money flowing again.

"Tsar" translates to "TZAR; TSAR; CZAR; KING; MONARCH", according to
Rustran.com. I suspect they meant to name it "king of all bombs".

Or maybe they longed for a kinder, gentler day...

Actually we (retired and Ex ATT,Bell,SBC and now ATT again) used to do a frequency run test with an audio signal generator and a receive measuring device at the far end. If needed we would put in a equalizing unit (Wescom, Teltrend, etc) that we could adjust the 300-to 3khz slope (sometimes up to 8khz for audio program loops for radio broadcast) with to make all frequencies as flat as possible or boost the level of the freqs as needed. You can get even more technical in the time delay at different frequencies on the same copper path traveling from one end to the other. Lets see what this stirs up.

Digitizing it, then running it on a network would give you the best
voice quality, and the network can be used for other data
(environmental, remote control, alarms, ect) plus it would be relatively
simple to set up..

Hello minnesotanorskie@cableone.net ,

When asking for assistance (i.e. in an area in which I know I am ignorant), I generally try not to assume I know what folks more knowledgeable than myself mean when they use technical terms.

I could guess that miso@sushi.com, meant the hissing sound that accompanies poor signal reception..... however, that would mean that he didn't understand my original post .

It is unlikely that a hiss and a high-pitched whistle (i.e. mosquito buzzing), sound the same.

In my experience, humility & openness is more likely to get rendered assistance than other behaviours.

Kindest regards,
SW Newbie
Yerodin P.

never said you did

but you calims no limits on yourself therforeno limits apply to me on
the number of post I make

get it through your head I have the same right you do.

I not limited to 10 post becuase you only made 10

If i need 50 to make my point then I will make fifty as is my right

My comment was for the FM noise. I guess I should have explained "capture ratio." With FM, the radio can reject an interfering signal as long as the desired signal is sufficiently stronger. So for you to get noise on FM, the noise source has to be very close, or the desired signal is very weak. I say this only because you have eliminated power line (mains) noise by going to battery operation. It would make sense to try the radio that you suspect has a problem in another location to see if the noise goes away.

Noise on shortwave is another story. There is no ability to reject noise with an AM radio. Rather, on AM, the noise gets demodulated with the desired signal. There isn't much you can do other than to locate the noise source and eliminate it. There are some solutions, such as going to a loop antenna, which tends to not pick up some types of noise, or use a noise canceller like the ANC-4. But there is nothing like finding the noise source and eliminating it.

I have no idea what it is like where you live. In urban areas, noise is everywhere. My house has it's share of devices that make noise on shortwave and even AM BCB. I have a laser printer that pumps out 847kHz. Battery chargers with switching supplies are another noise source. Computer monitors, especially CRT types make noise. Dirty insulators on power lines. The list is endless.

1211. deceptive auction title on ebay

Newsgroup: rec.radio.shortwave
Date: 2006-01-11 08:14:37 UTC
From: weatherall <weatherall.21gqvh@news.radiobanter.com>
Message-ID: <weatherall.21gqvh@news.radiobanter.com>
Source record: 57760

Right now on eBay, a seller lists two different auctions for "Eton E310" radios. I've never heard of this radio so I read the auctions. Do you think this seller intentionally put the wrong product name (it's actually the Eton E10 as can be clearly seen in the photos) to get more people viewing the auction? It's not a typo because it was done for two auctions and E310 is used in the auction description as well as the title.

check it out 90+ pages, I got dizzy looking at the math in this

1213. Measuring filter shape factor

Newsgroup: rec.radio.shortwave
Date: 2006-01-11 11:05:01 UTC
From: nospam@nospam.com
Message-ID: <43c4e407.4277000@news-server>
Source record: 57762

Amongst all these political propaganda posts, I wonder if there is a little room for a technical question related to radio please?

If so, here goes:

How does one measure the IF filter shape factor in a shortwave radio?

I am technically minded and do have a signal generator, etc., but I am not sure of the exact procedure. Do I get the audio level at the peak frequency, then detune both sides off the peak for -3dB of the demodulated audio, note down the width between these points, then detune to obtain for -50dB of the demodulated audio, get the width at these points, and then the ratio of the two widths is the filter shape factor?

I would appreciate a link to the exact procedure if there is one (don't seem to be able to find this in Google) or an expert advice please.

I would also appreciate advice as to what actual values of filter shape are considered poor, good, excellent, etc...

Thanks in advance,
Michael

I live in a concrete-and-steel highrise building. Various SW websites advise that I could make an antenna made of "a few yards" of simple insulated copper wire and hang it out of the window to improve reception.

I've made one accordingly. The portion outside the window measures 3 yards in length and is pointing vertically down alongside the outer wall of the building. Reception improves a bit but I'm still not getting the stations I should be getting.

Could any SWers please let me know if:
1. my wire antenna is of the correct length; and
2. letting the wire antenna pointing vertically down alongside the outer wall of the building is correct.

1215. From OP: SF Number ? Re: Solar Flux Values: Interpreting Of ?

Hi,

Thanks for info and links.

What about the SF numnber ?
What's a good value ? Higher the better ?

Bob

You're apt to get better results if you extend the wire out away from the building, so that it's no longer inside the building's "noise envelope". Perhaps you can dangle the wire off the far end of a fishing pole?

If you're not too far from the roof of your building, it might be worth asking whether you can locate a wire antenna up there. Find a couple of ventilation pipes extending 10-12 ft above the roof, spaced 100 ft or more apart and you'll be in good shape. Then just run a coax feedling from the antenna to your receiver.

Thanks for making my point. Humidity doesn't help the areas around Phoenix;
there's not always a cloud cover; but the ground absorbs and holds (and
slowly releases) a whole buttload of heat.

If you rely on radio to identify oncoming threat, try the following. It looks like a reasonable alternative.

http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5853322693&rd=1&sspagename=STRK%3AMESE%3AIT&rd=1

I suppose I could throw that junky radio at somebody, but for $20 I
could get a better weapon than a radio without a digital display.

Hi Michael,

Although I have never given it much thought, I don't believe one can fully characterize a filter while it is installed in the receiver- certainly, parameters such as insertion loss would not be easily measurable. Perhaps programs like Spectran may give some rough insight.
My method is classic- the filter is removed, properly terminated and connected as the DUT on a scalar network analyzer.
If you have a vector network analyzer available you could also observe group delay- an important factor in narrow filters.
See Paul Kiciak's (N2PK) site for his clever VNA- ideally suited for filters.

http://www.lazygranch.com/images/radio/cwfilter.gif
I did this test as follows:
1) radio in AM
2) AGC turned off
3) RF generator connector to antenna input
4) distortion analyzer connected to earphone output

Pick a frequency. I used 10Mhz. Set the RF generator and radio to that frequency. Leave the radio dial alone. Sweep the RF generator manually and measure the audio level from the distortion analyser. Plot the results. This was a crystal filter, so you will need a RF generator with 1Hz steps.

This is an in-situ measurement, i.e. this is not the same as just testing the IF filter by itself. You need the distortion analyzer to get the audio signal level independent from the noise.

All that said, Bush should be impeached.

You need to generate a swept frequency response of the IF filter

Take a look at the following article on filter selectivity:

http://www.radio-electronics.com/info/receivers/selectivity/selectivity.php

The shape factor is traditionally defined as

BW(-60dB)
SF =---------------
BW(-6dB)

(see the third figure in the article illustrating a typical filter
response and the meaning of the two bandwidths)

For an ideal filter (see second figure), this bandwidth ratio would be
equal to ONE (1.0).
The closer the shape factor is to 1.0, the sharper the selectivity. For
example, if you look at the specs for the Eton E1 on the following link
(Monitoring Times review)

http://www.monitoringtimes.com/html/mtfirstlook-etone1xm.pdf

the shape factor for the 7 KHz filter would be:

SF = 12 KHz/7 KHz = 1.71 (not a very sharp filter, but not bad for a radio of this type)

The other two filters have even worse shape factors. With DSP receivers, these filters can be made extremely tight and shape factors can be very close to 1.0.

Hope this is helpful. Perhaps Pete can chime in with a detailed measurement procedure.

RK

Sine-wave measurements are more precise. My test is very close to real
life since it is testing the entire signal path, i.e. from antenna
input to audio output. I couldn't find the connector I made that taps
the line output, so I used the earphone output.

I have audio test gear that uses random noise with FFT analysis, in
addition to a swept sine. You always get more accurate results with a
swept sine. FFT analysis is only used when you need speed.

As you will notice from the graphical output, the noise floor is quite
high. I may do the test again BTW, you need a decent distortion
analyser for

At the time I did my test, I had a "hole" in my generators. The audio
gear went as high as 100k, and the RF gear went as low at 1Mhz, but the
IF was 455Khz. Hence I tested the whole audio path.

The impedances in the radio itself will effect the performance of the
filter, so there is something to be said for in-situ measurements.

Oh yeah, note that Abramoff didn't donate any money to the Democrats.

There are various alternatives. see some at the AMANDX site at:

http://www.angelfire.com/mb/amandx/limitant.html

There maybe something that works for you. As for length often the longer the better on a wire dropped out a window. I have used 25 feet with success. A weight on the end keeps it hanging straight down

I was hoping to get some information on this receiver if anyone can help.

Currently I have an R-1000 which is great for my needs, except for the speaker being on the top instead of front-firing. I like the fact that it's analog tuning yet has a digital frequency counter (I don't care about entering frequencies like on digital synthesized receivers). Occasionally I run it through my small stereo amp into a nice pair of bookshelf speakers and the audio is terrific with the wide 12 kHz filter (not too bad with the narrow 6 kHz, either), but mainly use it for bedside listening to shortwave.

I'd like a receiver with a front-firing speaker for my bedside, and was wondering how the '600 matched up to the '1000. I do know that it came out later, is it also anaolg tuning with the frequency counter, minus the analog display? How is the audio compared to the '1000, run through a stereo system? I'd probably swap the stock 6 kHz filter for something a bit wider to improve fidelity. How much attenuation of the signal does it give you when you use that function?

I'm not too worried about what I'd lose in dynamic range, etc. since I'd only use a modest antenna to listen to the BBC and such major broadcasters.

Thanks for any help!

You're considering downgrading from an R-1000 to an R-600 , just to get a front-firing speaker?

Michael:
If you don't have a spectrum analyzer, you can use an oscope (setup for x-y) while driving the filter (and x) with a sweep function generator. Remember that if you look at the IF output prior to the detector, you will get a curve going positive and negative. If you look at the response after the detector, it will look more like the IF filter shape that you expect.

Because I am going to plop for a new (at least 27 inch (or larger) screen RCA CRT flat screen tv set) tv set this month,hopefully.My 27 inch RCA (I prefer RCA tv sets) tv set that I bought on October 15,1999 that I use only with my Webtv set top box,that RCA tv set still works as good as new.My Goodwill store old five dollar MGA/Mitsubishi tv set that I use for watching old,old movies on DirecTV,that tv set is about to bite the dust.I can't do without my tv.Hey,do a search for,Watch Free TV on your Computer

Metinks I will check that out some more.My computer monitor is a 22 inch Multisync that I bought from www.tigerdirect.com It sits on my coffee table,I think it would look good for watching tv channels around the World.I want to pick up live streaming Ireland and Scotland tv on my computer monitor.

I own a Toshiba AM/FM/Shortwave Radio (I bought it at a Goodwill thrift store about eight or nine years ago,only a few dollars) that looks very much like that Sony,and it works too,except the signal meter does not work.Maybe that's why it showed up at the Goodwill store.A couple of days ago,I bought a nice Murray bicycle that has a three speed gearshift in the rear hub of the bicycle's rear wheel,only eight dollars for the bicycle,it's still sitting out there in my raggity old 1978 Dodge longgggg wheelbase van,crammed full of old Goodwill junk.

I'm a National Review subscriber. Really. However, I don't read the
on-line version as it is routinely disinformation, i.e. articles that
don't make it to the magazine. If you subscribe to the magazine, they
will print retractions of what appears online.

I will say at NR is the only conservative mag worth reading. They never
stooped to the level of say the Spectator.

what a fool.....in no way did I deny that the Saudi boys hijacked and
crashed the planes(except the plane that went down in PA was likely
shot out of the sky)..

What I want to know is why the thermal pics of the rubble picked up
plastic explosive type hotspots, and why the towers fell when every
engineer said the fire and the plane strikes would not have brought
them down. And we all want to know why NORAD did not act as trained
and practiced.

Address the issues scumbag.

You do your country no favors with your shallow rant without logic.

Everyone who has researched the events knows Bldg 7 was planned
demoliton and the public never told....and that the Twin Towers
apparently got an assist after being struck by the planes.

And you make no effort to explain NORAD's lack of response...give it
to us.... traitor.

1289. Radio (nor necessarily shortwave) recommendation wanted

Newsgroup: rec.radio.shortwave
Date: 2006-01-12 06:19:32 UTC
From: Joe Negron <jnegron@XmindspringX.com>
Message-ID: <Uxmxf.6436$ZA2.3937@newsread1.news.atl.earthlink.net>
Source record: 57939

I'm looking for a recommendation for a good radio, but not necessarily a shortwave.

Almost a year ago I bought a Grundig Yacht Boy YB300PE from Amazon.com while it was on sale (I also picked up a GE Superradio III, which I find very useful for picking up out-of-town baseball games). I have a Sony ICF-7600GR and didn't expect the Grundig to be any better but the price was low ($40) and I was curious to try it out, mostly because I've only ever owned Sony shortwave radios (first an ICF-SW7600, then the 7600GR).

I don't like it much. It doesn't compare favorably to the Sony in any way I can think of, and I particularly dislike the very tinny sound of the speaker. Some of the controls are counter-intuitive as well (e.g., if the unit is in sleep mode, you cannot simply press the power button to turn it off: you have to press the power button two times, once to put it in "normal" mode, again to turn it off). I was going to ditch it or try to find someone to give it to, but my wife expressed an interest in it so I gave it to her.

She likes it well enough, but she doesn't use it for shortwave. She likes the presets (i.e., the ability to easily and quickly switch among multiple stations of interest) to switch among various AM and FM stations.

I'd like to get her something better. Anyone care to offer any recommendations? The main features of interest are the presets (at least 10 or so), a decent sounding speaker, a sleep feature, and a reasonable price. By "reasonable" I mean that I don't want to spend ~$180 (or whatever is the current price) on a Sony ICF-7600GR because, as I've said, she doesn't use it for shortwave and I figure it would be overkill to buy a top-end portable shortwave mainly because it has presets.

IOW, it seems that most (all?) radios that have presets are shortwave. My wife likes having the presets but has no interest in listening to shortwave stations.

So, what I'm looking for is a radio with presets and the other features I mentioned above, that is reasonably priced, which doesn't have to be a shortwave radio.

Yes, I have a balcony (same as porch, I believe).

Last night I tied the 3 yard wire leading from the window of my room to the balcony instead of letting it dangling down. The wire is now therefore hanging horizontally outside the building although it is still close to its wall.

Things improve. I am hearing the Voice of Russia, BBC (transmitting from Thailand and Singapore) and VOA from my apartment home in Hong Kong.

I shall increase the length of the wire antenna and see how it goes.

Considering the fact that I live in the middle of a concrete jungle (there're many other tall buildings in my vicinity), I'm already rather pleased that I'm getting at least some SW reception at all with my US$8 made-in-China 9 band pocket radio.

Thanks all for their advice.

Just out of curiosity, do you guys think that the Sony active antenna, placed near the window, will work better than the home made wire antenna hanging outside in a concrete jungle environment?

ngu,

Since you live in Hong-Kong, I suggest you to get a Degen DE-31/Kaito KA-31 active antenna. It is another portable active loop, much cheaper than the Sony. It is said to have lower performance than the Sony but to be a good bargain due do its low price (< 20 US$).

You can see a review here (with Sony comp.) :
http://www.radiointel.com/review-degende31.htm

I have purchased one, but I don't have yet... A few days more to wait until it ships to me !!

So far I've been using a home made wire dipole. Assuming your radio has a external antenna jack connector or the like, you can give it a try. I've posted the recipe a few days ago but I can repost here.

You need :
- coax feed line maid out from a piece of TV coax
- two thin wires, one connected to the center line of the coax,
the other connected to the shield.
- a suitable connector to your radio (1/8" mono jack for my Sangean)
connect center wire to connector tip, coax shield to the connector ring

You extend the two wires in opposite directions and it makes a portable random dipole. Mine is about 5m fully extended, just because I had this length of wire. No computation or studies to match specific frequency or having right impedance. In buildings made of iron structure, I put it on a window with adhesive tape, or let it hanging outside, trying to keep the two wires apparts.

This greatly improved my reception on all bands. I must say I tried mainly in the lower bands in frequency (F <= 15000 kHz) since I'm mostly listening at night. MUCH BETTER than the piece of random wire I tried in the same conditions.

Hope this helps,

Charly

Thanks, Dale, for your input. I would have no problems measuring filters when taken out of a receiver. But this is not always possible, for example with modern DSP software-defined receivers. There you have no choice, the filter is no longer just a component you can desolder, so you do need to measure the entire receiver. Parameters such as insertion loss is immaterial in such cases - all that matters is the filter shape.

Many thanks, this is interesting. What I am still unsure about is how
you determine the -6dB and -60dB points using the distortion analyzer:
When you say "measure the audio level", what exactly do you measure,
the audio signal fundamental (i.e. filtered at the modulation
frequency)?

So in fact you are only using the distortion analyzer to filter the
audio and to measure the level? I don't have a distortion analyzer,
but I guess I could simply use an oscilloscope or an audio spectrum
analyzer (PC sound card based).

1297. Coax Vinyl Covering Question

Newsgroup: rec.radio.shortwave
Date: 2006-01-12 13:08:06 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <7fCdnZ5kV50tyVveRVn-oA@comcast.com>
Source record: 57947

Hello:

Trying to figure out how to run some coax from a Balun which will be near a ground rod up to my second floor receiver.
For receiving only.

Lots of possibilities; some much more involved than others.

Was wondering if one can consider the vinyl coating on coax these days as being water and snow "proof" ?

Or, it would be a bad assumption, and I better go with some buried emt type of plastic rod buried a foot or so in the ground rather than just laying the coax across some garden beds on the surface, etc. ?

BTW: As this is a listening only application, just how bad would it be actually if, e.g., the coax does develop a tear and the shield beomes earthed at that spot.

Would I even notice it ?

Thoughts on ?

Thanks,
Bob

Joe ...

I wasn't clear from your post if you are strictly looking for a
portable radio or not. If so, you can ignore the following.
The best radio I've found in terms of presets, performance, styling and
user friendliness for the casual user is the Boston Acoustics Recpetor
model. It goes for about $150, which is under your $180 limit. It is
not portable, however, and covers only the US AM broadcast and FM
bands, which is what your wife may be after. I'm a radio geek and
enjoy my R75 and ham receivers immensely, but still find myself using
this one for most all of my casual listening. It has great mono audio
and wonderful preset programming by means of a rotary dial. You can
set both AM and FM presets on this dial and smoothly and easily move
between them. Good sensitivity and selectivity. Very comprehensive
alarm and clock features as well. Comes in a choice of two (or maybe
three) colors and is very nicely styled in my opinion. Only thing that
is missing in the design is a connector for an earphone, so keep that
in mind if it is an important consideration for you.

Their Armageddonites,
and Ours
Iran's president and Pat Robertson more alike than you think
by Jon Basil Utley
Pat Robertson and 20 million American fundamentalists are not alone.

The new president of Iran also believes that the end of the world is nigh and "believers" can help speed it up. His government has now allocated millions of dollars for the Jamkaran mosque to help believers prepare for the event. It is staffed by the Bright Future Institute, which fields inquiries and prepares Iranians for the end of this world and eternal life in the next. Among Muslims, especially Shias, much attention is given to this coming battle between good and evil: some 20 percent of the population in Iran is reported to believe in an Armageddon-type scenario ï¿½ except the roles are reversed, with America representing evil. The ascetic President Mahmoud Ahmadinejad lives so modestly that his only declared assets include a 30-year-old car and a small house, and no money in a bank account.

Muslims also believe in Jesus Christ, called Issa or the Maseeh (Messiah), and the Second Coming. It is indeed a foreboding confluence of interests. For our American Armageddonites, the major belief is that the founding of Israel and the return of most Jews to the Holy Land is a precondition for the end of the world, when all the billions of human beings who are not "born again," including Jews who don't convert, will be killed. Born-again Christians (and children under 12 who are innocent of sexual sins) will be "Raptured" to heaven to live happily ever after. (Incidentally, though Muslim and Christian fundamentalists are both known for their sexual puritanism, Muslims dream of a heaven with sex, while evangelicals long for a heaven without it.) Many evangelicals are trying to hurry up the process by collecting millions in their churches to subsidize settlements on the West Bank and to pay for more Russian Jews to go to Israel.

For Shi'ite Muslims, their "victory" will bring a new world order of eternal justice and peace, and the triumph of the Shi'ite order, which will last for a millennium. The apparently hopeless military weakness of the Muslims compared to America is waved aside thusly:

"If we delve in the history of mankind it becomes apparent that Allah's wars are always an exercise in inequality. The forces of evil are always mighty and strong. The truth is represented by the frail and weak, who appear inconsequential in the eyes of the enemy. Hazrat Musa (Moses) and Pharaoh, Hazrat Daud (David) and Jalut (Goliath), Hazrat Issa (Jesus) with his bare feet and patched clothes and

countless other are a testimony to this Sunnah of Allah. Today we are again fighting Allah's war. The bells have started to toll signaling the count down [sic] to the bloodiest battles ever witnessed by mankind ï¿½ the Armageddon ï¿½ prophesized [sic] in the Bible and Torah as well. The mightiest nation on earth is pitted against the weakest ï¿½ a most glaring mismatch. For the Muslims it is a time for intense prayers and supplications to the Almighty Lord to forgive us our sins and to bless us with the presence of Hazrat Imam Mahdi, so that the events leading to the annihilation of the evil empire may start to unfold."

One could say that they take the long view of "victory," but this strategy is well recognized by experts in Fourth Generation Warfare. Their kind of certitude leaves little room for compromise, and it complements the attitude of American fundamentalists, who also see the war as one between good and evil, as enunciated by President Bush. The born-again Bush has not openly confessed his views on end-times prophecy, but many of his speeches use Armageddon terminology. Other Armageddonites, such as Tom DeLay, also have strong influence in the U.S. government.

An interesting chart describes the major similarities and differences in the eschatological prophecies of Islam, Judaism, and Christianity. The Christian and Muslim preconditions are fairly general, for example, bloodshed and war, celestial and volcanic disturbances, decrease in religious knowledge, while the Jewish are more precise and worldly. A major sign for Muslims is that of defeating Jews in battle, which seems hardly imminent.

Both fundamentalist Christians and Muslims believe that in Heaven each man (and woman) regains the prime of life with an age of 33, the age of Christ when he died. For born-again Christians, the Rapture means that they go straight to Heaven with no judgment day (nor are good works necessary), but they must be alive at the time of the Rapture. One can understand the appeal for old men like Pat Robertson to try to hurry events along. For Muslims, it is the same for those who die in battle: they too go straight to Heaven, no questions asked.

Interestingly, there is no mention in the Koran about a coming "Mahdi," just as the born again have also distorted biblical prophecies. For the great majority of Christians, their forecasts are not recognized. Professor Leonard Liggio, who teaches the history of law at George Mason University, describes how nearly all other Christians view the end-times scenarios:

"Catholics, Orthodox, Anglicans, Lutheran, Methodism, and some Calvinists do not hold to that stuff. I can speak best about Catholicism: many early Christians thought that Christ would return soon, but with the fall of the Temple in 70 A.D. to the Romans, they interpreted the sayings as referring to that happening. Catholics/Orthodox rely on the Church Fathers, who did not expect the Second Coming for a long time. The fall of Rome in 410 A.D. to the

Vandals was considered by St. Augustine maybe to be an end time, but there was no Second Coming. Some people thought the year 1000 might be an occasion. Most Christians do not hold to fundamentalism, including that Jews must return to Palestine to bring the Greatest World War or for Jesus to return."

A very interesting article by Michael Ortiz Hill points out that the ï¿½Book of Revelation in the Bible was only made scripture three centuries after the death of Christ. ï¿½ Martin Luther found the vindictive God of Revelation incompatible with the gospels and relegated it to the appendix of his German translation of the New Testament instead of the body of scripture. All the Protestant reformers except Calvin regarded apocalyptic millenialism to be heresy.ï¿½ Muslim scholars point out that Jews, Christians, and Sabians (assumed to be Zoroastrians) who believe in God and do good deeds can still get to Heaven. Fundamentalist Muslims, however, do believe that in the end times all nations will be destroyed except Muslim ones.

Historically, such views make it easy to understand how the European religious wars during the 17th century were among the bloodiest in history, and were a major reason for the secular structure established by America's founding fathers. Compromise means betraying God, or, as one born-again cleric put it, Christ said to forgive one's enemies, but he didn't say not to kill God's enemies. Armageddonites of all religions want to escape from this world and, indeed, expedite the end for everyone else.

It is indeed an irony that today, at the beginning of the 21st century, America, Iran, and Israel all have governments heavily influenced by fanatical religious fundamentalists. The rest of the world should be aware and wary.

I'd get an MFJ-1024 or a Dymek Active, clamp it to the railing.

You can get the MFJ on a no questions asked trial basis.

Try http://www.ccrane.com/

They have a whole slew of better AM-FM radios with presets and other abilities. Not necessarily cheap, but they have a good selection.

Robert11 asked:
> Was wondering if one can consider the vinyl
> coating on coax these days as being water and snow "proof" ?

It's good for a couple of years.

It depends on the environment, but in many cases sun and ozone can do a lot more damage to the cable than snow and rain will. (You talk about snow, so you're not in Southern California, but sun and ozone did awful things to plastic and rubber material there, rarely lasting more than a year or two.)

> Or, it would be a bad assumption, and I
> better go with some buried emt type
> of plastic rod buried a foot or so in the ground rather
> than just laying the coax across some
> garden beds on the surface, etc. ?

If you're going to bury it, go deep, deep enough that whatever gardening tools you use won't get to it. A roto-tiller or lawnmower will pretty much just cut through metal EMT (making a lot of noise etc., not good for the blade or crankshaft either!), you probably won't even notice the plastic stuff if you hit it.

Tim.

I have an MFJ-1024 that's been running continuously since early 1999.

If you buy through a dealer they will honor the return policy.

Hi Ngu..

Suggest trying to get more wire outside the building..
even a few feet away willl help reduce noise and impriove signal
reception..

ONE suggestion is to make a co-ax lead in from your outside wire to the

shortwave radio

- and arent little cheap radios Fun ??

AT $25,000.00

http://www.courttv.com/news/2006/0112/chatroom_suit_ctv.html

By J.K. Dineen
Court TV
Mike Marlowe fully admits that he sometimes gave George Gillespie a hard time in that AOL chatroom.

But never in his wildest imagination did he expect to be sued in court for what he characterized as "razzing."

"We gave him crap," said Marlowe, a 33-year-old welder in Fayette, Ala. "I'm not going to deny it. I teased him and he teased me back. He gave it back better than he ever got it."

A generation ago, such petty personal beefs might have been settled with fists outside the corner bar, but now it's the Internet age - and Ohio resident George Gillespie instead filed a $25,000 lawsuit against two erstwhile cyber chums he met in the sprawling 900-room, mostly anonymous society that makes up AOL's chat universe.

Gillespie, 53, claims that Marlowe and Bob Charpentier, a 52-year-old Oregon resident, insulted him and harassed him in the AOL chatroom called "Romance - Older Men" to the point where it inflicted "severe emotional distress and physical injury that is of a nature no reasonable man could be expected to endure it."

The complaint, expected in court on Jan. 31 for a pretrial conference, also names AOL as a defendant for allowing the alleged harassment to take place.

Gillespie alleges that the duo intruded into his "private affairs." The complaint states that Marlowe actually drove from Alabama to Ohio to photograph the plaintiff's home, which he then posted on the Web. He also allegedly went to the courthouse in Medina to dig up personal dirt on Gillespie, which he then also disseminated over the Internet.

The case is not simply "someone conversing in a chatroom" but also involves "harassing someone in Ohio," which gives Ohio courts jurisdiction, according to Gillespie's lawyers.

"Had the defendants stayed in the chatrooms, there would be no jurisdiction here, case closed" Gillespie's attorney Theodore Lesiak stated in the complaint. "Defendant did not."

But Marlowe said he works 60 hours a week at an autobody shop and laughed at the notion that he would drive from Alabama to Ohio to take pictures of Gillespie's house.

"I have never been to Ohio and I have absolutely no desire to go to Ohio," Marlowe said. "There is nothing there - the Cincinnati Bengals are there, the Rock and Roll Hall of Fame maybe, and that's about it."

Even if Marlowe did take a trip to Ohio, posting a picture of someone's house on the Internet does not violate privacy laws, according to Chris Hoofnagle, attorney with the Electronic Privacy Information Center.

"Those norms require the aggressor to engage in behavior that is highly offensive to a reasonable person," he said. "Taking a picture of somebody's house and putting it up on the Web is not that."

Hoofnagle said Gillespie's emotional distress claim will also be tough to prove.

"We live in a rough society, as compared to Europe, where offending someone or directly cursing or attacking their dignity can give you a cause of action," he said.

Power Struggle in 'Romance - Older Men'

Charpentier said he first encountered Gillespie more than five years ago and at first, the two chatters were friendly. But Charpentier says he quickly became disenchanted by what he saw as Gillespie's mean streak.

Things really turned ugly four years ago when Charpentier traveled to Kentucky to meet another chatroom regular, a woman who was also a friend of Gillespie's. The blind date did not go particularly well, and when Charpentier returned to he discovered that Gillespie had gone on the attack.

"He just came in slamming on me, saying all kinds of derogatory crap: that I was a fat, bald, broke old man who sits around in a rusted wheelchair," said Charpentier, who has a chronic back injury. "I don't even own a wheelchair."

Charpentier, who has filed a response seeking to reserve the right to file a $125,000 countersuit against Gillespie, said Gillespie threatened to kill him and "made sick and disgusting remarks about the passing of my grandmother."

"He is an AOL computer thug, that is all he is," Charpentier said.

Marlowe characterized the dispute as a petty power struggle. He said Gillespie was the de facto leader of the "Romance - Older Men" chatroom, and didn't like it when he and Charpentier challenged his

authority.

But Marlowe said he never took the chatroom antics personally - until he was served with a lawsuit.

"I don't know how four years of bantering back and forth led to this insane nonsense," he said. "It's just the Internet, for God's sake. It's nothing important."

Michael Gordon, an attorney for AOL, declined to comment, saying, "This is just the beginning stages of this thing."

Megan Gray, a Washington D.C.-based intellectual property attorney who specializes in cyber issues, called it "a loser of a case." She said the Communications Decency Act gives AOL immunity from chatroom misconduct.

"AOL cannot be held liable for the actions of people on the site," she said.

She also suggested the case against Marlowe and Charpentier was doomed.

"The Internet is such a vibrant, young medium, these types of cases are not taken seriously," she said.

There's an external speaker jack on the back panel, next to the coax
connector. If you want a front facing speaker, use a seperate one
there. Or, since the internal amp is not the greatest, IMHO, plug
a nice set of amplified "computer speakers" into the remote jack
on the front panel.

The R-1000 is amazingly convoluted inside (too old for a microprocessor),
and the R-600 may be cleaner. (You should be able to get the manuals
on the mods.dk web site). But the R-600 came out about the time the
yen increased in value, so I've only seen one of them.

Source record: 57980

DX-Ass is so busy running his new business (he likes to play dress-up and works as a transvestite prostitute in some of the back alleys around
Holland, from what I understand). He offers "bareback service," which basically means that, for a higher fee, you don't have to use a condom.

For this, DX-Ass should go away from RRS. He's obviously too busy to maintain his witty banter, and he likes a pole in the hole, so it only makes sense.

DX-Ass, grow your business. You don't need us anymore, you're going to be wealthy! You can move out of that shed you're living in, and move
up to a nice mobile home.

Good luck, DX-Ass!

1332. Hey, DX-Ass, Wanna Smoke?

Newsgroup: rec.radio.shortwave

Source record: 57981

DX-Ass,

I understand you're a smoker. Wanta smoke? There must be a gay bar
or two in Holland...
Maybe you could go down there and smoke someone's bone?

I understand smokers are very oral and they like having something in
their mouths all of the
time. DX-Ass loves bone-smoking (playing the skin flute), so he's a
perfect match for any of
the gay bars in the Holland area.

1333. DX-Ass Smokes His Own Sausage!

When Lloyd Davies gets a settlement under this ruling, then maybe
Steve Lare might have reason for concern.

Then again, an AOL Chatroom is a far cry from an unmoderated
Newsgroup, where a flame war is a long standing and well established
tradition.

Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
44 reasons come to mind
Why you muthafuckin' brothas hard to find.
He be walkin' on the streets and fuckin' with mine.
Stupid punk can't fuck with a mastermind.
See I never take a step on a Compton block
Or LA without the AK ready to pop.
'Cause them punk muthafuckas in black and white
Ain't the only muthafuckas I gots to fight.
I think it's better to retellin' the facts than cuffed up
And jacked and fucked up.
What you niggas lookin at? You do in...
Goddamn, 'cause it's the city.
And for a youth to survive a nigga gotta be a gangster.
And I'm a nigga you can't remove.
Took out a lot of muthafuckas for tryin' to prove
To their homies they can hang by dealin' with me.
But once again in the end they D - E - A - D.
I never did time on a murder - yet.
'Cause I relax and back do a job and jet.
Yo, I know you understand my flow,
So here we go when Death Row
Come. Let a mutherfucker know...

Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!

D - R - E!
A mutherfucker who's known for carryin' gats
And kick raps that make snaps.
Adapts to anything violent that I'm located at.
If you see me on the solo moves believe that I'm strapped.
44, .38 or AK 47.
'Cause Mo' live with Charlie Sheen.
You want a stairway to heaven?
Just put my finger on the trigger and pull back -
And lay a punk mutherfucker flat.
As he wonder what popped before he got popped,
I told you I was Dre and you know it don't stop.
Now I know you understand my flow,
So here we go when Death Row
Come. Let a mutherfucker know...

Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!

I break some off. I break some off.
Yeah, I break some off. I break some off.
Yeah, I break some off.
But I ain't speakin' about between the thighs.
I'm talkin' about cockin' a guage in between your eyes.
That'll make you drop to your knees, 'cause you realise
That a gat will make any nigga civilised.
Old buster ass nigga talkin' bullshit.
Don't know that I'm the wrong nigga to fuck with.
Get lit or hit up by the doctor.
A nigga to break some off properly.
Real G.
So don't doubt it.
I'm the one who's doin' it
While these other niggas talk about it.
And if mutherfuckers come at me wrong
I straight put my 44 Desert Eagle to his muthafuckin' dome.
And show him why they call me the notorious one.
The name is Dre, E's ward when I'm packin' a gun.
You don't believe me, wants to pop and give it a try.
And if you die you's a buster 'cause real niggas don't die.
But some still don't hear me though.
You're too ninny not to hear me, yo.
So now you know...

Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun!
Who is the man with the masterplan?
A Nigga Witta muthafuckin' Gun...

There is actually some precedent on this; one person
sued another about impacting their livelihood by constantly
ripping on their credentials for teaching about
ancient Egypt. The lower court ruled in favor of the
plaintiff, but was reversed on appeal. I used to read
soc.history.ancient, and it was a big deal back in
the mid-late 90's.

It is nice to see that someone from out of state thinks
of the Bengals when they think of Ohio, for a change.
And in a good way, too.

But when the whole system is put together, it's no longer "filter
shape factor", it's some other parameter, "adjacent signal rejection"
or something like that.

Then he's stupid, or ignorant, or lying. 40 out of 45 Senate Democrats got money from Abramoff.

Senator John Kerry (D-MA) received at least $98,550 in Abramoff-linked cash.
Senator Harry Reid (D-NV) received at least $68,941 in Abramoff-linked cash.
Senator Tom Harkin (D-IA) received at least $45,750 in Abramoff-linked cash.
Senator Hillary Clinton (D-NY) received at least $12,950 in Abramoff-linked cash.
Senator Patty Murray (D-WA) received at least $78,991 in Abramoff-linked cash.
Senator Chuck Schumer (D-NY) received at least $29,550 in Abramoff-linked cash.
Senator Debbie Stabenow (D-MI) received at least $6,250 in Abramoff-linked cash.
Senator Max Baucus (D-MT) received at least $22,500 in Abramoff-linked cash.
Senator Evan Bayh (D-IN) received at least $6,500 in Abramoff-linked cash.
Senator Joseph Biden (D-DE) received at least $1,250 in Abramoff-linked cash.
Senator Jeff Bingaman (D-NM) received at least $2,000 in Abramoff-linked cash.
Senator Barbara Boxer (D-CA) received at least $20,250 in Abramoff-linked cash.
Senator Maria Cantwell (D-WA) received at least $21,765 in Abramoff-linked cash.
Senator Tom Carper (D-DE) received at least $7,500 in Abramoff-linked cash.
Senator Kent Conrad (D-ND) received at least $8,000 in Abramoff-linked cash.
Senator Jon Corzine (D-NJ) received at least $7,500 in Abramoff-linked cash.
Senator Chris Dodd (D-CT) received at least $14,792 in Abramoff-linked cash.
Senator Byron Dorgan (D-ND) received at least $79,300 in Abramoff-linked cash.
Senator Dick Durbin (D-IL) received at least $14,000 in Abramoff-linked cash.
Senator Dianne Feinstein (D-CA) received at least $2,000 in Abramoff-linked cash.
Senator Russ Feingold (D-WI) received at least $1,250 in Abramoff-linked cash.
Senator Daniel Inouye (D-HI) received at least $9,000 in Abramoff-linked cash.
Senator Jim Jeffords (I-VT) received at least $2,000 in Abramoff-linked cash.
Senator Tim Johnson (D-SD) received at least $14,250 in Abramoff-linked cash.
Senator Ted Kennedy (D-MA) received at least $3,300 in Abramoff-linked cash.
Senator Mary Landrieu (D-LA) received at least $28,000 in Abramoff-linked cash.
Senator Pat Leahy (D-VT) received at least $4,000 in Abramoff-linked cash.
Senator Carl Levin (D-MI) received at least $6,000 in Abramoff-linked cash.
Senator Joe Lieberman (D-CT) received at least $29,830 in Abramoff-linked cash.
Senator Blanche Lincoln (D-AR) Received At Least $14,891 in Abramoff-linked cash.
Senator Barbara Mikulski (D-MD) received at least $10,550 in Abramoff-linked cash.
Senator Bill Nelson (D-FL) received at least $20,168 in Abramoff-linked cash.
Senator Ben Nelson (D-NE) Received At Least $5,200 in Abramoff-linked cash.
Senator Barack Obama (D-IL) received at least $7,500 in Abramoff-linked cash.
Senator Mark Pryor (D-AR) received at least $2,300 in Abramoff-linked cash.
Senator Jack Reed (D-RI) received at least $3,500 in Abramoff-linked cash.

Senator John Rockefeller (D-WV) received at least $4,000 in Abramoff-linked cash.
Senator Ken Salazar (D-CO) received at least $4,500 in Abramoff-linked cash.
Senator Paul Sarbanes (D-MD) received at least $4,300 in Abramoff-linked cash.
Senator Ron Wyden (D-OR) received at least $6,250 in Abramoff-linked cash.

There's also contamination of the foam inner insulator by plastic goop from
the outer jacket. If you can find non-contaminating coax, it will keep its
characteristics a whole lot longer.

The distortion analyzer has a tracking bandpass filter. I'm using the HP8903E, but for this purpose, even the 334B would do the trick. You can use the analyzer to display the signal level of the sine wave inpedentent of noise to the degree the bandpass filter can remove it. [The 8903E reads amplitude, distortion, and frequency.]

I never reached the -60db point, because the signal was lost in the noise. But you have to ask yourself, if the signal is in the noise, you do care about the rejection?

In the dark ages, I was designing switched capacitor filters for modem products. When you sold the chip as a Bell standard filter, you had to implement that exact filter. However, the reality was the noise floor and THD totally negated the effectiveness of the filter. [Power supply rejection is a factor too.] So yeah, I could attenuate the alternate (out of band) channel, but the filter noise was more significant than what I was attenuating. Once the product became integrated, nobody could see the filter implementation. The amount of filtering was reduced to a level where the alternate channel (out of band) signal level was minimum by picking a compromise between the number of poles of filtering and the noise level of the amplifiers. Less poles of filtering meant fewer all passes were required.

Now I'm not happy the noise floor of the radio crapped out at around -45db. I don't know if measuring at the line outputs would have been better. I need to do the measurement again.

It is quite possible that you can use your sound card to measure the amplitude of the signal independent of the noise. BTW, I should have mentioned I turned on the 1khz modulation on the RF signal generator.

My goal was to test a crystal filter I picked up at the flea market and installed in my radio. [A good deal at $10.] One thing I learned is the coupling capacitors make a difference in terms of the signal level. I'd have to open the radio to see what I used, but I recall if the caps were too small, the signal level was attenuated.

I've got one of each of the emergency radios from Grundig/Eton for myself and gifts for others.

For fun I put a small solar cell on one of them and plugged it into the DC port in the back. I haven't cranked the handle in several days so I guess it works. Just putting the thing near the window on on the nightstand causes the charging light to light.

Saves wear on the crank for when I really need it.

Tom

It took me all of 120 seconds to find this in the liberal Chicago Tribune:

<http://www.chicagotribune.com/news/local/southsouthwest/chi-0601110210jan11,1,5780990.story?coll=chi-newslocalssouthwest-hed>

"Kennedy on Tuesday also explained why Weller used $1,640 of his own money
to reimburse a lobbying firm where Abramoff once worked for a 1999 trip
to two Indian reservations in Louisiana and Mississippi.

"He visited those reservations at the request of former U.S. Rep. David
Funderburk (R-N.C.), and THOUGHT THE TRIBES HAD PAID FOR THE TRIP [emphasis
by clifto], Kennedy said. As soon as he confirmed otherwise, he repaid
the money from his own pocket, he said."

Here's one from liberal rag UnionLeader.com:

<http://www.theunionleader.com/article.aspx?headline=Sullivan+defends+Democrats+keeping+lobbyist%E2%80%99s+money&articleId=c0963d8c-692b-47e6-b316-f42c8053aeef>

"Top Democrats received donations from scandal-plagued Washington
lobbyist Jack Abramoff?s Indian tribe clients for legitimate reasons
and are right to refuse to give up the money, the state?s Democratic
chairman says."

I bet if I took the time to search further, which I'm not going to bother
doing, I could find *tribal* money going to Democrats via Abramoff in mass
quantities.

Note that unlike most of the Republicans involved, Kennedy and Reid have
no intention of giving the money back or giving it to charity. They're
keeping it.

Good catch! I see they also have RG-213. Just wish I could find RG-6 in a
noncontaminating jacket that wasn't a special order; I don't need five miles
of it.

(Google Translation ; 24 memories ? PLL ??)

Receiver practises color silver plated with bill-poster LCD, tuner PLL
and timer of deactivation. Characteristics: receiver 4 frequency
bands (FM/PO/OC 1 and OC 2), FM: 87,5 - 108,0 MHz, PO: 522 - 1620
Khz, OC: 2,3 - 26,1 MHz. 24 memorizings. Delivered with ear-phones
3,5 mm and satchel of arrangement. Function with 2 piles LR6 (not
provided). Dim: 111 X 70 X 28 Misters Poids: 190 G without piles.

[Piles = Batteries ??]

& Yes, probably OK fer Walking about . . .

The Drake SW8 has a front speaker and is a better receiver than either the R-1000 or R-600. An SW8 with a serial number starting with a '6' (1996) or higher (final version) goes for about $500. If that's too much, consider the Drake SW2. It doesn't have all the features of the SW8 but you still get the front speaker and a very good sync' detector. The SW2 sells for about $300. Both of these receivers are out of production so you'll have to find one on Ebay or perhaps Universal Radio.

http://www.universal-radio.com/catalog/commrxvr/0088.html

http://www.universal-radio.com/catalog/commrxvr/2222.html

BTW- The R-1000 and R-600 are not 'pure' analog receivers. They use a semi-synthesized design which generates the thirty 'Mhz' ranges with a PLL synthesizer. Each Mhz range is tuned with a conventional analog circuit.

Maybe at the playground. Scottsdale has very typical Sonoran Desert
topsoil mixed with volcanic gravel. Every place near Phoenix is like
that.

Much further back in time than that, I believe.

==========
Dr. Konig also found copper vases plated with silver in the Baghdad Museum, excavated from Sumerian sites in southern Iraq, dating back to at least 2500 BCE. When the vases were lightly tapped, a blue patina or film separated from the surface, which is characteristic of silver electroplated onto copper base. It would appear then that the Parthians inherited their batteries from one of the earliest known civilizations.

http://www.world-mysteries.com/sar_11.htm
==========

In 1938, whilst rummaging through the basement of the Baghdad Museum, Austrian archaeologist Dr. Wilhelm Konig made a strange discovery. A 6 inch yellow clay pot with a sheet copper cylinder soldered with lead tin - dating back 2000 years, this was possibly the world's first battery and an example of a neat soldering job. An iron rod holding the construction in place was corroded with acid, not a chance arrangement but an ancient electric battery.

http://snipurl.com/liz2

I did just that, but now the radio doesn't work. Did all the pop running into it when I cut the cup in half ruin the circuitry?

Will a 'Cleansing' by RadioMart restore it to it's former glory?

Well, not having experience with DRM and extrapolating my past digital
mode experience in its place certainly entails making risker
recommendation but that said my expatiation is that the most important
thing is to keep up the signal throughput through the dropouts without
saturating any of the radios circuits before all else.

A whip antenna is as minimum an antenna as you can get. They are
convenient for portable radios. A dipole is a much better antenna. The
antenna is half the receiving system you are using. The antenna captures
the radio energy and the radio uses that signal energy decoding the
modulation back to audio.

Yeah,yeah,yeah,po old dumb webtv.You can get on the msntv one plan thingy and use your computer on dial up or broadband (depending on which broadband ISP you use) at the same time and your webtv subscription service is FREE,FREE,FREE.I dont have to put up with the hassels of using a computer (athough I do own some computers) and looking out for computer viruses with webtv.Since October 15,1999 when I first got on the internet with webtv,it has been working FINE,FINE,FINE for me,me,me.I will hang with webtv for as long as webtv is still around or I croak first.
Next worst ISPs are netscape and earthlink.

rkhalona gave you the right definition of shape factor and a web page
that explains it.

BW(-60dB)
SF =---------------
BW(-6dB)

<http://www.radio-electronics.com/info/receivers/selectivity/selectivity.
php>

The audio passband is often but not always defined at the IF stage with
a IF passband filter. The -6dB and -60dB is referenced to the filter

center IF frequency of 0dB. The filter is usually symmetrical and the SF number refers to how fast the slope changes. Steeper is better. The -6dB down point is usually considered the bandwidth of the filter.

With what you have the easiest thing to do would be to use the PC audio spectrum analyzer. On a strong signal playing music use a max hold function on the analyzer software and the passband of the filter should become apparent. Look at where the high end response rolls off 6dB down relative to what looks like a flat audio spectrum from low to middle audio frequencies. Where the high frequencies roll of 6dB down from the flat audio response range will be 1/2 the filter bandwidth.

For this to work the station you have are receiving must be have a wider modulation bandwidth then you are using for an audio bandwidth filter so this may only work for narrow filters.

If this does not work well enough then you will need an RF generator that you can modulate at a frequency higher than the largest filter you want to measure and use the PC analyzer as described above.

To everyone

Stop the childish crap, stop the insulting language, stop he lies and defamery (if that's a word).

Let's get back to the business of shortwave radio - please remember that there are many many newcomers to this hobby that read this post. We don't want to turn them away from it, do we?

1392. IBOC and True Bilingualism

Newsgroup: rec.radio.shortwave
Date: 2006-01-13 06:41:10 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1137134470.493393.314560@o13g2000cwo.googlegroups.com>
Source record: 58190

IBOC AND TRUE BILINGUALISM :
[The Message is the Media and the Media is the Message]
{ True Language Equality For All - Including English Only Speakers }

What - I have always thought was interesting is that :

"IF" - Bilingual Education is so important.

"IF" - Bilingual Voting is necessary and the Law .

"IF" - Bilingual Driver Testing is Mandated and the Law.

"IF" - Bilingual (Translators) are Required in Court [.]

"IF" - Bilingual News, Information and Programming
is available via the "SAP" {Second Audio Program}
Channel on TVs for Foreign Language Speakers and is
considered necessary in a Modern All-Inclusive-Society.

THEN - On All Foreign Language Broadcast Stations
'why' is their not a "SAP" Second Audio Program
Channel on the TV for the English Speakers to be
able to Hear (in their own language) and the truly
wonderful things that the Foreign Language Station
is Broadcasting. Think of the Greater Audience
potential and the increase in Advertising Revenue
for the Station. Plus the needs of 2nd and 3rd
Generation Foreign Language Speaking Families
who's younger members may be more comfortable
listening to the Programs in English.

LAW - It ought to be a Law that in any Demographic
Market Area where 5% or more of the Population
Is English Speaking that All Foreign Language TV
Programs have an English Language SAP Channel
for the English Speaking Citizens - It's Equal Rights !

INTEGRATING - "True Bilingualism" into IBOC
Implementation on Radio : Since the new IBOC
Scheme for both AM & FM Radio allows for additional
programming content. Shouldn't All Foreign Language
Broadcasters using the new IBOC Technology be
required to have a Second Audio Program (SAP)
Translating their foreign language content into English
for that 5% of more of the English Speakers living and
potentially listening within the Radio Stations Signal Area.

The Medium is the Message" - - - Marshall McLuhan
http://www.leaderu.com/orgs/probe/docs/mcluhan.html
{ In A Modern All-Inclusive-Society : The Every Message Needs
To Be Translated Into English For All To Hear and Understand ! }

jobs, Jobs. JOBS !
Think of the Jobs potential for Bilingual Speakers when
this program of True Bilingualism is fully implemented
with every current and future Foreign Language Radio
and TV Program being Translated into English and being
available to the Greater English Speaking Audience.
Note - The FCC would have to set-up a completely new
bureau to handle the monitoring and compliance workload.

NGU,

Make your little short Horizontal Wire Antenna
into a Triangular Loop Antenna. Use the same
two anchor points as the Top Corners of the Loop
Antenna and use a Fish Weight to hold-down
the Bottom Corner of the Triangle. With 3 Yards
of Wire for the Top Side and with 3 Yards of Wire
in each of the Slanted Down Sides : That will give
you about 27 Feet of Wire in the Loop Antenna.

hope this helps - iane ~ RHF

Hi:

Radios with a KK- model number are typically from Kchibo:
http://www.kchibo.com/

I could not find the KK-C600 on their website so maybe it is a
discontinued product.

Yep, that's a very good method, thanks! To refine this, I might use a noise generator modulating a signal generator (instead of using a station music). This should show the passband nicer and more steady, I think.

I do have a signal generator, and I guess I could make a noise generator using a Zener diode followed by an amplifier. Let's see...

Thanks again.

Michael

Well I agree, but the point it is that I would like to be able to
compare my results to the actual manufactures' specifications of the
shape factor for various receivers. So if everyone defines the shape
factor as BW(-6dB)/BW(-60dB), then somehow I need to be able to
measure this. But I think I now have enough input from this group to
be able to do this. Thank you very much for your help.

Well that sucks for them. The quality was something they wanted to have very high for the product, 2395 units effected? Did they have a new guy one the line for a week, doing about 60 radios a day? I wonder the total number of E1's sold to date?

Heh, if anyone is effected and sends in their radio put some type of mark on it where only you would know where it is, see you if get the same radio back. Does anyone know if Eton has technical dept here in the states or does it go back to India?

I am going to wait another 6 months till I get one, better quality and the price should be down some.

Would it work to run a length of wire out the window & clip one end (using alligator clip) to the attached telescoping antenna of my Grundig Mini 300 (w/no external antenna jack)?

1408. (OT) Overhead powerlines/stupid transformer blown out

Newsgroup: rec.radio.shortwave

Gee boys and girls,ain't we having fun? At about 6:20 AM this morning I woked up to the sound of five loud thwap,thwap,thwap,thwap,thwap noises and I could see out those two little windows at the top of my front door what looked to me like bright flashes of light (one flash of light per thwap) flareing along the overhead power lines on my side of the street.The same thing happened about four more times but not so many thwaps.(them kids out there waiting on the school bus didn't know what to think) About an hour and ten minutes later,a guy with Entergy shows up in front of my house (the powerline pole and the transformer up there on that pole is at the edge of my driveway by the street) and he gets in that boom bucket thingy and rides up there and he ties two lines together with a strap thingy and he gets a longer strap line thingy and he ties those two tied lines to a lower line so as (far as I could see) to get the weight off of the lower line,whatever,what the heck do I know? Then he takes that longggggg fiberglass telescoping pole thingy with a hook on it and he yanks at something up there on that transformer to get all the electric power back on.He said one half of the transformer got blown out (about one half or less of the electric power in my house is out/off) and he said they are going to get a crew over here this morning (of course that really doesn't mean anything,it might be today,tomorrow,next week,or untill enough of us neighbors here in my neighborhood,on my street get to hollering loud and long enough untill they do something) (that dude seemed more interested in my little doggy squatting and peeing in my front yard than fixing the electricity) and change out that transformer.

Hello Lisa,

Yes absolutely you can try it. You even have commercial antennas that get connected to the radion with an alligator clip. You can also simply wrap the antenna wire end around the whip if you don't have such clip.

Charly

Kepner-Tregoe Problem Analysis says something changed in the production line in India.

Either with the parts or with the personnel or with the procedure. It is usually a person.
We had a problem here at work with a valve traceable to a supplier who had an untrained summer student for about a month who did not get trained on a small critical detail.

This is typical KT Problem Analysis, look for what changed on the the Time Line for this radio production

I have used this method before, and it works fine; but...

I would recommend, rather than a direct connection between *bare* wire and antenna, that the OP use *insulated* wire to wrap around the antenna, maybe 10 or 20 times in a coil...inductive signal rather than direct. While the signal strength might be diminished a *little*, this would prevent static during a poor connection, and discharges of same through the guts of the radio. One can always increase the number of wraps to increase the signal if necessary. This works well for me, and prevents damage. It may also help prevent overloading of the receiver on strong signals.

For what it's worth, there are commercial antennas that come with little inductive coils that slip over the whip - but it's cheaper and completely easy to do by hand with a plain insulated wire.

Ordinarily I wouldn't blink an eye over something like this. Recalls happen. They're a fact of life for all manufacturers. However, Eton's case is different. How many false production deadlines did they announce to their customers and the general public? Was anyone even able to keep track? If you're going to jerk your customers around in such a brazen way for close to a freaking decade, then quality control had better be A-OK when the product finally reaches the customer. So far as I can tell, Eton doesn't have one whit of respect for its customers, which is also probably why it resorts to silly tricks like E1 to sell more radios to the untutored buyer.

Common sense will tell you the same thing at considerably lower cost.
Either a bad batch of components (high on the list) or a change in
manufacturing process (much lower but possible).

Hi David,

I have been enjoying your scholarly posts for many months now.

You are a real beacon in a land of darkness.

Why don't you come over and join my forum of about 470 people. We discuss politics, world affairs, and civil rights from a factual standpoint.

We deal in fact that can be substantiated; not OPINIONS.

Here is the link for wise folks like you to join with the people who will eventually save the world from destruction:
http://groups.yahoo.com/group/the_big_picture

One thing. I want a serious thoughtful answer from all the Bush regime supporters. Here is the question I have for you?

Conservatives fined Janet Jackson and Justin over a $100,000 thousand dollars because her lovely breast was displayed at the super bowl a couple of years ago.

Conservatives wanted to destroy Michael Jackson and many wished his family would die of cacner because Michael allegedly likes to sex little boys.

Conservatives misused the impeachment process to attempt to impeach a president who has the country running smoothly and had the world liking us for the most part.

Yet conservatives seem to see nothing wrong in a president taking office by deception, running up a trillion dollar defecit that middle and lower income people will have to pay while the rich play.
He took us into an unnecessary slaughter of our own troops and hundreds of thousands of innocent middle eastern people. He is spying on the American public to shut down dissent for his devilish agenda.
He lies about nearly everything he says.

Yet conservatives love this Satanic monster.

Please tell me this... What does the Bush regime have to do... for conservatives to call for him impeachment?

Nothing more, nothing less. Don't name call, and try to dance around the question. Just answer it as honestly as you can.

I have the answer, but I want to see if anyone here knows what it is
and is willing to admit it.

Peace

From An ultra conservative who hasn't lost his mind!

You're probably okay just laying it on the ground, but if you want to
be sure, they do make a coax that can be buried. It's called
Bury-flex, # 103A. Check the site, http://www.thewireman.com Good
place for antenna supplies.

They would also have it at the Davis RF site, since they have their
name on the cable.

Mainly, I'd keep the coax connectors off the ground; that's where
water gets into cable the easiest.

Well, I think we should give Eton a little credit here. (1) They
fessed up to a problem [they did not do so with the Sat800] and (2)
they are offering make the owners whole plus provide a "premium" for
the inconvenience.

They learned from last time, so that's good.

CCRadio owners with the failing display problem would have liked
similar treatment.

They do have a lot to learn, however, about creating false expectations
with those availability dates. They'd be much better to overshoot the
date by a lot and then be hero's when the radio becomes available
"ahead of time." All those missed dates did become comical.

I hope they succeed as a company. Not many sw mfgrs remaining.

I'm not sure why the XY display, but seeing 40db is about the limit.
You really need test equipment to get any meaningful results. Network
analysers that cover a few MHz aren't that expensive. You can also just
use a RF generator and power meter, which is a cheaper solution since
you don't need phase measurements to see attenuation.

1433. Electrical "Tie Wraps" Usage Outdoors Question

Newsgroup: rec.radio.shortwave
Date: 2006-01-13 16:58:40 UTC
From: Robert11 <rgsros@notme.com>
Message-ID: <IaWdnbRg5p-kQVreRVn-pg@comcast.com>
Source record: 58231

Hello:

I expect to put up a simple receive only antenna using a fair number of
"Tie-Wraps" to hold the wire against a few standoffs and supports.

I am not sure, but I guess the HD variety, or T&Betts brand, of Tie-Wraps
are made from Nylon ?
But really not sure.

How well do these generally hold up outdoors ?

Do they become brittle and decompose (a bit) after a while and break ?

Are there better types available ?
etc. ?

Much thanks,
Bob

They get brittle eventually. The black tie wraps seem to hold up better
outdoors.

Good luck. Virtually all that press stuff went to satellite or other methods of delivery some time back.

I don't see those anymore.
I'd like to receive them too. Even just weather info.
The coast guard and similar organizations may send wx
but they seem to use sitor. I haven't decoded much
sitor yet.
There are numerous fsk signals with 850 Hz shift in
the maritime and fixed bands.
They are usually 75 Baud with some being 50 Baud.
I don't know if they are military or commercial.
They seem to be coded. An autocorrelation of
the demodulated bits is flat.

Sangean radios? Dont forget,I did once buy two of those Sangean ccrane radios.The first one was the AM/FM/Weather Band/a couple of tv channels (I am watching 007 shaken not stirred Live and Let Die James Bond movie on my Radio tv right now,well,sort of anyway) that Stupid Art Bell and Stupid George Noory sometimes tout on C to C (Art Bell and George Noory really ARE STUPID!,THE LQQK STUPID TOO!) and I sent that Sangean piece of Crap BACK to Fortuna,California and then I bought and tried out a Stupid plastic Sangean ATS (or whatever they call it) 909 so-called Stupid plastic piece of Crap radio from Stupid ccrane.I sent that Stupid piece of plastic JUNK! BACK to Fortuna,California too.Please,do not deign to sell me a Stupid radio!

The K7RA Solar Update

SEATTLE, WA, Jan 13, 2006--Geomagnetic conditions have been very, very quiet. This week has seen many periods when the K index--both planetary and mid-latitude--was zero or one. The average planetary/mid-latitude K index this week dropped from 5.4/5.1 last week to 3.3/3.4 in the current reporting period.

Of course, this low in the solar cycle, it is not surprising that sunspot numbers and solar flux also dropped. Average daily sunspot numbers declined by 35 points from last week to 14.7, and solar flux was down 7.5 points to an average of 79.4.

Over the next week expect these conditions to stay the same, with some slightly unsettled geo-activity possible January 16.

Users of Canada's Dominion Radio Astrophysical Observatory data were caught off-guard this week when our source of thrice-daily solar flux readings seemed to disappear from the net. By Googling around and using a freeware program called Xenu Link Sleuth--a handy desktop Web spidering application that you can also find via a Google search, I finally found the new home of the Current Flux Archive.

More 10 meter mail arrived this week. Glenn Stewart, N7NRA, of Mesa, Arizona, reminds us to check for beacons between 28.2 and 28.3 MHz. "If you hear beacons, there is a very good likelihood that you can raise a PSK31 contact or two by calling CQ on PSK at 28.120," he says. "If you get lucky and find half a dozen or so PSK signals at .120, and if some of them are strong, head for 28.345 - 28.350 and call CQ on phone. Chances are excellent that you'll raise a phone contact or two. The band's not dead. The problem is that everyone is listening. No one is calling CQ. Give it a try!"

Also in Arizona and on 10 meters is Hank Pfizenmayer, K7HP, in Phoenix, about 15 miles northwest of N7NRA. He said that on December 26 from 2137-2220
UTC he worked KP2L, KP4DKE, S9SS, MM0SLH, VE3FGU and ZL1BYZ on 10 meters. The next day he worked ZL2BSJ, ZL1BYZ and ZL3KR. "I listen just about every day to the 10 meter
beacons, usually a couple times at least, and it would be easier to list days that I do not hear a
beacon somewhere," he says. "I have found I can call CQ on CW for long periods with no
activity at all, even though I am hearing beacons all over the East Coast".

Bob Skaggs, KB5RX, in Santa Fe, New Mexico, says he has been listening to 17 meters later.
He observes that when local sunset occurs, the band goes dead within five minutes. "From 10
over 9 to nothing in less than 7 minutes," he reports. "Not like when the sunspot activity is high
where the band slowly fades."

For more information concerning propagation and an explanation of the numbers used in this
bulletin see the ARRL Technical Information Service Propagation page. An archive of past
bulletins is on the ARRL Web site.

Sunspot numbers for January 5 through 11 were 23, 24, 11, 11, 11, 11 and 12, with a mean of
14.7. The 10.7 cm flux was 83.4, 82, 79.2, 78.2, 77.6, 77.8, and 77.3, with a mean of 79.4.
Estimated planetary A indices were 3, 6, 5, 4, 2, 1 and 2, with a mean of 3.3. Estimated
mid-latitude A indices were 3, 6, 6, 5, 1, 2 and 1, with a mean of 3.4.

Im Hotep,

Don't blame him. I'm the one who started using that"Amerikkkan" online
several years ago.

When I use it I'm referring to the mentalities of MOST White people,
regardless of political affiliation when it comes to what they think
about African Americans, reparations, and seeing that we get our full
and just due in the United Snakes of Amerikkka! Most of you all
definitely have a White Supremacist, KKK, mentality on those subjects.

It's that sit back and do nothing mentality as long as GWb is ordering
the murder of nonwhite people that made me realize that MOST whites
are devilish in how they look at non white people.

So your question made me give you the answer to another question I
just posed on another thread a few minutes ago.

What would Bush have to do for White Amerikkkans to demand his
impeachment?

The answer is pass a law giving immediate reparations for African
Americans who qualify as I do. I have the records and newspaper
clippings speaking about how my great grandparents were slaves, also
if he began pushing the civil rights agenda also you all would get him
out of there in an instant.

As long as you see he doesn't give a damn about people of color like
MOST of you, you really don't really care how many innocent people he
orders to be killed.

I pity your soul when you have to stand before the black people who
will open "The Book of Life" on judgement day and make the decision on
where you will have to spend eternity.

Capisce?

GC - The Big Picture { for small minds } ~ RHF
http://groups.yahoo.com/group/for-small-minds/
.
GC 'you' Claim - "We discuss politics, world affairs,
and civil rights from a factual standpoint."

GC 'you' then use the term "Bush regime" - ? REGIME ?

Point-of-Fact GC : The Duly Elected Government of the
USA is Not a Regime - Show the proper Respect for the
Citizens of the USA and refer to the present Government
of the USA as "The Bush Administration" - Not Regime.

Point-of-Fact GC : George "W" Bush was Elected President
of the USA by the American {Citizen} Voters as prescribed
by the US Constitution.

CG 'you' Claim - "Conservatives wanted to destroy Michael Jackson"
All Things "Michael Jackson" are Media Events and the vast
majority of Media Personalities {News Makers} are Liberals.

CG 'you' Claim - "Yet conservatives seem to see nothing wrong
in a president taking office by deception,"
- - - CG then how can 'you' laughably claim - "We discuss politics,
world affairs, and civil rights from a factual standpoint."
- - - GC - The 2004 Elections Facts Speak for Themselves :
President George "W" Bush the Republican presidential candidate
received 62,040,610 Votes and that was 50.73% of the Total Vote
by American Citizens. President George "W" Bush {Republican}
Won with 286 Electoral Votes and John 'ff' Kerry the Democrat
presidential candidate lost with 251 Electoral Votes and received
59,028,111 Votes and that was 48.27% of the Total Vote.
http://en.wikipedia.org/wiki/U.S._presidential_election%2C_2004
GC - We The People {The Citizens of the USA}
- The Voice of The People has been Heard [.]
- The Vote of The People has been Counted [.]

US House of Representatives Election in 2004
http://en.wikipedia.org/wiki/U.S._House_election%2C_2004
Republicans with 232 Seats with 53.3%
Democrats 202 Seats with 46.4%
GC - Again - We The People {The Citizens of the USA}
- Again - The Voice of The People has been Heard [.]
- Again - The Vote of The People has been Counted [.]

US Senate Election in 2004
http://en.wikipedia.org/wiki/U.S._House_election%2C_2004
Republicans with 55 Seats with 55%
Democrats 44 Seats with 44%
GC - again, And Again. AND AGAIN !
- We The People {The Citizens of the USA}
- The Voice of The People has been Heard [.]
- The Vote of The People has been Counted [.]

GC - Did 'you' ever think that The American People (Like You)
may be just every day average Americans :
Who Love Their Country and Vote Their Hearts ?
[Their Hopes, Dreams and Prayers for a Better America - Amen.]

CG 'you' Claim - "Yet conservatives love this Satanic monster."
- - - GC - ? SATANIC ?
- - - GC - ? MONSTER ?
GC 'you' go on to say "Don't name call,"
- - - GC again 'you' are laughable in saying - "We discuss politics,
world affairs, and civil rights from a factual standpoint."

"GC" - Giacomo Casanova - It is the Will of the People -
The Citizens of America that Decide Who Are Elected Leaders Are
..... and not little old 'you' [.]

GC - Have a nice day - Unless 'you' have made other plans.
Enjoy 'your' "The Big Picture" { for small minds }
http://groups.yahoo.com/group/the_big_picture

God {Allah} Bless America and The American People - Amen ~ RHF

EXCELLENT POST!! :-)

If there were people like her/me running this country it would be a
much safer, prettier, less hatfille, violent, beastly, maniacal
country for sure.

Only the descendants of the immoral Pilgrims, and the violent,
murderous, thieving, beasts that the King of England emptied out of
his worst prisons and sent to North America, Australia, and New
Zealand get to be leaders in Amerikkka.

So I suspect the psychotic savages inpower now will continue to play
that same game until the world gets fed up with us, and decides to
blow this country off the planet. It may be sooner than most of you
arrogant turds believe.

You wouldn't let anyone enter your home and tell you how many weapons
you can have and what religion you had to be, or what form of
government you had to worhship. The countries of the world feel the
same way about Amerikkka as you would feel if some simpleminded
uneducated, violent critter like DX-Ace tried to take over your home.

Need I say more...?

The ONLY reason the radio is being recalled is because it's MUCH cheaper to
fix the radio than to have to pay MILLIONS to people for burning their house
to the ground...

What is it that our country is so frightened that we may hear that
they have to resort to jamming?

Don't they think we have enough intelligence to decide for ourselves
whether something being said is accurate, or not?

One can find correct answers to just about any question imaginable in
a few minutes, just by using Google.

I don't jam out neighbors when they are talking to me. I listen
carefully, and if what they are saying makes sense, I may adjust my
lifestyle accordingly.

If I believe that it doesn't then I avoid them altogether if I can.
However, I don't stand right in their face and try to drown them out
with my volume as they speak; which is basically what jammers of all
countries do.

Well, CODARs typically use 150 kHz or so.
That makes them kind of obnoxious.
DRM isn't typically a wide signal, is it?
Typically it is no wider than a normal AM
signal, right?

I can't say I've heard many DRM signals
on shortwave. There is one local MW AM
station that appears to be using it.
At what freq is there a regular DRM broadcast on
SW?

And I'm guessing DRM is not popular with
SWLs because unless one has a decent SNR
one gets nothing but noise?
And thus it is no good for DX?

If you're going to jerk your customers around in
> such a brazen way for close to a freaking decade

Yeah, I guess we first saw the Satellit 900 ads in, what?, the '96 Passport to World Band Radio? Then, nothing! I think that a lot of us had simply stopped thinkin' about the '900 until The Shortwave Store in Canada in 2000 or 2001 posted something about the forthcoming release of the '900.

The real buffoonery began in late 2002 when we started seeing pictures of the E1 in the couple of months preceding CES 2003. It was from there that things really degenerated with multiple, multiple missed release targets.

Of course, the '900 as designed by Grundig never saw the light of day:

http://www.satellit700.com/900/900all.html
http://www.satellit700.com/900/900lcd.html
http://www.satellit700.com/900/900label.html

The E1 is an entirely different radio altogether.

Some nice radios, but I'd say the E1 occupies a niche quite distinct
from any of these. If I didn't have an SW8, however, I would likely
make the plunge for one of those Palstar units.

Steamed about Rice, Russian pol unleashes rant
Russian pol Vladimir Zhirinovsky says what Condi needs is a man.

Condoleezza Rice might want to see if there's room in one
of those "black site" terror-suspect prisons for Russian
politician Vladimir Zhirinovsky. The wacko leader of
Russia's Liberal and Democratic Party has surpassed his
earlier screeds with a misogynist attack on our secretary of state.

Speaking with Pravda this week, Zhirinovsky chastised
Rice for calling on Russia to "act responsibly" in supplying
natural gas to Ukraine. The fascistic pol attributed that
"coarse anti-Russian statement" to Rice being "a single
woman who has no children." "If she has no man by
her side at her age, he will never appear," Zhirinovsky
ranted on. "Condoleezza Rice needs a company of
soldiers. She needs to be taken to barracks where
she would be satisfied.

"Condoleezza Rice is a very cruel, offended woman
who lacks men's attention," he added. "Such women
are very rough. . They can be happy only when
they are talked and written about everywhere:
'Oh, Condoleezza, what a remarkable woman,
what a charming Afro-American lady! How well
she can play the piano and speak Russian!'

"Complex-prone women are especially dangerous.
They are like malicious mothers-in-law, women
that evoke hatred and irritation with everyone.
Everybody tries to part with such women as soon
as possible. A mother-in-law is better than a single
and childless political persona, though."

A State Department spokesman told us
Rice would not "dignify the article with a response."

Zhirinovsky has made no secret of his insanity in
the past. Besides praising Hitler and encouraging
the use of nuclear weapons, he has advocated
Russia's invasion and "reacquisition" of Alaska.
To eradicate bird flu, he's suggested arming
every Russian and ordering them to shoot
everything with feathers

Vladimir Zhirinovsky for President 2008 !!

R6U coax made for satellite dish installations can be buried. It also has better shielding than most coax. R6U is 75-ohm but that's close enough to 50-ohm for shortwave use.

The case of Sat800 was different than the E1 recall, in that Sat 800 issues were matters of inconsistent quality, with a number of technical bugs that were worked out on the refurb table.

The matter of E1 is a safety issue. And one that occurs with increasing frequency across many electronic lines as battery technology and chemistry changes. I just got a new battery in the mail, unbidden, btw, from Delphi for my MyFi. Seems that the original battery, too, has a bit of an overheating problem, related to a series of batteries manufactured in China.

A similar recall was issued by Nikon for my DSLR battery, which was also a short run Chinese issue. Overheating and potential damage or injury, again, the case. In both cases, replacement of the battery, made in India was the solution.

A recall for Sat 800 would have made no sense. Whereas in the case of E1, a recall forestalls a number of potentially larger problems.

GC - Since 'you' choose to use Colors : White Racist
then why not - Black Racist - Red Racist - Yellow Racist
- Brown Racist - and even Purple People Eaters !

Point-of-Fact : "Racism is Racism" - Regardless what the
Race of the individual it is coming from and to which
the Race it is being directed at [.]

GC - Yes - African-Americans {Blacks} can be Racist Against :
* Euro-Americans {White People}
* Asian-Americans {Yellow People}
* Native-Americans {Red People}
* Mexican-Latin-Americans {Brown People}
* Other-Americans {People-of-Color}
* and even their fellow African-Americans {Blacks}
GC - Yes - Black-on-Black Racism based on lighter and
darker skin tones and coloring is a intrinsic part of the
mixture of African-American Racism in the USA [.]

GC - It is clear from 'your' few personal writing here on
RRS that 'you' are a Racist when it comes to "WHITES" [.]
The Hate-of-Whitee is evident in your every written word.
GC - Your Hated for America is evident by your use of the
Term AmeriKKKa and the United Snakes of AmeriKKKa;
Plus the many references to White AmeriKKKans.

GC - And Just What Book of Scripture Did 'you' Imagine this in ?
"I pity your soul when you have to stand before the black people who
will open "The Book of Life" on judgement day and make the decision on
where you will have to spend eternity."

When Each of Our Time Comes and It Will - God Will Judge Us :
And God needs no man's help to discern the full measure of our lives.

God {Allah} Bless America and All The American Peoples - Amen ~ RHF

1476. (OT) : GC - Point-of-Fact : "Racism is Racism"

Newsgroup: rec.radio.shortwave
Date: 2006-01-13 18:59:15 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1137178755.940108.3300@g44g2000cwa.googlegroups.com>
Source record: 58125

GC - Since 'you' choose to use Colors : White Racist
then why not - Black Racist - Red Racist - Yellow Racist
- Brown Racist - and even Purple People Eaters !

Point-of-Fact : "Racism is Racism" - Regardless what the
Race of the individual it is coming from and to which
the Race it is being directed at [.]

GC - Yes - African-Americans {Blacks} can be Racist Against :
* Euro-Americans {White People}
* Asian-Americans {Yellow People}
* Native-Americans {Red People}
* Mexican-Latin-Americans {Brown People}
* Other-Americans {People-of-Color}
* and even their fellow African-Americans {Blacks}
GC - Yes - Black-on-Black Racism based on lighter and
darker skin tones and coloring is a intrinsic part of the
mixture of African-American Racism in the USA [.]

GC - It is clear from 'your' few personal writing here on
RRS that 'you' are a Racist when it comes to "WHITES" [.]
The Hate-of-Whitee is evident in your every written word.
GC - Your Hated for America is evident by your use of the
Terms : AmeriKKKa and the United Snakes of AmeriKKKa;
Plus the many references to White AmeriKKKans.

GC - The Reality is that there is more African-American Racism
Against Euro-Americans Today in the USA as a Percentage of
the African-American population in the USA : Then there is
Euro-American Racism Against African-Americans Today in
the USA as a Percentage of the Euro-American population.

GC - And Just What Book of Scripture Did 'you' Imagine this in ?
"I pity your soul when you have to stand before the black people who
will open "The Book of Life" on judgement day and make the decision on
where you will have to spend eternity."

When Each of Our Time Comes and It Will - God Will Judge Us :
And God needs no man's help to discern the full measure of our lives.

God {Allah} Bless America and All The American Peoples - Amen ~ RHF

HF Guy,

For "Receive Only" Shortwave Listening (SWL) Antenna uses :
Most Quad-Shield RG6 [RG-6 / RG 6] will last as long as RG8
[RG-8 / RG 8] type direct burial non-contaminating Coax Cable.

Plus - The RG6 Quad-Shield is eaiser to find and cost about a
third-less-than the RG8 direct burial non-contaminating Coax Cable.

I use them a lot in gardening. (They're great for stopping a pinhole leak
in one of those black porous soaker hoses). The white ones, one year or
two summers at the most in not very sunny Seattle. Snap, crumble, crunch.

Black ones, especially if labeled UV resistant (or UV Black), have carbon
black or some other pigment in them and will last longer. The ones I
got two years ago at Fry's seem to be standing up better, but that's
not much of a test.

There are similarities, although not to the degree as between the SW8 and the Satellit 800. In Van Horn's E1 review in Monitoring Times, it is written that "Drake did have a major hand in the electronics of this unit."

www.monitoringtimes.com/html/mtfirstlook-etone1xm.pdf

Someone in the Yahoo! E1 group had grouped together some comparative data from the current and previous editions of Passport to World Band Radio. Perhaps you might find it interesting:

Dynamic Range/IP3 (5 kHz):

1. AOR AR7030 82 dB / +1 dBm
2. Drake R8B 75 dB / -20 dBm
3. Watkins-Johnson WJ-8711A 74 dB / -18 dBm
4. Sony ICF-2010 68 dB / -21 dBm
5. Drake SW8 67 dB / -26 dBm
6. Sony ICF-SW77 64 dB / -37 dBm
7. Eton E1XM 55 dB / -50 dBm
8. Ten-Tec RX-340 46 dB / -55 dBm

Dynamic Range/IP3 (20 kHz):

1. AOR AR7030 100 dB / +28 dBm
2. Watkins-Johnson WJ-8711A 99 dB / +20 dBm
3. Ten-Tec RX-340 93 dB / +9 dBm
4. Drake SW8 92 dB / +11 dBm
5. Drake R8B 89 dB / +2 dBm
6. Eton E1XM 87 dB / -2 dBm
7. Sony ICF-SW77 82 dB / -10 dBm
8. Sony ICF-2010 80 dB / -9 dBm

Image Rejection:

1. Ten-Tec RX-340 >100 dB
1. AOR AR7030 >100 dB
2. Eton E1XM >90 dB
3. Drake R8B 85 dB
4. Watkins-Johnson WJ-8711A 80 dB
4. Sony ICF-SW77 80 dB
5. Drake SW8 64 dB
6. Grundig Satellit 800 63 dB
7. Sony ICF-2010 62 dB

First IF Rejection:

1. Ten-Tec RX-340 >100 dB
2. AOR AR7030 95 dB
3. Drake R8B >90 dB
4. Grundig Satellit 800 86 dB
5. Sony ICF-2010 85 dB
6. Sony ICF-SW77 80 dB
6. Drake SW8 80 dB
7. Eton E1XM 75 dB

Blocking:

1. Drake R8B 135 dB
2. Grundig Satellit 800 132 dB
3. AOR AR7030 >130 dB
4. Drake SW8 125 dB
5. Watkins-Johnson WJ-8711A 123 dB
5. Eton E1XM 123 dB
6. Sony ICF-SW77 121 dB
7. Ten-Tec RX-340 109 dB
8. Sony ICF-2010 109 dB

AGC Threshold:

1. Drake R8B 0.9 uV, Superb
1. Drake SW8 0.9 uV, Superb
2. Grundig Satellit 800 0.8 uV, Superb
3. Sony ICF-2010 0.6 uV, Excellent
4. Ten-Tec RX-340 0.5 uV / 0.13 uV (preamp off/on,
Excellent/Poor)
5. Eton E1XM 0.3 uV, Good
6. Sony ICF-SW77 2.0 uV, Good
7. AOR AR7030 2.25 uV, Good
8. Watkins-Johnson WJ-8711A 0.11 uV, Poor

Phase Noise:

1. AOR AR7030 130 dBc
2. Sony ICF-SW77 122 dBc
3. Watkins-Johnson WJ-8711A 115 dBc
4. Drake R8B 114 dBc
4. Sony ICF-2010 114 dBc
5. Ten-Tec RX-340 113 dBc
5. Eton E1XM 113 dBc
5. Drake SW8 113 dBc
6. Grundig Satellit 800 111 dBc

Overall Distortion, sync:

1. Drake R8B 0.4 %
2. Drake SW8 1.2 %
3. AOR AR7030 2.0 %
4. Sony ICF-SW77 2.3 %, 3.3 % (Wide/Narrow)
5. Grundig Satellit 800 2.4 %
6. Ten-Tec RX-340 2.6 %

6. Eton E1XM 2.6 %
7. Sony ICF-2010 2.9 %, 3.5 % (Wide/Narrow)
8. Watkins-Johnson WJ-8711A 8.2 %

Max. Sensitivity:

1. Watkins-Johnson WJ-8711A 0.13 uV
2. Ten-Tec RX-340 0.14 uV
3. Sony ICF-2010 0.15 uV
3. Eton E1XM 0.15 uV
4. Sony ICF-SW77 0.16 uV
5. Drake R8B 0.2 uV
6. AOR AR7030 0.2 uV
7. Grundig Satellit 800 0.23 uV
8. Drake SW8 0.32 uV

Ultimate Rejection:

1. AOR AR7030 90 dB
2. Watkins-Johnson WJ-8711A >80 dB
3. Drake R8B 80 dB
3. Eton E1XM 80 dB
4. Ten-Tec RX-340 70 dB
4. Grundig Satellit 800 70 dB
4. Drake SW8 70 dB
4. Sony ICF-SW77 70 dB
4. Sony ICF-2010 70 dB

No doubt the safety issue is more severe than performance problems, so
I fully understand that.

Maybe "recall" isn't the right terminology to describe post-sale
corrections of known & widespread performance related problems due to
faulty design, etc. In those cases, I think the mfgr has some
obligation to make things right.

D Peter Maus wrote:

I've made attempts to hear IRIB English at 1:30-2:30 on 6120Khz and 9665Khz as listed on their schedule but haven't much luck. This is supposed to be a 500KW broadcast. Part of the problem is interference from domestic shortwave. Has anyone had any luck receiving them in English? Thanks

CharlesC

Charles.

Go to the EiBi website: http://www.eibi.de.vu/ and drill down to
their text file called bc-b05.txt

One you get that small text file downloaded on your computer, search for
irib in that file and you'll have the best answers to your question on
your screen.

Better yet, get a database management system to work on that file and
make it even easier. But if all you're interested in is the current
IRIB schedule, just get this updated file and search for what you want.

-Tim

I can't see much insanity here - I would've thought he was stating the
obvious -- although a hand grenade up the cunt followed by being booted off
a cliff might satisfy more people than just Condoleezza Rice. Just an
opinion....

I'd use a length of insulated copper wire, single or multiple strand, whatever gauge works for you, as long as you can wrap it snugly around your whip. If it tends to unwrap, a piece of tape to hold it in place won't hurt a thing. Insulation will make no practical difference in reception, will help to insulate against touching other metal, as well as give you the safe inductive coil you need at the whip. The longer the length, the more signal you will pull in - which is not always fully desirable, by the way, because a strong signal can overload the radio, resulting in reception and interference on frequencies other than the primary one.

The wire could be cut from an old extension cord, but less than about 10 feet may not help your reception much. Something around 30 feet or so might be a good place to start. Run your wire up as high as you can off the ground. Make sure you don't connect an uninsulated piece of of it to a grounded metal object. See what happens!

Any kind of electric-like/coper wire or the like will do. You can perhaps have bear for the contact with the radio (that's equivalent to having an alligator clip), or insulated wraped around the whip, as adviced by Bruce.

But the remaining part of the wire must be insulated, to prevent any electric chock that can destroy the radio and possibly hurt you.

It's best not to clip the antenna wire directly to the radio's whip antenna. Start with about ten feet of lightweight extension cord, like lamp cord. Split the cord down the middle into two wires. Use one of the wires for your antenna. Wind one end of this wire into a coil with about eight turns, which will slide over the whip antenna on the receiver. The whip doesn't have to be extended. Leave it collapsed but move it away from the radio so you can slip the coil over the whip. Better still, wind the wire coil around a short plastic tube, about 3-inches long, which fits over the collapsed whip. Wrap some plastic adhesive tape over the coil to keep it from unwinding on the tube. Try to get some or all of the antenna wire out a window to improve reception. Ideally you would connect the far end to some object like a tree or pole. In that case the antenna wire would probably have to be longer. However a long antenna is not necessarily desirable for a portable shortwave radio. Most of them can't handle a lot of signal strength from a long antenna. The symptom of too much antenna is when you hear stations on frequencies where they don't belong, especially outside the international shortwave broadcast bands. These spurious signals are being produced in the radio from too much signal strength coming from a long antenna.

Hello,

I'm currently listening to Radio Canada Int. here in Amman Jordan quiet clearly.
If you're in the US it adds some distance to Iran....

Another difference perhaps RCI antenna is oriented to feed Europe, and Jordan is
right behind. I'm not sure IRIB is broadcasting with a specific direction...

Thanks for the data; it's interesting. As you can see from above, comparing the E1 to the SW8 (the parent design, I think), the SW8 is better in every category, except for Image/Ultimate Rejection and Sensitivity (the phase noise spec is identical for both radios). Perhaps the E1 benefits from advances in low cost filters that have taken place in the intervening years.

IIRC, the SW8 cost ~$700 when it came out. The E1 at $500 is not a bad radio at all, but since I already have a bunch of better radios (R8B, SW8, Lowe 225E) I doubt I'll be getting one until after QC problems are resolved and the price drops a bit more.

Since the FCC wanted to license the CODAR stations on frequencies that wouldn't interfere with 'important' communications such as aircraft and the military, most of them got assigned to preexisting shortwave broadcasting bands like the 60-m tropical band. This was apparently not a concern for the FCC since shortwave listeners don't have any 'lobby' in Washington. The situation with BPL is much the same.

Admittedly, it can be found available for less than $500:

Buying online from J.C. Penney, it can be purchased for $419.99 (I
believe the shipping is in the realm of $30 though).

I purchased mine through Sharper Image when a 20% promo was going on.

That said, under present circumstances, I can certainly understand
putting off an E1 purchase for now.

Hello:

If I purchase a 6 foot length of 3/4 inch O.D. Copper water pipe (and drive it into the ground), would it be as effective (or better ?) than the 3/4 inch copper-plated-on-steel types they seem to sell expressly for this purpose ?

Why ?

(This would just be for grounding a Balun for a receive only application)

Thanks,
Bob

It would probably work OK, if you didn't mash it up - copper is pretty soft; that's why they plate it onto steel for pounding into ground. Why not use a rod? They're cheap enough, and most any hardware store will have 'em....

Here in Missouri I use 1/2 inch copper water pipe for ground rods.
I dig a small hole maybe 6 inches deep and pour water into it, then I start working the pipe into the ground adding water as needed to keep the pipe wet and lubed. I can usually get 8 to 9 feet into the ground with no problem.
Of course if your ground is rocky this will not work.
Being an electrician I also use this trick on regular copper plate ground rods also.

I picked up this unit about a week ago. It was ok when receiving stations, but on interstation noise with the preselector untuned, gain was low. The clue to the problem was that with AGC disabled and the RF gain control turned all the way up, the radio had higher gain than with the AGC enabled. The problem was adjustment of R507. This adjustment had probably drifted with component ageing over the years. It appears to set the knee point of the AGC. Once adjusted, the radio has the same gain in both AGC and MGC modes. I think it is the best of the German / Portugese Grundig models that I have seen. Not only does it use dual-gate MOSFETs for all of the ranges, but it also uses separate ceramic ladder filters for upper and lower sideband reception.
Somebody must have pulled out all of the stops when they designed this receiver.
The only negative point I noticed was some excess sideband noise from the synthesizer. If you tune near a very strong station, you will hear the noise floor rise up when you get within a few kHz of the station. Also, on 49M in the evening you can hear a higher noise floor.
One of these days, I will narrowband the PLL's loop filter up a bit. Not a bad design.....this one's a keeper!

So it just has to be something illegal huh? What about something immoral, or unethical?

What Clinton did was not illegal, having sex with a grown woman. Yet the Republican lizards tried to impeach him.

Don't you think it is a far more serious situation for a president to, ignore the advice of his weapons inspectors, who were on the scene, and far better trained and educated than he is, then go marauding in the Middle East making the statement that "They tried to kill my dad?"

That sounds like something very immature that a grade school mentality would say.

By the way he has done many ILLEGAL things also. Starting the Iraq attack without the approval of the United Nations is a War crime my friend.

If amerikka doesn't wake up from it's stupor and realize that the wealthy Caucasians in this country are stealing it from under your nose, there won't be any forums for discussing "Shortwave" or any other subkect.

What goes around will eventually come around.

Opinions are "beliefs or conclusions held with confidence but not substantiated by positive knowledge or proof" Opinions are fine when you are discussing sports, movies, the weather, and other trivial matters. On this forum/list/blog, when you are discussing matters of life and death, be able to support what you say with factual evidence. Saying you believe thus and so without any support won't cut it!

That is why America is so hated by the world. It is being run by a group of "C" students who prefer their opinions to reality. The diabolical results of such thinking should be obvious to all decent, high-minded humans by now.

This is not the beautiful, intelligent, but wacky Stephanie Miller show! This in NOT The psychotic, paranoid, schizoid, fact twisting, spinning and spinning and spinning around Anne Coulter, Bill O'Reilly, or the Hannity and Holmes show either. It isn't the Oprah Winfrey Show! Neither is it The Jerry Springer Show. Here you will get THE BIG PICTURE!!

Proverbs Chapter 1 verse 10 ï¿½ My sons/daughters, if the "IRAQ INVASION" supporters entice thee, consent thou not.
11 If they say, Come with us, let us lay wait for blood, let us lurk privily for the innocent without cause:
12 Let us swallow them up alive as the grave; and whole, as those that go down into the pit:
13 We shall find all precious substance, we shall fill our houses with spoil:
14 Cast in thy lot among us; let us all have one purse:
15 My sons/daughters, walk not thou in the way with them; refrain thy foot from their path:
16 For their feet run to evil, and make haste to shed blood.
17 Surely in vain the net is spread in the sight of any bird.
18 And they lay wait for their own blood; they lurk privily for their own lives.
19 So are the ways of every one that is greedy of gain; which taketh away the life of the owners thereof.

I Am A Man...,and nothing human is alien to me.

The Earth is One Great Country, and humankind it's citizens.

If you DON'T have a spectrum analyzer (most don't) or if you DON'T have expensive test gear, a decent Oscope with x-y and a sweep generator can be used as a poor man's spectrum analyzer. 50 years ago, there was no other way to do it, in fact. If you look at, say, a Hammarlund receiver manual, that's exactly the recommended way to adjust the IF filter response curve. You don't have to go down to 60 db to see a bad shape factor.

Im Hotep,

On this particular point, it is my opinion that this fellow is pretty much right on the mark. :-)

Condoleeza is a black woman who has totally accepted the brutish, lowlife thinking of rich and powerful whites. Most of her heroes are whites, everything she respects is white.

She has been terribly brain damaged by the effects of white supremacy while growing up in Birmingham.

Most of her credentials are FAKE. She is not an expert on Russia, and she doesn't speak it that well. Have you ever heard her speak Russian? Or give a lecture on C-span on Russian history.

She is one of the most mentally confused people I have ever seen. She is in the same class as Clarence Thomas, and the other mentally handicapped black Republicans.

Peace

1572. Re: (OT) : GC - Point-of-Fact : "Racism is Racism"

Newsgroup: rec.radio.shortwave
Date: 2006-01-14 04:04:28 UTC
From: Giacomo Casanova <fulfillment@charter.net>
Message-ID: <6etgs1lvvvj549d60okiki8nomkt5tbkmd@4ax.com>
Source record: 58021

RTF, please show me the post where I used the word "Racism" or "Racist". I haven't been able to find it.
Anyway, yes black people can be racist. I don't know of any andhave never met any, but if you use the term correctly to talk about people who hate another ethnic group because of their skin color, then that is a trait that belongs almost totally to Caucasians.

I normally use the term "White Supremacist"

Tolerance.org: WHITE SUPREMACY: No One Is Innocent
WHITE SUPREMACY: No One Is Innocent By Tim Wise. July 8, 2003 -- My head was
spinning, and at one point I thought I was going to be sick. ...
www.tolerance.org/news/article_tol.jsp?id=800

Blacks can't be that because they aren't white, and they aren't supreme in Amerikkka. They don't control much of anything. They don't have the power to destroy lives by the tens of thousands like powerful Whites do.

Here is an excellent explanation of what "white Supremacy" means: Take the time to learn something new and read it.

White supremacy
From Wikipedia, the free encyclopedia.
Jump to: navigation, search

White supremacy is a racist ideology which holds that the white race is superior to other races. White supremacy is most often thought of in connection with anti-black racism and anti-Semitism, though it has also been used to justify discrimination against Native Americans, Chinese, Irish, Roman Catholics, Southeast Asians, Arabs and others.

For example, politically, socially and economically, white supremacy was by and large the law of the land in the United States before and for decades after Reconstruction; the same is true of apartheid-era South Africa, and of parts of Europe at various periods of time, most notably under the Third Reich. The extent and nature of white supremacy's continuing influence in Western culture is a subject of ongoing debate. White supremacy is sometimes used in a more limited sense to indicate a philosophical belief that whites are not only superior to others, but should rule over them. White separatist and white nationalist groups often use this more limited definition in order to distinguish themselves from white supremacists.

White supremacy, as with supremacism in general, is rooted in ethnocentrism and a desire for hegemony. It contains varying degrees

of racism and xenophobia. Associations of white supremacy with ethnic cleansing and racial separation are common, but not necessarily intrinsic.

White Supremacy in the 1990s

Like bpnjensen already posted a typical ground rod is copper plated
steel. Steel for strength pounding the rod into the ground and the
copper plating on the outside for conductivity.

If you already have the pipe and the ground is soft enough by all means
use it.

If you are having trouble pounding it in one trick is to buy or thread
the pipe on the top and connect a hose to it pumping water into the
ground to soften it up.

On 7110 kHz at that time, a R. Republica broadcasts in Spanish, according to ILG, w/Cuban "bubble" jamming to block the signal's reception in Fidel's fiefdom. Did you by chance note any type of jamming accompanying the received signal?

No more RTTY news services on SW. The last people to use SW RTTY for
news was the commies, China, North Korea, Cuba and Libya were some of
the last.

Sometimes the worlds militaries broadcast non-encrypted to start up
links and some airports might have some traffic. There used to be some
weather reporting in RTTY from airports and maritime services. Hams use
it sometimes. I forget what they call the mode but there is an automatic
digital broadcasts from airliners on HF. Still some weather faxing
occurring over the air that I hear.

< Snip >

Low bands have been good and the higher bands weak on the multi-hop
signals. Winter in NA and low sun spot cycle right Ace?

Your news server has a test news group for this.

For example I'm with Pacbell so I would use pbinet.test

Just search for a news group with the word "test" in it.

Nope...

I have a feeling that the copper plating is for delaying the onset of
corrosion.

and a few hundred web sites agree with that opinion.

I don't see a Spanish broadcast on that frequency. Might be some kind of
false signal on your portable. Listen on the hour and se if you can ID
the station. You may find it is really on another frequency.

"Once worked??" Many people have visited Germany, where Hilter once
waged world war. Thus anyone who has been to Germany is a Nazi.

You can go to opensecrets.org and trace money given directly by Jack
Abramoff. Hopefull this link will do the trick:

<http://www.opensecrets.org/indivs/search.asp?NumOfThou=0&txtName=abramoff%2C+jack&txtStat
e=%28all+states%29&txtZip=&txtEmploy=&txtCand=&txt2006=Y&txt2004=Y&txt2002=Y&Order=N>

I see Tom Delay, Ted Stevens, Elizabeth Dole, Arlen Spector, etc.

I bought it originally for my son who is in the military. When he was transferred overseas he was not able to take it with him. I have bought and sold SW radios for years, listening mostly to Deutsche Welle to keep up with events in my native Germany.

Recently I started listening to web radio and found that my faithful Grundig SAT 500 is more than enough to accomodate me in that regard.

Anybody interested in purchasing this radio should know that I have a 100 % rating on eBay and that I always offer a return option (within 3 days of receipt) if not satisfied with the item, provided buyer will pay for shipping and insurance.

Thanks for looking!

Pete

1602. IBOC

Newsgroup: rec.radio.shortwave
Date: 2006-01-14 13:53:29 UTC
From: Ron Hardin <rhhardin@mindspring.com>
Message-ID: <43C9025F.6D00@mindspring.com>
Source record: 58400

Just an example of interference from this wretched IBOC, listening
to Imus on WFAN 660 NYC from Central Ohio, having nulled away the local
WXIC 660 in Waverly Ohio, and WMIC 660 in Sandusky MI

http://rhhardin.home.mindspring.com/imuscut.iboc.ram (25 seconds)

not a sterling moment in Imus but, at 22 seconds in, WSCR _670_ Chicago
flips on IBOC for the morning at 8:15am Eastern, and that's the end of
Imus on _660_.

(The glitch at 17 before that is switching the receiver from DSB to LSB, to get
rid of the 4 Hz wobble from WXIC being 4 Hz high in frequency; me being unaware
of what is coming down the tunnel in 5 seconds.)

Not that it's news to anybody, but just a recorded example at hand.

John Nichols
Fri Jan 13, 11:01 AM ET

-- It sounds as if Al Gore is about to deliver what could be not just one of the more significant speeches of his political career but an essential challenge to the embattled presidency of George W. Bush.

In a major address slated for delivery Monday in Washington, the former Vice President is expected to argue that the Bush administration has created a "Constitutional crisis" by acting without the authorization of the Congress and the courts to spy on Americans and otherwise abuse basic liberties.

Aides who are familiar with the preparations for the address say that Gore will frame his remarks in Constitutional language. The Democrat who beat Bush by more than 500,000 votes in the 2000 presidential election has agreed to deliver his remarks in a symbolically powerful location: the historic Constitution Hall of the Daughters of the American Revolution. But this will not be the sort of cautious, bureacratic speech for which Gore was frequently criticized during his years in the Senate and the White House.

Indeed, his aides and allies are framing it as a "call to arms" in defense of the Bill of Rights and the rule of law in a time of executive excess.

The vice president will, according to the groups that have arranged for his appearance -- the bipartisan Liberty Coalition and the American Constitution Society for Law and Policy -- address "the threat posed by policies of the Bush Administration to the Constitution and the checks and balances it created. The speech will specifically point to domestic wiretapping and torture as examples of the administration's efforts to extend executive power beyond Congressional direction and judicial review."

Coming only a few weeks after U.S. Representative John Conyers (news, bio, voting record), the ranking Democrat on the House Judiciary Committee, introduced resolutions to censure President Bush and Vice President Cheney, and to explore the issue of impeachment, Gore in expected to "make the case that the country -- including the legislative and judicial branches and all Americans -- must act now to defend the systems put into place by the country's founders to curb executive power or risk permanent and irreversible damage to the Constitution."

Don't expect a direct call for impeachment from the former vice president. But do expect Gore to make reference to Richard Nixon, whose abuses of executive authority led to calls for his impeachment -- a fate the 37th president avoided by resigning in 1974.

Gore's speech will add fuel to the fire that was ignited when it was revealed that Bush had secretly authorized National Security Agency to monitor communications in the United States without warrants. Gore will argue that the domestic wiretapping policy is only the latest example of the administration exceeding its authority under the Constitution.

With a Congressional inquiry into Bush's repeated violations of the Foreign Intelligence Surveillance Act scheduled to begin in February -- and with Bush already preparing to pitch an Nixon-style defense that suggests it is appropriate for the executive branch to violate the law when national security matters are involved -- Gore will articulate the more traditional view that reasonable checks and balances are required even in a time of war. And he will do so in a bipartisan context that will make it tougher for Republican critics to dismiss the former vice president's assertion that the Constitution is still the law of the land.

Former U.S. Representative Bob Barr, the Georgia Republican who served as one of the most conservative members of the House, plans to introduce Gore. Barr, an outspoken critic of the abuses of civil liberties contained in the USA Patriot Act critic who has devoted his post-Congressional years to defending the Bill of Rights, refers to the president's secret authorization of domestic wiretapping as "an egregious violation of the electronic surveillance laws."

Count on Gore, who has pulled few punches in the speeches he has delivered in recent months, to be at least as caustic.

Whatt's a CRF-230? Googling produces lots of hits for a Honda dirt bike, but not a Sony.

I ask becuase I have a Sony portable TV, model TV-520. It has a 5" screen and, if I'm guessing correctly, probably from the mid-70's. It is designed to have a 12 volt battery pack attached to the bottom. There is a four-pin AC power cord that is supposed to plug into the back of the set. I don't have that cord. The plug has a pair of fingers that I assume let you watch the TV on AC power and charge the battery pack at the same time. I further assume that if you remove the cord, switches that had been actuated by the AC power cord will be configured so that the TV will run off the battery pack.

Does that sound like the situation with your Sony? I'd like to find a cord for my TV too.

This sounds like your radio:

I was a US Army broadcast engineer at Ft Greely, AK back in the early
'70s. Our AFRN network feed came through the "White Alice" microwave
network. By the time it reached our station the level was so low that I
had to use a spare magnetic phono preamp from our old transcription
turntable to bring the feed up to line level. Before that, when they
went from network to live, or back to the network they had to reset the
levels. Repeated requests were made to fix the feed, but we were always
told that the level was ok in Fairbanks, and the problem must be on our
end of the feed because the phones worked.

Same here in Los Angeles. KTLK 1150 is completely buried in IBOC hash
from KSL Salt Lake City 1160 every morning. They should wait until
everyone is on Daytime power before allowing that crap be turned on.

Of course, the official Ibiquity line is:

- You can't get WFAN in Ohio.
- You ought to be listening to your *local* stations.
- Yeah, the program (/format) you want to listen to isn't on any of your
locals, but the John Doofus Talk Extravaganza is; isn't that just as good?
- Oh, John Doofus isn't the same thing - you really want to listen to
Imus? He'll be on one of the IBOC subchannels of one of your local
FMs. Someday. Maybe.

Some advance, huh?

I do think IBOC will eventually sell millions of digital radios.

Millions of Sirius and XM digital radios.

As I recall, the telco-techno correct language for that is: "the trouble is leaving here ok," which is used almost as often as: "trouble came clear while kicking bay."

At the worst possible price, those wide black tie wraps are only 25
cents. If you are going to make a coax balun or whatever, it makes
sense to get a tie wrap that won't bust after a year in the sun.

Due to their political contributions, Home Depot is not on the approved
vendor list.

Interesting how Dr. DaviD, Ph.D., intentionally fails to ever mention the most murderous regime of all time.
Dr. DaviD's regime has murdered more innocent victims in the last century than ALL RELIGIONS combined from the beginning of time. That regime that Dr. DaviD, Ph.D, is covertly a chairman of, is that of the Communist Party Intl. which has been fighting religion since the Red dawn of its time.

Dr. DaviD's regime exists united to this day as the Communist Party Intl also known as Neo-Communists. It covertly operates under political party names such as "Progressive" and commonly associated closely with Socialists world-wide and is now beginning to make inroads into the Democratic Party.

And one could write the same story about shoes from Indonesia, shirts from Myanmar, pants from Haiti, belts from India, row crops picked in the U.S., meals served at many a restaurant in the U.S., alpaca sweaters knitted in Peru, rugs woven in Pakistan, copper goods hammered in Turkey, etc.

That isn't new news my friend.

Google along with many many other internet sites are routinely blocked in
dictatorial regimes such as Communist China.
This "blocking" will be spreading and getting much worse soon.

> I don't jam out neighbors when they are talking to me. I listen

> countries do.

Communist China also jams by simply transmitting traditional Chinese
orchestral music on the same frequency.

I'm curious as to the why of this. Is it something particular to the theater he's in? The PX sells shortwave radios (Sony ICF-55 and JWin MX 14, certainly not in the same league as the E1XM) and boom boxes the size of small cars. I even had a Pioneer boom box that had SW (single band from 5 to 21 MHz) that I bought in the PX when I first moved to Korea.

The receiver has no impact on the frequency the broadcaster transmits
on. However, it can alter the frequency on which you receive the
broadcaster. It is not unusual for poorly designed/built radios to
receive 'images' of the broadcaster on other frequencies.

Poster didn't say it wasn't allowed. It could have simply been more
than his son wanted to pack.

The vote has been rigged since long before you were born, and we've still managed to get non-Democrats into positions of authority despite it.

I already posted two liberal rags that named a lot of Democrats involved in
the scandal. You can name all the lying liberal rags that don't mention them
as many times as you want, and it won't change that 40 out of 45 Senate
Democrats received tainted money from Abramoff.

WYFR at 100,000 watts
2200-2300 UTC
targeting Europe and Scandanavia from the location you mentioned
Information about power is available in the ILG database
http://www.ilgradio.com/ilgradio.htm
You need to request a password to download the shortwave data files, and you have to use your ISP e-mail address because the site owner rejects e-mail from web accounts like hotmail and
yahoo.
The GNPDB program available at the same site can make a useable database from the ILG data, and
the no longer supported RLDB program is an excellent resource for using ILG data.
RLDB (zipped file) is available here http://www.thiecom.de/ftp/--%3ESoftware/logbuch/win/
Thanks to junius for providing that link

1667. IRRS-Shortwave tests on Jan 15, 2006

Hi There,

we have a slight freq change for our test broadcast to EU from 1300-1400
UTC on Jan 15, 2006. All other tests will be as previously announced:

0. To Europe and NA
- 1300 to 1400 UTC
- 11510 kHz (replaces 9385) ==> 9455 kHz as backup
- 100 kW

1. To Middle East
- 1500 to 1600 UTC
- 9385 kHz
- 100 kW

2. To Europe:
- 1900 to 2000 UTC
- 5775 kHz
- 100 kW

On Monday Jan 16, 2006:

3. To NA (Sunday evening Jan 15 local time in NA) :
-0100 to 0200 UTC
-9385 kHz
-250 kW

Please send your reception reports to: reports@nexus.org.

Thank You.

Was monitoring 7270 kHz this evening from about 2320Z hearing a weak signal with music and both female and male announcers. According to Passport it should be Malaysia??? Language did not sound familiar to me but could conceivably have been a Malay or similar dialect. At 2359 heard time pips and at 0000Z it was gone.

Any ideas, thoughts?

Will we "Survive Treason From Within"?

Comment by Larry Ross, July 6, 2005

Many US commentators and groups (see listings on http://www.nuclearfreenz.org.nz) believe that George Bush and his administration have engaged in many treasonous crimes and should be impeached. These include lying extensively to get US citizens to support and fight in his illegal wars; falsifying 2001 and 2004 election results so that he, not Gore or Kerry, would be thought to win these elections; making war, murder, torture, bribery, extortion, theft; endangering the US and humanity in general; continuous new lying, as well as repeating previous lies; etc, etc)

Some believe his Administration was implicated in committing the 9/11 attacks - the new 'Pearl Harbour' called for in the neocon PNAC papers. Without 9/11, his lies and war crimes would not be possible. So far, he has got away with all these crimes, consolidated and increased his power domestically and externally. He is absolutely committed to continue these crimes, and will likely increase them. There seems to be no serious and powerful opposition from the Democrats or others, such as the mass media, to Bush's administration and actions.

Yet the problems that he and his administration have brought to the US and humanity, are extremely serious. Unlike previous political leaders, George Bush and powerful, like-minded people in his administration, have the means to destroy all of mankind many times over. Already Bush and his English poodle - Tony Blair - have each threatened to use nuclear weapons before beginning their illegal Iraq war.

They have set in motion events and an expanding, endless war, justified by a self-permissive, sustaining ideology based on lies. This poisonous mix can rapidly expand to a nuclear holocaust and precipitate human extinction. No Government or most organizations have exposed the awful, diabolically evil truths and the unprecedented nature of man's predicament today.
A few in the US and elsewhere have dared to face the appalling truths.

Even worse, and not mentioned by most commentators, is that Bush also believes a Christian Fundamentalist ideology that can view his actions as doing "the will of God, in accordance with what he chooses to regard as God's Biblical promise of a fiery Armageddon for humanity, the final battle between good and evil, and rapture of himself and other Fundamentalists directly to Heaven". Whatever thoughts, and

actions George Bush may do in this regard, are believed by millions of Americans to be "divinely inspired" and that George Bush was chosen by God to lead them at this perilous time. Bush has a core of solid domestic support and approval as well as an intimidated, fearful, ignorant or apathetic majority and a mainly "me too" Democratic 'opposition'.

His initial deceits and warmaking crimes were successful. His team were able to cheat with the electronic voting machines so he was re-elected. Even though Kerry won the presidential contest he wont expose Bush. Why?
So Bush expanded his crimes to widen and deepen the Iraq war, increase imprisonment, torturing and murder of so-called "terrorists" or other opponents, mass bombing of cities like Fallujah, extending the illegal war to neighbouring states and continues working toward a much larger war against Islam.

He also lowered the threshold for the use of nuclear weapons, trashing international disarmament treaties and
the War Crimes Court, and showed lack of concern for the dire immediate threats to and from the environment.
As an 'end times' Fundamentalist, why should he worry about the environment if the Lord (with Bush's help) is bringing on Armageddon?

All these actions indicate that Bush's belief system sustains his ability to commit the most dangerous and bestial crimes, and face the ultimate result - global destruction - with equanimity and with the certainty that it is the right thing to do, and in accordance with God's will. There is no such thing as immorality or criminality if you are doing God's will. For Bush and his fellow believers, what could be more moral and exciting than helping God bring on the Biblically prophesied nuclear armageddon, and being raptured directly to Heaven and everlasting life? It's 'end times in our times'. Bush knows he's right, so he rejects advice from eminent Republican supporters who disagree and offer him alternatives. In a saner culture people would know they are in the grip of religious madmen or those who adopt a religious ideology to justify their crimes.
To facilitate and create the right climate for these colossal crimes and discourage dissent, Bush's new mantras may be:

If you believe in God, believe in Bush - his representative on earth.
If you are patriotic, support the President in this time of war.
You are either with us, or with the terrorists. There are no other choices.
Cicero suggests what we can expect if the treason continues.

The only way for the world to survive this danger is for people to understand and face it, and join with or support those who are trying to do something about it.

1689. 2038 kHz, fsk, 170 shift, 75 Baud, who?

Newsgroup: rec.radio.shortwave
Date: 2006-01-15 04:03:59 UTC
From: "Ron Baker, Pluralitas!" <stoshu@bellsouth.net.pa>
Message-ID: <PQjyf.564$eV4.249@tornado.socal.rr.com>
Source record: 58488

There is an fsk signal that is often heard
at 2038 kHz. It is S9 in southern California,
right now at utc 2006/01/15 03:57.
The shift is 170 Hz and the Baud rate is 75.
Anybody know who the source is?

So it can be 5 to 20 kHz wide.
i.e. up to 4 standard AM broadcast channels.

>
>> I can't say I've heard many DRM signals
>> on shortwave. There is one local MW AM
>> station that appears to be using it.

Hmm. Not to many of them are good prospects to be
received in southern California.

I'm hearing something like a DRM at 2723 kHz now,
utc 2006/01/15 0414. About equal in strength with the
general S2 noise.

Thanks for the links.

Overall, reasonably accurate. However, I doubt Bush caused the 9/11 attacks. There are too many outside the beltway players. However, nobody can argue that Bush and crew did a horrible job of containing the situation. No planes broke mach. No warnings were given to planes in the air other than an ACARS message from an United Airlines employee. The garbage in the White House simply sat and watched as Rome burned. But hey, "My Pet Goat" is a heckuva book.

I figure there is a 10% chance the Bush won't step down come 2008. He'll nuke some Democrat dominated city and declare marshall law. He is already working on making Posse Comitatus null and void.

Already posted a link to a leftist news service quoting a Kennedy representative as saying they thought taking money from Abramoff was okay because they were used to getting money directly from the tribes. That means they (1) took money direct from the tribes, which was legal, and (2) took money from Abramoff, which wasn't.

Funny how you haven't asked a single question about a Republican accusee.

1706. Re: Electrical "Tie Wraps" Usage Outdoors Question

Newsgroup: rec.radio.shortwave
Date: 2006-01-15 07:49:21 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1137311360.996625.22520@g49g2000cwa.googlegroups.com>
Source record: 58255

My Thoughs about Electrical Tie Wraps :

Some are make for "Indoors Use" and some are marked for
"Outdoors Use" - So... Use Them Accordingly :o)

I have some Black ones that have a small "V" near the Head.
Could this be for "UV" - Then why not mark them 'UV" vice "V" ?

The Black ones that I have used "Outdoors" have lasted for
several years (3-5) with out any apparent failures {Breakage}
due to exposure to Sun Light.

just my two cents worth - jm2cw ~ RHF

Giacomo Casanova - So... 'you' are now on the Theme of :
Good Black Folks -vice- Bad Black People.
[The Right Kind of People -and- The Wrong Kind of People]

GC - wrong, Wrong. WRONG !

Those that 'you' Agree with are Good African-Americans
Independent - Proud - Strong - Enlightened - Empowered

Those that 'you' Disagree with are Bad African-Americans
Oreos - Trying to Act White - Toms - House {N-Word}

Can't All Black Folks Get Along and simply remember :
That Good People Can Disagree About Important Issues
and Still Be Friends !

GC - Your Stand On Public Issues and Private Matters :
Does Not Define Your Blackness or Your Fraternity with
Your African-American Brothers and Sisters.

God {Allah} Bless America and All Americans - Amen ~ RHF

Hi,
I'm still trying my new Xmas gift - can't pick up anything except
static - can get AM & FM very well, unplugged everything around me --
but nada on SW & LW, can it be a bad radio>?
Unplugged the power cord, unplugged the laptop, scanned and scanned
again...I hear static but no stations,,,
Thanks in advance
Icefish

1711. Re: (OT) : GC - Point-of-Fact : "Racism is Racism"

Newsgroup: rec.radio.shortwave
Date: 2006-01-15 09:00:42 UTC
From: RHF <rhf-newsgroups@pacbell.net>

Giacomo Casanova,

GC - The Venom that 'you' spew when 'you' use the Words :
"White Supremacy" "White Supremacist" as opposed to 'your'
claim the Blacks can not be Racist since they are not 'white'
in AmeriKKKa is about as Racist as an anyone can get.

GC - 'you' state - "Anyway, yes black people can be racist.
I don't know of any and have never met any, but if you use
the term correctly to talk about people who hate another
ethnic group because of their skin color, then that is a trait
that belongs almost totally to Caucasians."
- - - GC - Kindly Look in a Mirror and 'you' Will See a PHD
of Racist and an Inflictor of Racism on All Americans.
Note - "PHD" = Piled High and Deep !

GC - If It Talks Like a Racist !
- Giacomo Casanova - 'you' are Talking-the-Talk of a Racist.

GC - If It Walks In The Path of Racism !
- Giacomo Casanova - 'you' are Walking-the-Walk of Racism.

GC - 'you' ARE A RACIST AND LIVING RACISM [.]

GC - The Brotherhood of Man - Applies To All Men - Amen ~ RHF

God {Allah} Bless America and the Promise of American a Better
America Tomorrow and Always - amen, Amen. and AMEN ! ~ RHF

** RUSSIA. VOICE OF RUSSIA DENIES IT OCCUPIES BBC FREQUENCIES IN MOSCOW | Text of report by Russian news agency RIA Novosti

Moscow, 12 January: Russia's Golos Rossii [Voice of Russia] state radio broadcasting company has denied a newspaper report saying that the company allegedly occupied the mediumwave frequencies used in Moscow by the British BBC and French Radio France Internationale [RFI] radio stations.

"The department of shortwave and mediumwave radio broadcast schedules of the main centre for radio frequencies confirms that Golos Rossii is

not broadcasting on the frequencies used by the BBC and RFI," Yekaterina Yagunova, a public relations adviser to the chairman of the Golos Rossii state radio company, told a RIA-Novosti correspondent on Thursday [12 January].

Golos Rossii does not have a licence for these frequencies and it has not submitted a request to the federal tender commission for obtaining the right to operate on BBC and RFI frequencies. On the contrary, Golos Rossii and BBC World Service are now working on a joint project to launch FM broadcasts in Moscow," Yagunova quoted Rashel Staviska, deputy chairperson of the radio company, as saying.

"The `legal collisions' which were mentioned in the press and which led to the BBC and RFI radio stations being switched off are in no way linked to the information policy of Golos Rossii," the Russian radio company said. 1714. Building a Solid Copper Ground Pipe {Tube} with an Solid Iron Core. - Also - Water Drilling a Solid Copper Pipe for a Ground Rod.

Newsgroup: rec.radio.shortwave
Date: 2006-01-15 09:54:39 UTC
From: RHF <rhf-newsgroups@pacbell.net>
Message-ID: <1137318879.308367.126840@g49g2000cwa.googlegroups.com>
Source record: 58263

For One and All,

Building a Solid Copper Ground Pipe {Tube} with an Solid Iron Core.
[Also - Water Drilling a Solid Copper Pipe for a Ground Rod.]

Located and identify the placement of your Ground Rod.

Take a piece of Copper Pipe 8-10 Foot long.

Cut the Bottom Tip of the Copper Pipe at a 45 Degree Angle
-or- Cross-Cut the Bottom Tip about a Half Inch at 0*-180*
and 90*-270* and bend the four edges inward at an Angle
to form a Water {Cutting} Jet.

Near the Bottom about One Inch Drill a Through-and-Through
set of opposed 1/8" Holes; and then go up and Inch at 60*
and do the same; and next go up and Inch at 120* and do
the same again.

Use a common Water Hose Fitting on the Top End
of the Copper Pipe; with a Water Hose connected
to it; to Hydro-Drill the Copper Pipe into the Ground.
Turn-on-the-Water and start you Hydro-Drilling.

The Remove the common Water Hose Fitting from
the Top End of the Copper Pipe.

Note - Improving Ground Rod Conductivity :
Use a small funnel to pour a dry of wet Mixture
of : 1/2 Epsom Salt; and 1/4 Copper Sulfate and
1/4 common Iodized {Table} Salt down into the
Copper Pipe. About a Cup of two will do.
This will help the Ground Conductivity of your
Ground Rod.

* Magnesium Sulfate = Epsom Salt
http://en.wikipedia.org/wiki/Epsom_salt
* Copper Sulfate = Copper Sulphate = Blue Vitriol
http://en.wikipedia.org/wiki/Copper_sulfate
* Common Iodized {Table} Salt
http://en.wikipedia.org/wiki/Iodized_salt
http://www.saltinstitute.org/37.html

Take a Piece of Re-Bar (Iron Construction Bar)
Stick the piece of Re-Bar inside the Copper Pipe (Tube)
as long as the Copper Pipe.

You now have a Ground Rod made-up-of-a :
Solid Copper Ground Pipe {Tube} with a Solid Iron Core.

FWIW - Of course there is always the Ready-Made
Plated Copper-on-Iron Ground Rods that can be found
in most Hardware Stores.

hope this helps - iane ~ RHF

>Thanks in advance
>Icefish

There are some basic questions that apply here.

Have you tried different locations in your home?

Have you tried to operate the radio in different locations outside
your home?

Is the DX/Local switch in the DX position?

Can you connect an external antenna? The antenna is the key to most
reception problems.

Your geographical location will affect the operation of your radio.
Where do you live? In a large city? Small town? In the country?

Providing more location info will help to get a solution to your
problem.

Ciao!!

I can't remember your geographical location, but I think it was in the NE US?
You should be able to pick up a good bit of what is listed as "NA" in the "notes"
section here http://www.primetimeshortwave.com/time.html
You should also be able to get the WWV time signal as a test during some part
of the day... 5000, 10000, 15000 kHz
I'm assuming you have checked to make sure the SSB switch isn't on and you are aware
that UTC is 5 hours ahead of US eastern standard time.
Do a test using as many of the North America targets listed at primetimeshortwave
as you can. Try WWV. At night your time use earbuds and the radio's tuning knob to
scan 1 kHz at a time through the 49, 41, 31 and 25 meter bands.
If you don't hear anything assume the radio needs replacing.

Source record: 58268

I have had both of these radios for over a year and I wanted to post some comments on the two.
The FR 200 , though analog, has been a great workhorse for me. Since it is a fairly cheap radio cost wise I am not afraid to carry it around, and the emergency light it has on it DOES come in handy. I lost my power several times and I have used the light. Also, it is good in a dark cellar to read the meter. Reception is decent, no DX machine but it does pull in well. FM band is more than adequate. AM is ok. Better than some real cheap radios. Good buy as a utility radio. Good for camping also.
Degen 1103......first super sensitivity. Better than my old Grundig 400. Some overload on FM. Only major complaint is the radio has to have a special convertor for electricity since it was built for overseas. It is better than Grundig 400 for reception, but again the adaptor issue may turn some people off.

icefish..

- You don't mention going over to a window at night, sticking the whip outside and tuning around..

Try at 5.000 Mhz and SLOWLY start tuning towards 7.000Mhz

> Thanks in advance
> Icefish

Icefish . .

- WHat are you fishing for ? where are you??

Take your radio outside when you go.. go to a small park..

attach 20 feet of wire to the whip and tune around

You'l catch somehting..

Well, when I lived in West Covina as a kid, I distinctly remember getting called "honky motherf--ker!, cracker motherf--ker!, white trash motherf--ker! many times and you know exactly what their saying when five or six of them are kicking your ass! Racism goes both ways Giacomo.

P.S. I remember when Alex Haley's Roots came out in the 70s. Blacks that I was friends with all the sudden hated us and I learned one thing- If you keep bringing up racism it will keep living like watering a weed.

Regards
B.H.

I always liked her on talk shows. The best, or weirdest at least, thing she did, was not even recognize her ex husband Tony Franciosa sitting next to her. That was great..

"I know you from somewhere!"

"Umm, I used to be your husband!"

"OHHHH!"

Oh, I remember you now. You are the person that thinks that by simply
ignoring the historic reality of China that Taiwan will some how morph
into an independent country. Fact is that Taiwan has been truly
independent for only a very short while. And the other fact is that
Taiwan and China are NOR going to be separated.

1735. Re: Kenwood R-600

Newsgroup: rec.radio.shortwave
Date: 2006-01-15 16:45:50 UTC
From: dososaurus@bellsouth.net
Message-ID: <2%uyf.136473$k76.71776@bignews6.bellsouth.net>
Source record: 58286

In the original post about the R-600, we did not learn which types of broadcasts were expected to be enjoyed most often by that Kenwood bedside radio. I would tend to guess that we're dealing with a program listener here, since he says he likes the sound with the 12 KHz filter and the 6 KHz one is acceptible. That does not sound like a utility chaser, or even a dedicated ham coms listener to me.

So, now for the two radios under discussion, I currently own an R-1000, and I have had and enjoyed having, a Kenwood R-600.

I liked the R-600's metal cabinet. It's an aesthetic preferrence, I just like wood and metal better than plastic, especially for a bedside or table radio that is not going to be expected to operate out and about and on the go most of its life.
The R-600 does have a front-mounted speaker which lives behind the sturdy plastic slats of its grille cover. NOw, if my memory serves me correctly, the R-600 is just a little taller than the R-1000, and its speaker is considerably smaller than the nearly five-inch diameter round one on top of the R-1000. It has a much narrower audio range, highly favoring the trebble end of that range, and that speaker is served by a less powerful, less punchy amplifier. Even with the top-firing speaker, that R-1000 will do more right by the folk music from the Voice of Greece and the Voice of Turkey than will the speaker/amplifier combination in the R-600.

The controls on the two radios are remarkably similar. The have about the same tuning knob, 1MHz-step band selector, same types of switches for wide and narrow filter selection, same volume and tone controls. R-600 claims tripple conversion super-het circuitry, R-1000 has double-conversion.
R-1000 is much more stable than the R-600, which is especially important when you do want to hear hams comparing the local weather across the world, or when you are trying to hear an interesting program on a weak signal right next to the strong signal in a language you don't understand.
That's partly because the R-1000 has more and better filters than has the R-600. The R-600 was positioned as a step up unit from the R-300, with the R-1000 being something like Kenwood's lowest-level consumer/professional receiver.

You can see information on both the R-600 and the R-1000 as well as that R-300, at:
http://www.dxing.com/
under the "modern shortwave receiver survey" section.

I'm not sure exactly where they got some of those prices they say were the original retail price range for some of those units, because I remember most of them being considerably higher. For example, I remember the Yaesu FRG-7 selling in the late 1970's for between

$650 and $750, not the $300-400-something listed at dxing.com .

You can go down to your local Radio Shack and get one of those external speakers in the heavy metal case about 5-inches wide and about 8 inches high, with the separate woofer and tweeter. Get a cord with bear leads at one end to connect to the spring-loaded clips on the speaker, and plug the 3/8-inch "mini" jack on the other end into the external speaker jack on the back panel of the R-1000. Set that speaker on top of the R-1000, aiming its mouth in the direction where you want the sound to go. I think you'll like the results, and for around $40 bucks or so, you get a front-firing speaker system far superior to the speaker already in the R-1000 or the squeaker in the R-600, and somebody not quite as far along in the shortwave listening hobby can enjoy that R-600 and have a very nice little starter radio, or even first step-up radio, and you will overcome your only serious objection to your R-1000.

Hello:

Interested in trying to hear some additional "utility" type of stations.

Am thinking ofpurchasing the new Klingenfuss Guide To Utility Radio Stations book, but it's a bit pricey.

Anyone have it ? Opinions on ?

Also, their Super Frequency List CD apparently also has utility stations listings.

Is this pretty much the same utility listings as the book mentioned above ? Different in which way ?

Thanks,
Bob

Are you seriously trying to equate an American farmer sitting on valuable real estate and capital assets to a Chinese peasant with little to no education, who owns absolutely nothing thanks to land confiscation by the CCP
in China? - LOL

> Should we therefore Ban Family Farms and Small Businesses ?

Family farms are run by capitalists who purchase, own their "business" and have rule of law to back up contracts. They choose to farm and actually enjoy farming, their self determination and business "ownership". Your logic has collapsed. See above. I suggest you read a fair bit more about the history and current plight of dirt poor peasants in China and how they have been economically raped and murdered since 1949!

> Should we Boycott Food from our own US Family Farms ?

Should we boycott the Ford motor company because Henry Ford worked long hours to make his business?

> Should we Boycott Small Independent Business ?

Should we boycott the corner dunkin-donut shop?

As you continue to whistle in the dark, the bogeyman will continue to become successful. Remember it is China that is hosting the 2008 Olympics and it is China that is emerging as an economic shperpower that dwarfs it's island neighbor. The ONLY way that Taiwan will succeed in the long run is to remain a part of China, and it's leaders have recognized this reality. And as I think about it for a moment, Taiwan was in the post WWII era an independent country only because the U.S. needed a democratic (well, at least non-communist) ally in the asian theater cold war. Beginning with Kissinger in the 1970's the U.S. has been backing away from that relationship.

That's an interesting and comprehensive comparison of two classic
receivers, thanks for posting it.
Although I have not had the opportunity to use either of those Kenwood
receivers, I have used both a Kenwood R300 and Kenwood R5000. Although
the contrast between those two receivers is certainly great, I would
have to say that I enjoyed tuning around on the R300 and it would catch
a lot of stations. Sitting at that dual drum receiver one could
imagine that it was an old glow-in-the-dark tube radio for at least a
moment. OTOH, the high-performing R5000 is an example of how quickly
receiver technology changed and how much receiver performance improved
within the short space of one decade.

In a contraction, you don't capitalize the first letter, hence it would be 'tard and not 'Tard. Please stop soiling yourself in public, DxAss.

I will admit that your performance in Brokeback Moutain was exceptionally good, but then it came naturally to you.

Good evening Hank,

You can see the description in a previous post (3 days ago)...

Any here is it again. Once I get home I will put some pictures on-line ;-)

Charly

You need :
- coax feed line maid out from a piece of TV coax
- two thin wires, one connected to the center line of the coax,
the other connected to the shield (at the same end of the coax).
- a suitable connector to your radio (1/8" mono jack for my Sangean)
connect coax center wire to connector tip, coax shield to the
connector ring, at the opposite end.

You extend the two wires in opposite directions and it makes a portable random dipole. Mine is about 5m fully extended, just because I had this length of wire. No computation or studies to match specific frequency or having right impedance. In buildings made of iron structure, I put it on a window with adhesive tape, or let it hanging outside, trying to keep the two wires apparts.

This greatly improved my reception on all bands. I must say I tried mainly in the lower bands in frequency (F <= 15000 kHz) since I'm mostly listening at night. MUCH BETTER than the piece of random wire I tried in the same conditions.

Well, let's examine this. First thing we see is "coincidence theorists".
EUPHEMISM ALERT! Obviously this means conspiracy theorists, but tries not
to have the pejorative sound. Kinda like liberals calling themselves
"moderates". Anyway, just for the hell of it, let's take a look.

Start at the base URL. Note big story on astral projection, occasional
Bush-bashing and conservative bashing. "extrordinary 'hyperspace' engine
that could make interstellar space travel a reality by flying into other
dimensions is being investigated by the United States government."

Oooooookay.

Now, off to the given URL. Did you notice that Mohammed Atta lived his
last days in the same country where Gene Autry lived his last days? Do
the coincidences between the Lincoln assassination and the Kennedy
assassination demonstrate that the same parties orchestrated both?
And why do they call it a sandwich when it is neither sand nor witch?

Whew. Thank goodness the wife heard me ranting and whacked me over the
head with a bat. I was just about to make a thermonuclear warhead from
peanut butter, PopTarts, diatomaceous earth and used snow tires.

Lisa,

Could your rcvr be off frequency??? During the time period of 2000 to
2100 hrs Radio Portugal is on the air with sports programs-Soccer games in
Portuguese. The two frequencies that they use are 15540 to the Americas using
100kw and also 15555 from 1400 to 0000 hrs at 100kw to the Americas. I hear
them often with broadcasts of Soccer games. Good Listening and
DX!!!

1779. OT Security funding abuses: This is hilarious

Newsgroup: rec.radio.shortwave
Date: 2006-01-16 00:44:05 UTC
From: m II <None@telus.ca>
Message-ID: <p%Byf.83955$AP5.25391@edtnps84>
Source record: 58329

Last month, Town Supervisor Josh, with powers granted him by the Department of Homeland Security, declared a "national security emergency." (Supervisor Josh Horton is called by his first name because he was elected at the precocious age of 26 -- based, it seems, on his stellar qualifications: he wears shoes.) In light of the clear and present threat of attack, Supervisor Josh ordered every one taking the ferry boat to the Indian casino to park in the dirt lot across from the Country Store and not along Route 25. Image

It was just after the London bombings and Supervisor Josh insisted this was truly a matter of preparing for terrorist attack, though some locals suspected it was less about Al Qaeda and more about zoning. Supervisor Josh had been trying all year, unsuccessfully, to change the zoning on the dirt lot next to the ferryboat launch from "farming" to "parking" to boost the town's take from the inebriated gambling tourists. To scare off both Al Qaeda and parking violators, Josh has posted, care of the federal treasury, an SUV at the ferry dock armed with two .50-caliber machine guns. I kid you not.

The ferry to the Indian casino is our officially designated town "terrorism vulnerability point" (TVP). If you don't pick a "terrorism vulnerability point," the town can't get its slice of Homeland Security loot from the federal government.{mosgoogle right}

All ferry passengers are now asked for their home phone numbers, though if they are suicide bombers, they will not, after they strike, be able to answer the phone. No matter.

Homeland Security assigned three guardsmen, armed and armored, to the Vulnerability Point because the town police are a little shorthanded since the crime wave in the hamlet of Greenport a couple years back. It involved some petty theft, racial slur complaints and baggies of pot sold. The crime wave ended when the village disbanded its minuscule police force -- which had committed all the crimes.

People can send their recalled receivers back to Eton and get them back
in just two weeks!

Well, make that three weeks.

No, let's say four weeks, and that's definite!!

Okay, it'll be at least five weeks, but it'll seem like four.

Otherwise, you can expect to get your receiver back in seven weeks.

So don't use Google Video.

Any good search engine should handle "two chinese students" and I've
seen this in a bunch of formats, including QT.

How can you be sure it not a sixty five year old man, such as yourself,
pretending to be a woman, as you do at times using one of your many
false identities?

Inquiring minds would like to know.

mike

1786. Enquiry about Sangean world radio receiver ATS 606

Newsgroup: rec.radio.shortwave
Date: 2006-01-16 03:28:48 UTC
From: globetrotter@www.com
Message-ID: <1137382128.897562.94430@g44g2000cwa.googlegroups.com>
Source record: 58336

Hi,

I have a Sangean ATS 606 world radio receiver which was purchased in 1993. The AC-DC adaptor was spoilt years ago and it has been operating on 3 AA batteries ever since. It operates on a power input of 250mA on 4.5V. Recently I purchased a univeral AC-DC adaptor with a maximum current output of 500mA. However it can't seem to work with my radio. The battery compartment gets hotter, but otherwise - nothing happens at all.

I'm not sure whether my radio or the adaptor is faulty. Does anyone have advice for me? I can't locate a Sangean service centre here in Singapore and the electronics shop where I bought the radio from, closed down many years ago.
